

# CONSUMER PRICE INDEX

(Base period: January – December 2012 = 100)

Year 2016

## 1. INTRODUCTION

This issue of Economic and Social Indicators presents the Consumer Price Index (CPI) for the year 2016. The methodology used for computing the CPI and the inflation rate is given in the technical note at Annex.

## 2. KEY POINTS

### 2.1 The overall CPI

The Consumer Price Index, which stood at 106.9 in December 2015, registered a net increase of 2.5 points (or 2.3%) to reach 109.4 in December 2016 (Table 1a).

The monthly CPI changes in 2016 are shown in the chart below. Increases were noted in the months of January, February, March, June, July, August, September and November and ranged from 0.1 to 1.8 points with the highest increase in the month of February 2016. On the other hand, decreases which ranged from -0.5 to -2.0 points were noted in the months of April, May and October, with the highest decrease in May 2016. The CPI for the month of December 2016 remained unchanged.

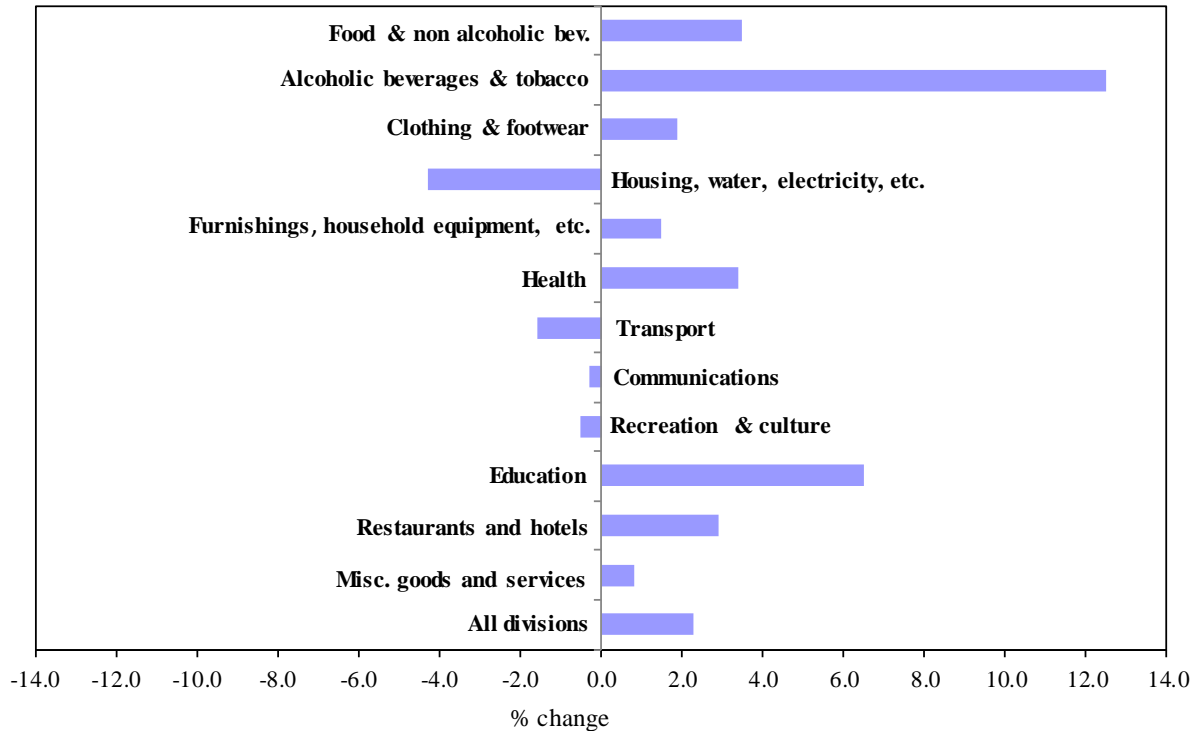

### 2.2 Overview of CPI movements

The main reasons for the net increase in the CPI during the year 2016 (Table 2) were:

- (a) higher prices for vegetables, meat, fish, fruits and some other food products;
- (b) higher prices of cigarettes, rum and other cane spirits, and beer and stout;
- (c) higher prices of footwear;
- (d) higher doctors' fees;
- (e) higher fees for university and secondary tuition;
- (f) higher prices in bars and restaurants;
- (g) higher prices of some other goods and services;  
partly offset by
- (h) lower prices of traders' rice, milk, cereals and ginger;
- (i) lower prices of cooking gas and electricity rates;
- (j) lower interest on housing loan;
- (k) lower prices of gasoline and diesel and
- (l) lower prices of information processing equipment.

### 3. MOVEMENT OF CPI SUB INDICES

#### Percentage change in CPI sub indices for year 2016

The changes in the sub-indices (Table 3) for the twelve divisions of consumption expenditure during the year 2016 were as follows:

*Food and non-alcoholic beverages (+3.5%)*

The increase of 3.5% was mainly the result of higher prices of vegetables (+17.4%), meat (+3.4%), fish (+7.2%), sugar (+16.6%) and soft drinks (+4.5%), partly offset by lower prices of traders' rice (-6.8%), milk (-4.2%), cereals (-12.9%), ginger (-30.5%) and pulses (-7.1%).

*Alcoholic beverages and tobacco (+12.5%)*

The increase of 12.5% was mainly due to price increases of cigarettes (+17.5%), rum and other cane spirits (+12.0%), and beer and stout (+3.1%).

*Clothing and footwear (+1.9%)*

The increase of 1.9% was mainly due to price increases in footwear (+5.5%).

*Housing, water, electricity, gas and other fuels (-4.4%)*

The decrease of 4.4% was due to lower prices of cooking gas (-18.2%), electricity rates (-2.0%) and interest on housing loan (-6.1%).

<i>Furnishings, household equipment and routine household maintenance (+1.4%)</i>	The increase of 1.4% was mainly due to higher charges for domestic services (+3.6%) and higher prices of furniture (+1.2%).
<i>Health (+3.4%)</i>	The increase of 3.4% was mainly the effect of higher doctors' fees (+6.5%).
<i>Transport (-1.7%)</i>	The decrease of 1.7% was mainly due to lower prices of gasoline (-6.0%), diesel (-9.9%) and air tickets (-3.0%).
<i>Communication (-0.3%)</i>	The decrease of 0.3% was mainly due to lower prices of mobile phones (-8.7%).
<i>Recreation and culture (-0.5%)</i>	The decrease of 0.5% was mainly the result of lower prices of information processing equipment (-11.3%).
<i>Education (+6.5%)</i>	The increase of 6.5% was mainly the effect of higher university fees (+3.5%), and higher school and tuition fees (+9.4%).
<i>Restaurants and hotels (+2.8%)</i>	The increase of 2.8% was mainly due to higher prices in bars and restaurants (+5.9%) and prepared foods (+1.3%).
<i>Miscellaneous goods and services (+0.8%)</i>	The increase of 0.8% was mainly due to higher prices of goods for personal care (+0.9%) and higher hairdressers' fees (+4.1%).

#### **4. INFLATION RATE**

The headline inflation rate decreased from 1.3% in year 2015 to 1.0% in year 2016 (Table 5), the lowest rate since year 1987 (0.6%).

The headline inflation rate excluding 'Alcoholic beverages and tobacco' decreased from 1.2% in year 2015 to 0.2% in year 2016.

## 5. INTERNATIONAL COMPARISON OF INFLATION RATE

The table below compares the inflation rate (as measured by the percentage change in the average CPI for a given year relative to the previous year) of Mauritius with those of our main importing countries and some countries in the region for 2015. It is to be noted that inflation rates for 2016 for the selected countries are not yet available.

### Inflation rate (%) of selected countries, year 2015

Country	Inflation rate (%)	Country	Inflation rate (%)
France	0.1	Australia	1.5
United Kingdom	0.1	United States	0.1
China	1.4	Botswana	3.0
India	4.9	<b>Mauritius</b>	<b>1.3</b>
Japan	0.8	Seychelles	4.0
Singapore	-0.5	South Africa	4.6

<sup>1/</sup> *The CPI for January 2008 to March 2013, originally based on July 2006-June 2007, has been converted to the new base January - December 2012=100 using a linking factor of 1.33. Example: the monthly CPI for January 2013 has been converted to the new base by dividing 135.7 by 1.33 (=102.0)*

**Table 2 - Net contribution of main commodities that affected the index from December 2015 to December 2016**

<b>Commodity</b>	<b>Contribution to change in overall index point</b>	<b>Percentage change in price index</b>
Vegetables	+ 0.8	+ 17.4
Fish	+ 0.2	+ 7.2
Meat	+ 0.1	+ 3.4
Rice	-0.1	-6.8

## Technical note

### 1. Methodology used for the computation of the Consumer Price Index (Base period: January - December 2012 = 100)

#### (a) Definition

The **Consumer Price Index** (CPI) is an indicator of changes over time in the general level of prices of goods and services acquired by Mauritian consumers.

#### (b) Measurement of the CPI

The CPI measures price change by comparing, through time, the cost of a fixed basket of goods and services. As prices vary over time, the total cost of the basket also changes and thus the CPI measures the change in the cost of this basket. It provides a way to compare what this basket costs at a given period relative to a reference or base period.

The cost of the CPI basket is assigned a value of 100 in the base period and the costs in other periods are expressed as percentage changes compared to the base period. For example, if the CPI is 110, this means that there has been an increase of 10% in the cost of the basket since the base year; similarly an index of 90 means a 10% decrease in the cost of the basket.

#### (c) The CPI basket

The CPI basket is based on the expenditures of private households in a reference period, currently January to December 2012. The composition of the current CPI basket has been derived from the 2012 Household Budget Survey (HBS) data. It has been determined in accordance with latest ILO and SADC recommendations.

The items constituting the basket have been selected on the basis of the importance of household consumption expenditure on them. The basket includes all important items on which consumption expenditure is significant, i.e. accounting for around 0.1% or more of total household consumption expenditure. Each item's relative importance, which is called the "weight" (usually expressed on a total of 1000), is the expenditure share of the item. Non-consumption items such as income tax, social security contributions, purchase of land, shares and life insurance are excluded.

The commodities in the basket are classified according to the UN COICOP (Classification of Consumption Expenditure according to Purpose) with 12 divisions, 42 groups and 80 classes.

**(d) Price coverage**

The prices used in the CPI calculation are those that any member of the public would have to pay to purchase the specified goods or services. Any taxes on products attached to the goods are included.

Price collection is done on a regular basis. Each month, around 7,800 price quotations are collected in respect of 1,020 item indicators from some 500 outlets selected to be representative of regions across the islands of Mauritius and Rodrigues.

Prices of non-perishable items are collected monthly in the nine geographical districts of the island of Mauritius and in Rodrigues.

Prices of fresh fruits, vegetables, meat and fish are collected on a weekly basis from 9 markets in Port Louis, Rose Hill, Quatre Bornes, Vacoas, Mahebourg, Flacq, Goodlands, Pamplemousses and Port Mathurin.

Information on rent is obtained from a quarterly rent survey of some 100 rented dwellings.

**(e) Formula for computation of the CPI**

The CPI is computed according to the Laspeyres Formula as a weighted average of price relatives of individual items. The weights are fixed and correspond to the base period expenditures. The Laspeyres Index measures the cost of a basket of goods and services at different points in time, relative to the cost of the same basket in the base period.

The formula used for computing the CPI at time  $t$  is

$$I_t = \frac{\sum W_i (P_{it} / P_{i0})}{\sum W_i} \times 100$$

**where,**

$I_t$  : CPI for period  $t$  with reference to a base period 0

$P_{i0}$  : Price of item  $i$  at time 0, i.e. during base period

$P_{it}$  : Price of item  $i$  at time  $t$

$W_i$  : Weight of item  $i$

The base period is January to December 2012, the period during which the latest HBS was conducted.

## 2. Inflation

### (a) Definition of Inflation

Inflation is the percentage change in the level of prices (as measured by the CPI) from one period to another.

### (b) Calculating the Inflation Rate

The headline inflation rate in Mauritius, like in many other countries, is calculated by using the annual average method, i.e. by comparing the average level of prices during a twelve-month period with the average level during the corresponding previous twelve-month period. This type of inflation rate is more appropriate for adjusting wages, salaries and pensions to compensate for loss of purchasing power. *All inflation rates presented in this publication relate to the headline inflation.*

Another commonly used method of calculating the inflation rate is the so called ‘year-on-year’ method. The year-on-year inflation rate is calculated as the percentage change in the CPI for a given month with respect to the CPI for the corresponding month of the previous year. It is generally used by central banks for monetary policy decisions. Year-on-year inflation rates are not presented in this publication but can be easily calculated through the available monthly CPI.

Note: More information about the concept, computation and use of the CPI is available online in the publication “HBS 2012 and updated CPI”.
