Appendix : Housing Census Schedule

pocket in
back cover

Introduction

1. General

This report is the fourth in the series published on the 1972 Housing and Population Census of Mauritius. It presents the final results of the Housing Census of the island of Mauritius.

With the large amount of data available from the census, it is considered necessary to compile them in separate volumes for ease of reference. The data on housing and population for the island of Rodrigues have been published in a separate report. Those on population for the island of Mauritius will be published separately.

2. Historical background

Census taking in Mauritius dates as far back as the 18th century. The first complete census of the island of Mauritius, then known as Isle de France, was taken in 1735 under the governorship of Mahé de Labourdonnais. Since then numerous complete censuses or partial counts of the population have been made. Manuscript results of two complete censuses taken in 1776 and 1786 are still extant and are preserved in the Archives of the Ministère de la France d'Outre-Mer, in Paris.

The first census report to be printed was probably that of 1846, but no copy has been traced in Mauritius. For all subsequent censuses, copies of printed reports are kept in the Archives of Mauritius.

The 1846 census was followed by that of 1851. Since then, up to 1931, censuses have been taken every ten years. With the outbreak of the second world war, the one which was due in 1941 had to be postponed to 1944. As from 1952, censuses have again been taken every ten years.

3. A joint housing and population census taken in two rounds

The 1972 census was a joint housing and population census but was taken in two rounds. Two separate schedules were used and subsequently the two sets of data have been matched by computer.

The housing census was taken at the first round between the 15th March and the 15th June 1972. It was followed by the population census at the end of June; census night was the night of the 30th June to 1st July 1972.

For the housing census, all buildings were visited. Information was collected on the structural characteristics of those that served wholly or partly for residential purposes. Further, to determine the housing conditions under which the population was living, information was recorded for each set of living quarters identified on the number of rooms, the availability of facilities such as toilet, bathroom and kitchen and on the provision of water and electricity.

At the housing census, a list of all heads of households was drawn up. The list served as frame for the population census and a separate questionnaire was used to collect demographic, economic and social data from each household.

4. Legal basis

The census was taken according to provisions laid down in Ordinance No. 11 of 1951 (the Statistics Ordinance). The questionnaire used for the Housing Census was prescribed in regulations published in Government Notice No. 31 of 1972 and that for the Population Census in Government Notice No. 44 of 1972.

5. Recommendations of the United Nations

The recommendations made by the United Nations in statistical papers "Principles and Recommendations for the 1970 Population Censuses" (Series M No. 44 and 45) have been followed as far as possible. The concepts and definitions published in these papers have been extensively used, with only slight modifications where necessary, to suit local conditions.

The concepts and definitions used for the housing census are published at pages 1-3.

6. International classifications used

The International Standard Industrial Classification of all Economic Activities (ISIC) - Series II No. 4, Rev. 2 Add. 1 - has been used to classify the branches of economic activity in which the economically active persons were engaged.

Occupations have been classified according to the International Standard Classification of Occupations (revised edition, 1968) of the International Labour Office.

7. Financial and technical assistance from the United Nations

The United Nations Fund for Population Activities kindly accepted to finance part of the cost of the census. It has contributed towards the rental of the computer, the cost of punch cards and other supplies for the computer, the salaries of a systems analyst and of punch and verifier operators. It has also financed the assignment of a demographer to assist in the evaluation and analysis of the census data.

Mr. Z. Rajakovic, Regional Adviser in Demographic and Social Statistics of the United Nations Economic Commission for Africa and Mr. P. G. Bantegui, Population Programme Officer of the United Nations Development Programme gave very useful advice on the planning and conduct of the census during their respective visits to this country.

The taking of the housing census

8. Division of the country into enumeration areas

The island of Mauritius was divided into 21 census districts and the island of Rodrigues was treated as one census district.

Census districts were subdivided into enumeration areas with approximately 400 to 500 households. There were thus 370 enumeration areas for the island of Mauritius and 12 for Rodrigues.

For urban areas, the delimitation of enumeration areas was done on the latest maps that were available from the municipalities. For rural areas, the 1: 25,000 map of the Ministry of Housing, Lands and Town and Country Planning was used.

The list of electors of the Electoral Commissioner's Office was used for the sub-division of large rural localities or the grouping of the smaller ones into enumeration areas with the adequate number of households. Some reconnaissance work had to be done before the final limits of each enumeration area could be established.

9. Field staff

Each of the enumeration areas was covered by a chief enumerator. Each census district was under the responsibility of a supervisor who also had to train his chief enumerators. Four senior supervisors and one deputy census commissioner controlled the whole operation and supervised the training of the staff.

10. Period of enumeration

The housing census commenced on the 15th March 1972. By the end of the following month, a large number of enumeration areas had been covered. The census was completed by the 15th June of the same year.

11. Unit of enumeration

In order to study the housing conditions of the population, the principal unit of enumeration used in carrying out the housing census was "living quarters" (as defined in section 5 page 2).

As our interest lies mainly in the housing conditions in which people live more or less permanently, the analysis of living quarters is restricted to those being used as principal residence (see section 9 page 2) at the time of the census.

12. Coverage

Since as part of the housing census operation it was necessary to inquire about all buildings defined in section 1 page 1 (both residential and non-residential) in order to ascertain whether they were occupied as living quarters or not, it was found convenient to enumerate:-

- (i) all buildings used at the time of the census for residential, commercial or industrial purposes or for the provision of services;
- (ii) vacant buildings intended to be used for residential, commercial or industrial purposes or for the provision of services;
- (iii) all structures not intended for the uses mentioned in (i) and (ii) above, but used as such at the time of the census;
- (iv) improvised temporary structures inhabited at the time of the census;
- (v) buildings under construction.

Thus, the following were not enumerated:-

- (i) all buildings used for agricultural purposes or for livestock keeping;
- (ii) improvised structures not used for habitation, or for commercial or industrial purposes, or for the provision of services;
- (iii) buildings which were uninhabited, being totally uninhabitable as a result of complete dilapidation and buildings that were being demolished or were awaiting demolition.

13. Topics covered by the census

The following topics were covered at the census:-

Characteristics of buildings

- (i) number of storeys;
- (ii) condition;
- (iii) use;
- (iv) type;
- (v) permanence;
- (vi) year of construction;
- (vii) principal material of construction.

Characteristics of living quarters and of their occupants and facilities available

- (viii) ownership;
- (ix) occupancy;
- (x) water supply;
- (xi) refuse disposal;
- (xii) toilet facilities;
- (xiii) bathing facilities;
- (xiv) cooking facilities;
- (xv) principal fuel used for cooking
- (xvi) tenure;
- (xvii) number of rooms for living purposes;
- (xviii) rent.

A copy of the census questionnaire is appended at the end of the report.

14. Processing of data

The data were processed by the Data Processing Division of the Ministry of Finance on a 1900 ICL computer.

The census data on housing and population were processed independently and were matched at a later stage to relate the demographic and economic characteristics of households and population to the characteristics of dwellings in which they were living.

Complete matching of the two sets of data has not been possible due to households moving between the housing and population censuses. For the island of Mauritius matching of the data has not been possible for 2,038 households consisting of 1,697 family nuclei and 8,167 persons, i.e. for slightly less than 1% of the population.

15. Publication of the results

The preliminary results of the census have been presented in two volumes:

1972 Housing Census of Mauritius

1972 Population Census of Mauritius

The final results for the island of Rodrigues appear in
1972 Housing and Population Census of Mauritius (Rodrigues).

22. Acknowledgements

We wish to thank all members of the office and field staff who were engaged in the census. The success of the census was to a large measure the result of their sustained efforts at all stages of the census. Our thanks also go to the staff of the Data Processing Division of the Ministry of Finance for processing the data.

We are grateful to the United Nations Fund for Population Activities for their kind financial and technical assistance.

We wish to thank the public for their helpful co-operation and to express our gratitude to the large number of persons and organizations who have contributed to make the census a success.

Concepts and definitions

BUILDING

1. A building is any independent free-standing structure comprising one or more rooms and other spaces covered by a roof and usually enclosed within external walls. A building may be used or intended for residential, commercial, industrial or agricultural purposes or for the provision of services. It may be a detached dwelling, an apartment building, a shop, a warehouse, a factory, a workshop, a school, a church, etc. However, in case where an institution or an establishment consists of more than one building on the same premises information has been collected only for the main building.

Detached rooms used or intended for habitation, although forming part of one set of living quarters (see section 5 page 2) have been considered as separate buildings while detached structures providing facilities to the users of one or more buildings (as defined above) have not been counted as separate buildings (e.g. kitchen, toilet, bathroom, storerooms, etc.).

2. Characteristics of building

Condition

(i) Sound. A sound building is one having no visible defects or only slight defects which normally would be corrected during the course of regular maintenance (e.g. lack of paint, slight damage to porch or steps, minor cracks in walls, loose floor boards, defective doors and windows).

(ii) Deteriorating. A deteriorating building needs more repair than would be provided in the course of regular maintenance. The defects are more serious than those listed above, but they do not extend over a large area (e.g. widespread cracking in walls and floors, leading to ingress of water and rusting of reinforcement steel, subsidence of foundations resulting in large cracks in walls, rusting of corrugated iron sheets, excessive deflection of floors, walls bulging out, dampness in floors and walls).

(iii) Dilapidated. A dilapidated building is one not providing safe and adequate shelter. It endangers the lives or health of its occupants. Its defects are such that the building should be rebuilt or pulled down (e.g. holes, large open cracks or rotted, loose or missing material over a large area of the foundations, walls, roofs, floors or ceilings, sagging of floors, walls or roofs, extensive damage by cyclone, fire or flood).

3. Public buildings

Public buildings, as classified in table 2, refer to all buildings (even if owned by the private sector) being used entirely by central government, municipalities, semi-governmental bodies or public corporations for either general administrative purposes, or for the provision of services (except institutions) or for general repair work.

4. Permanence

The minimum classification, as suggested by the United Nations, is permanent and semi-permanent. A permanent building is expected to maintain its stability for ten years or more.

However, with the materials and methods used in the construction of buildings in this country, it was found most convenient to classify buildings into three categories, viz. straw huts, buildings on foundation and buildings not on foundation.

Straw huts are buildings with thatched roofs and walls made of wood, iron or tin sheets or vegetable material. They are commonly known as "cases en paille". "Carpenters" and bungalows with thatched roofs are not counted as straw huts.

LIVING QUARTERS

5. Living quarters are structurally separate and independent places of abode. They may (a) have been constructed, converted or arranged for human habitation, provided that they are not at the time of the census, being used wholly for other purposes, and that in the case of improvised housing units and living quarters other than housing units, they are occupied at the time of the census; or (b) although not intended for habitation, actually be in use as such at the time of the census.

Categories of living quarters

Living quarters are classified into two categories:-

- (i) Housing units;
- (ii) Living quarters other than housing units,
i.e. hotels, boarding houses and institutions
(e.g. convents, infirmaries, hospitals, barracks).

6. Housing unit

A housing unit is a separate and independent place of abode intended for habitation by one household or one not intended for habitation but occupied for living purposes by a household. Although intended for habitation by one household, a housing unit may, at the time of the census, be occupied by one or more households or by part of a household.

A housing unit may be made up of one or more rooms. The rooms may all be under the same roof or there may be annexes. Kitchens, bath-rooms and detached rooms, even if separate from the main set of rooms, still form part of the housing unit.

7 Separateness and independence

An enclosure is considered as separate if surrounded by walls and covered by a roof so that a person, or group of persons, can isolate themselves from other persons in the community for the purposes of sleeping, eating and protecting themselves from the hazards of climate and environment. Such an enclosure is considered as independent when it has direct access from the street or from a public or communal staircase, passage, gallery or grounds, i.e. when the occupants can come and go out of their living quarters without passing through another household's accommodation (see section 10 page 3 for definition of household).

8. Conventional dwelling

A conventional dwelling is a housing unit located in a permanent or semi-permanent building and designed for occupancy by one household. It may, however, at the time of the census, have been vacant or occupied by one or more households or by part of a household.

9. Occupancy

A principal residence is a housing unit which is the main place of abode of its occupants. If a bungalow or "cottage" is occupied all the year round by the same tenant or by its owner, it is considered as a principal residence.

A secondary residence is a housing unit - very often (although not always) a bungalow or a "cottage" which is either:-

- (a) Seasonally occupied by the owner and vacant or rented for the rest of the time;
- (b) Rented usually on a short-term basis to different persons.

HOUSEHOLD

10. A household is either:-

- (a) A person who makes provision for his own food or other essentials for living or;
- (b) A group of two or more persons related by ties of kinship or not, who make common provision (i.e. who share the expenses) for food and other essentials for living.

Two families living in a housing unit constitute one household if they have common housekeeping arrangements, but are considered as separate households if they have separate housekeeping arrangements.

- (c) In cases of varying degrees of housekeeping, a group of persons who share at least one meal a day is regarded as one household.

11. Family nucleus

A family nucleus is either:-

- (a) a married couple without children;
- (b) a married couple with one or more never-married children;
- (c) one parent (either father or mother) with one or more never-married children.

Couples in consensual unions are regarded as married couples.
