VOLUME IV

Housing and Living Conditions
(ISLAND OF MAURITIUS)

September 1985

Price : Rs. 100.00

Foreword

This report is Volume IV in the series showing the results of the 1983 Housing and Population Census and presents data on the housing and living conditions in the Island of Mauritius. Because of problems in the production of tables, it was not possible, last June, to publish the present volume together with Volume V, although both reports were scheduled to appear at the same time. The publication programme for the remaining census reports on households, fertility and mortality and economic characteristics is maintained.

The data presented in this report have been collected at the housing census and contain mostly information on buildings and their structural characteristics, housing units and the amenities therein, and households and population. It is to be noted therefore that figures on households and population included in this report are slightly different from figures on households and population obtained at the population census conducted about three months later. It is hoped that the present report will be particularly useful to administrators, planners and policy-makers, specially for studying the housing conditions and needs in the country. As usual, and as far as possible, data have been presented for each district separately but some tables for the municipal council areas have also been included. Basic data at the regional level will be available for consultation at this office as and when they are produced.

The figures presented here have been obtained directly from compilations of the raw data collected on the housing census questionnaires. Like all census data they may contain some errors and inconsistencies. A detailed evaluation and analysis will be carried out and published later. However, it is expected that the level of accuracy is likely to be high for most topics investigated at the Housing and Population Censuses. Already, an evaluation has shown the basic age-sex data to be good.

It is with pleasure that I again put on record my thanks to members of the public, my own staff, the census fieldstaff, and the staff of all departments, who have contributed to the success of the census. Particular thanks are due to the United Nations Fund for Population Activities and to the United Nations Economic Commission for Africa for financial and technical assistance.

(D. Zmanay)

23 - Households by type cross-classified by type of building in which located	152
24 - Households by geographical district cross-classified by principal fuel used for cooking	153

+++++*****+++++

Introduction

1. Background

In 1983 Mauritius successfully conducted its fifteenth census of population according to provisions laid down in the Statistics Act 1951. The count was made on a "de facto" basis. All persons alive in the State of Mauritius at midnight on the night of 2-3 July 1983 were enumerated irrespective of whether they were residents or not. Generally speaking, persons were enumerated in the household, whether private or institutional, in which they were present on census night. A list of such households had been compiled at the Housing Census taken about three months earlier than the Population Census.

2. Census fieldwork

At the previous census in 1972, the Island of Mauritius had been divided into 376, and the Island of Rodrigues into 12 enumeration areas of about 500 households each. These areas were further sub-divided in 1983 to meet certain specific needs in town and country planning and to provide clusters of roughly the same size for future sample surveys. Thus, for the 1983 census, there were about 2700 new enumeration areas in the Island of Mauritius and about 100 in Rodrigues. Each contained roughly 80 households in the rural and 100 households in the urban regions.

The fieldstaff consisted of 4,271 officers of whom 2 Chief Supervisors, 9 Senior Supervisors, 85 Supervisors, 607 Chief Enumerators and 3,568 Enumerators.

At the Housing census, each Chief Enumerator was assigned a number of enumeration areas in which he had to enumerate all buildings, housing units, households and commercial and industrial establishments. After completion of the Housing Census, an addressed population census form was prepared for each household identified, each vacant housing unit and also for housing units under construction.

At the Population census each Enumerator was given a list of about 70 such households and housing units together with the corresponding census questionnaires. The Enumerator was also supplied with a number of unaddressed blank questionnaires for new households that might have been formed, or that might have moved into the housing units since the Housing Census.

Census night was the night of 2 - 3 July 1983. The questionnaires were distributed to households by Enumerators from 25 to 30 June. Heads of households were requested to complete all items, except those on economic characteristics, in respect of every person who spent census night on the premises, or who joined the household or institution on 3 July without having been counted elsewhere. The questionnaires were collected from 3 to 8 July. Enumerators had to check the entries made by households, complete the columns on economic characteristics, and also complete all questionnaires and columns which the household had not been able to fill in.

A specimen of the Housing Census questionnaire is to be found inside the backcover of the report.

3. Data processing

The editing and coding of the census data was done by a team of about 68 officers recruited at clerical officer level. Processing of census data is the responsibility of the Data Processing Division of the Ministry of Finance. Data were transferred to discs through key-edit stations and stored on magnetic tapes. Validation, creation of data files and tabulation are being done on an ICL ME 29 - 37 computer.

4. Census budget

Government expenditure on the census project is estimated at about 12 million Rupees, inclusive of costs attributable to existing infrastructure and services not paid for from the census budget. Thus the cost per person enumerated is 12 Rupees. Furthermore, the United Nations Fund for Population Activities has contributed about 700,000 Rupees for strengthening the capability of the Central Statistical Office and the Data Processing Division. The census project has also benefitted from the advisory services of the Economic Commission for Africa.

5. Publication programme

The programme for the publication of census results has been delayed because of problems concerning the reproduction of tables. The revised publication plan now stands as follows:

Volume	I	-	Methodological Report	October	1984
Volume	II	-	Demographic characteristics - Island of Mauritius	November	1984
Volume	III	-	Geographical and Migration characteristics - Island of Mauritius	February	1985
Volume	IV	-	Housing and Living conditions - Island of Mauritius	September	1985
Volume	V	-	Housing and Population Census Results - Island of Rodrigues	June	1985
Volume	VI	-	Households - Island of Mauritius	October	1985
Volume	VII	-	Fertility and Mortality - Island of Mauritius	November	1985
Volume	VIII	-	Economic characteristics - Island of Mauritius	December	1985

It will be noted that the present volume is being published after Volume V. The reason is that both Volumes IV and V were originally planned for April 1985, but because of the unavailability by that date, of the complete list of tabulations for Volume IV, it has not been possible to meet this target. Furthermore, it was thought preferable to publish Volume V right away rather than wait for the completion of the present report.

6. Analysis and evaluation

In the past, evaluation of census data has been done by United Nations experts. This time the exercise is being done by local staff who are, however, working under the guidance of a United Nations expert with international experience in Demographic Analysis. The first analytical report covering the evaluation of the basic demographic data for the Island of Mauritius has already been published. Subsequent reports covering education, fertility, mortality, housing, manpower and migration will be published as and when they are completed. As regards the Island of Rodrigues, it is proposed to publish only one analysis report covering all topics for ease of reference.

7. Concepts and definitions

The concepts and definitions used at the census are in accordance with the recommendations of the United Nations, as contained in the Statistical Paper entitled "Principles and Recommendations for Population and Housing Censuses". Sometimes slight modifications have been made to suit local conditions.

The Housing Census enumerated all residential and partly residential buildings, all housing units in these buildings and all households in each housing unit. A building was defined as an independent free-standing structure, comprising one or more rooms and other spaces covered by a roof and usually enclosed within external walls. A housing unit was a separate and independent place of abode intended for habitation by one household, or one not intended for habitation but occupied for living purposes by a household. A household was either a person living on his own and making his own provision for food and other essentials for living, or a group of two or more persons, whether related or not, who lived together and made common provision for food and other essentials for living. Varying degrees of common house-keeping were resolved by considering as one household if there was a regular arrangement to share at least one meal a day. The head of household was the person acknowledged as such by the other members.

In hotels, or institutions such as convents, hospitals and prisons, the guests or inmates were considered as members of what may be termed an institutional household. The person in charge of the hotel or institution at the time of the census was considered as the head.

The tables presented in this report are self-explanatory. It must be mentioned however that as from table 6 onwards, detached rooms have been excluded from the category of residential buildings. A detached room was defined as being a separate structure used or intended for use by one or more members of a household living in a housing unit in a 'main' building. Moreover, the data on households and population, presented in the present report were collected at the housing census and are slightly different from those collected at the population census taken about three months later.
