CENTRAL STATISTICS OFFICE

2002 CENSUS OF ECONOMIC ACTIVITIES

REPUBLIC OF MAURITIUS

**PHASE I – SMALL ESTABLISHMENTS AND ITINERANT
UNITS**

VOLUME II: ANALYSIS REPORT

FOREWORD

The Central Statistics Office started its fourth Census of Economic Activities (CEA2002) in January 2002. The previous ones were conducted in 1985, 1992 and 1997.

The main objective of this exercise, which is conducted every five years, is to collect statistics on the operating characteristics and structure of all types of economic activities, except agriculture, undertaken in Mauritius and Rodrigues.

The Census was planned in two phases. The first phase, which lasted from January to December 2002, covered 'small' non-agricultural establishments and itinerant units, engaging fewer than 10 persons. Data were collected by direct interviews from a representative sample of 3,200 'small' units (3,000 in Mauritius and 200 in Rodrigues). Provisional estimates were published in August 2003 in Issue No. 421 of Economic and Social Indicators. A methodological report (Vol. 1) providing detailed information on the organisation and execution of the survey was published in August 2004.

The present report (Vol. 2) provides detailed tables and an analysis of the data collected during the first phase of the survey.

The second phase of the exercise covered 'large' non-agricultural establishments engaging 10 persons or more. The data, collected from July 2003 to June 2004, have been processed and are currently being tabulated and analysed. A report covering methodology, tabulation and analysis will be published in June 2005.

I would like here to thank all respondents, whose co-operation was vital to the success of the survey. My thanks also go to the various organisations and to the field as well as office staff for their valuable contributions.

EXECUTIVE SUMMARY

Background

The Census of Economic Activities (CEA) covering all types of economic activities except Agriculture is conducted every five years to collect detailed data on the employment, and the production and investment structure of units engaged in the different activities undertaken in the country. The last CEA was carried out in 2002.

Like the previous censuses carried out in 1985, 1992 and 1997, CEA 2002 was carried out in two phases. Phase I which spanned over a twelve-month period from January to December 2002, focused on small units, i.e. those engaging 9 or fewer persons. Phase II, which covered large establishments (engaging 10 or more persons), was carried out from July 2003 to June 2004.

The results presented in this report came from a representative sample of 3,200 small units (3,000 in Mauritius and 200 in Rodrigues), which were interviewed during the first phase of the survey.

Key highlights

Characteristics

- Number of small production units amounted to 74,928, of which 73,237 (98%) were located in the Island of Mauritius and 1,691 (2%) in the Island of Rodrigues.
- Around 60% (or 45,247) of the units were establishments operating in a fixed location, while the remaining 40% or 29,681 were itinerant units, which were mobile in nature.
- Some 82% of the units covered were involved in four broad activity groups: 'Wholesale and retail trade, and repairs' (40%), 'Manufacturing' (16%), 'Transport, storage and communications' (15%) and 'Construction' (11%).
- The majority of the units (90%) were owned by individual proprietors; 5% were companies and the remainder was of other types of ownership.

- Some 57% of the establishments occupied a floor area of less than 25 square metres while 11% occupied each a floor area of at least 100 square metres.

Persons engaged

- Total number of persons engaged stood at 175,791 of which 132,951 or 76% were males.
- The average number of persons engaged per unit worked out to 2.3.
- Some 82% of the units engaged at most 3 persons of which nearly half (48%) were run by only one person.
- The average number of paid employees per unit was estimated at 1.1.
- Of the 175,791 persons engaged, 46% were paid employees, 26% were own account workers without any employees, 16% were employers and the rest were mainly unpaid family workers.
- The majority or 92% of persons engaged were full-timers as compared to only 8% of part-timers.

Production accounts

- Total gross output of the small units was estimated at Rs 29,123 million. Of this, establishments contributed Rs 18,641 million (64%) and itinerant units, Rs 10,482 million (36%).
- Units engaged in four broad activity groups together accounted for more than three-quarters (78%) of the total gross output. These were 'Wholesale and retail trade, and repairs' (29%), 'Construction' (19%), 'Manufacturing' (17%) and 'Transport, storage and communications' (13%).
- The average annual gross output per unit worked out to around Rs 388,700, and that per persons engaged to Rs 165,700.
- Total intermediate consumption was estimated at Rs 12,442 million or 43% of gross output.
- Around 60% of expenses on intermediate consumption were on raw materials and 16% on electricity, water and fuel.

- Total value added worked out to Rs 16,681 million and the value added per unit to Rs 222,600.
- ‘Wholesale and retail trade, and repairs’ was the largest contributor to the total value added with Rs 6,445 million (39%), followed by ‘Transport, storage and communications’ with Rs 2,468 million (15%) and ‘Manufacturing’ with Rs 2,429 million (15%).
- Total compensation of employees amounted to Rs 4,202 million, of which 93% or Rs 3,914 million represented wages and salaries paid to employees.
- Total gross operating surplus was estimated at Rs 12,226 million

Gross domestic fixed capital formation

- Total gross domestic fixed capital formation amounted to Rs 1,387 million, of which nearly half (49%) was spent on machinery and equipment (inclusive of transport equipment).

CHAPTER 1 – GENERAL

1.1 Introduction

The Central Statistics Office conducted its fourth Census of Economic Activities (CEA 2002) in year 2002. The main objective of this exercise, which is carried out every five years, was to collect data to update statistics on the operating characteristics and structure of units engaged in all types of economic activities, except Agriculture, undertaken in the Republic of Mauritius.

The CEA 2002 was carried out in two phases. The first phase, which covered ‘small’ non-agricultural establishments, i.e. those engaging fewer than 10 persons inclusive of own account and unpaid family workers, and itinerant units was conducted from January to December 2002. Data collection for the second phase, directed to ‘large’ establishments, was carried out from July 2003 to June 2004.

This report presents detailed tables and an analysis of the data collected during the first phase of the Census.

1.2 Methodology

1.2.1 *Scope and coverage*

The first phase of CEA 2002 covered all economic activities, engaging fewer than 10 persons in the Republic of Mauritius except:

- (a) Agricultural activities;
- (b) Domestic services carried out within households (e.g. maids, gardeners etc.);
- (c) Activities carried out by operators in the *Export Processing Zone, Export Service Zone, Freeport and Offshore sectors*, these being covered in Phase 2 of the census; and
- (d) Illegal transactions such as drug trafficking.

1.2.2 Unit of enquiry

The unit of enquiry, known as the *production unit*, was either the establishment or the owner/proprietor of an itinerant unit.

- (a) *An establishment* is defined as a production unit engaged in one kind, or predominantly one kind of activity at a fixed physical location.
- (b) *An itinerant unit* refers to a mobile production unit, which does not operate at a fixed location. Examples are hawkers and sellers along the road within a makeshift location, taxi operators and units involved in construction activities.

1.2.3 Reference period

The survey was conducted from January to December 2002. Selected units had to report data relating to one month.. However for hawkers, because of memory lapse, the reporting period was the third week of the month. The monthly and weekly data were then consolidated using appropriate weights to arrive at annual estimates for year 2002.

1.2.4 Legal authority and confidentiality

CEA 2002 was conducted under the provisions made in the *Statistics Act 2000* and published in the Government Gazette as GN No. 87 of 2002.

This act requires owners/managers of selected production units to furnish to the Director of Statistics such information as requested in the questionnaire and at the same time guarantees the confidentiality of all information provided.

1.2.5 Sampling frame

The basis for the sampling frame consisted of a list of establishments, which were identified at the 2000 Housing and Population Census. This was supplemented with information from other sources such as licences issued by the local authorities, and registrations with various departments and organizations such as taxi operators registered at the National Transport Authority and doctors from the Medical Council. The final number of

small production units covered by this phase of the census, as at June 2002, was estimated at 74,928.

1.2.6 Sample size

Based on the sample size used in the previous exercise in 1997 and optimising on resources available, the sample size for the survey was set to 3,000 production units for the Island of Mauritius and 200 for Rodrigues.

1.2.7 Sampling design

The frame of production units was stratified (grouped) according to the type of activities based on the National Standard Industrial Classification of all Economic Activities (NSIC), an adapted version of the latest revision (rev. 3) of the United Nations International Standard Industrial Classification of all Economic Activities.

The final sample size of 3,200 units (3,000 for Island of Mauritius and 200 for Island of Rodrigues) was allocated to the different strata (group of units) according to Neymann allocation or optimum allocation at fixed cost.

Sampling within strata was effected by Systematic Random Sampling method to ensure representativeness. Also to capture seasonal features in production activities, the sample of 3,000 units in Mauritius was spread over 12 months while that of Rodrigues (200), over four months (third month of each quarter). Care was also taken to ensure that the sample was representative of geographical regions (urban and rural).

1.2.8 Data collection and field organisation

Data collection for the first phase of CEA 2002 was carried out from January to December 2002. The overall field operation was under the responsibility of a Chief Supervisor who was supported by a Senior Supervisor.

In the Island of Mauritius, around 250 production units were interviewed each month during 2002. The monthly data collection was carried out by 16 interviewers under the close

supervision of 4 Supervisors. In the Island of Rodrigues, data were collected in March, June, September and December 2002, necessitating the services of four Interviewers and one Supervisor for each survey month.

The data collection exercise was preceded by a screening exercise or an identification phase, during which each interviewer had to identify the selected production units. This phase helped to identify units that had moved, changed activities, been dormant or simply ceased operation.

Once the selected units had been successfully identified, the respondents were requested to keep daily/weekly records of their transactions in diaries provided to them. To ensure that records were being properly kept and to answer any queries, interviewers were requested to visit the selected units regularly. The completed diaries were collected at the end of the survey months.

1.2.9 Data processing and analysis

The Central Information Systems Division (CISD) of the Ministry of Information Technology and Telecommunications handled the data processing using the ‘Integrated Microcomputer Processing System’ (IMPS), software developed by the U.S. Bureau of Census. Analysis of the data was carried out by making use of the “Statistical Package for Social Sciences” (SPSS) and Microsoft Excel.

1.2.10 Classifications

Classifications used were:

- (a) *National Standard Industrial Classification of all Economic Activities (NSIC) Rev. 3* for the classification of economic activities. NSIC is an adapted version of the International Standard Industrial Classification of all Economic Activities (ISIC);
- (b) *Central Product Classification (CPC) Rev 1.0* for the classification of products.

1.2.11 Concepts and definitions

Concepts and definitions were according to the latest revision of System of National Accounts 1993 (SNA93).

- (a) An **establishment** is defined as a production unit engaged in one kind, or predominantly one kind of activity at a fixed physical location.
- (b) An **itinerant unit** refers to a mobile production unit, which does not operate at a fixed location. Examples are hawkers and sellers along the road within a makeshift location, taxi operators and units involved in construction activities.
- (c) **‘Small’** units are those engaging fewer than 10 persons, including working proprietors.
- (d) **Persons engaged** in a production unit refer to the total number of persons who work in or for the unit. It includes working proprietors, employees and unpaid workers but exclude outworkers.
- (e) An **employee** is a person who works in a paid employment job and receives remuneration in wages, salary, commissions, tips, piece rates, bonuses or in kind payments such as food, housing or training.
- (f) An **employer** is a person who, working on his or her own economic account or with one or a few partners, holds a self-employment job, and, in this capacity has engaged on a continuous basis (including the reference period) one or more persons to work for him/her as employees.
- (g) An **own account worker** is a person who, working on his or her own economic account or with one or a few partners, holds a self-employment job, and has not engaged on a continuous basis any employees during the reference period.
- (g) An **apprentice** is a person who is learning a job with or without any remuneration.
- (h) An **unpaid family worker** is a person forming part of the household of any of the proprietors or related to them, who is actively engaged in the business, without any remuneration.

- (i) An **outworker** is a person (a) who holds explicit or implicit contracts of employment under which he agrees to work for a particular enterprise, by prior arrangements or contract with that enterprise and (b) whose place of work is not within any of the establishments which make up that enterprise.
- (j) **Part-time** workers are those persons who work less than half of the usual working hours.
- (k) **Basic Price** is the amount receivable by the producer exclusive of taxes on products (e.g. excise duty and Value Added Tax) and inclusive of subsidies on products. The equivalent of imported products is the C.I.F value at the border of the importing country.
- (l) **Purchasers' Price** is the amount payable by the purchaser exclusive of deductible taxes on products (e.g deductible VAT).
- (m) **Gross output** is the value on the market of goods and services produced, including work in progress and products for own use. For distributive trade, output is measured by the trade margin, which is obtained as the difference between sales value and cost of goods sold. Gross Output is valued at basic prices.
- (n) **Intermediate consumption** of industries covers non-durable goods and services used up in production, including repairs and maintenance of the capital stock. Intermediate consumption is valued at purchasers' prices.
- (o) **Value added** at basic prices equals to the gross output at basic prices less the value of intermediate consumption at purchasers' prices.
- (p) **Wages and salaries** in cash comprise of all payments which employees receive in respect of their work before deduction of employees' contribution to social security schemes. Payments such as refund of travelling, commissions, overtime, bonuses and cost of living allowances are also included.
- (q) **Payments in kind** are goods and services provided to employees free of charge or at markedly reduced costs, which are clearly of direct benefit to the employees as consumers. Examples are food, drinks, clothing, accommodation or other commodities. The value of these commodities is estimated at their market prices.

- (r) **Compensation of employees** comprises payments of wages and salaries by producers to their employees. Payments in kind and contributions to social security and to private pension fund, casualty insurance and similar schemes are also included.
- (s) **Taxes on production and imports** include all taxes that enterprises incur by engaging in production. There are two categories of taxes, namely ‘Taxes on products’ and ‘Other taxes on production’.
- (i) *‘Taxes on products’* are payable on goods and services when they are produced, sold or used. Examples are Excise Duties, Import Duties and Value Added Taxes (VAT).
- (ii) *‘Other taxes on production’* are taxes payable out of the value added of producers. This category of taxes includes taxes levied on property, fixed assets and labour employed. Examples are municipal rates, motor vehicle licences and business licences.
- (t) **Gross Operating surplus** is defined as the excess of value added over compensation of employees and ‘Other taxes on production’.

1.3 Limitations

(i) The frames used at CEA 1997 and 2002 are not strictly comparable and therefore the results of the two surveys cannot be compared. The sampling frame for the CEA conducted in 1997 was restricted to licences issued by local authorities, and units registered at relevant authorities. For the 2002 CEA, the sampling frame used was the list of establishments enumerated at the 2000 Housing Census, updated with licences issued by local authorities and units registered at relevant authorities. Furthermore, the number of units was adjusted with data on self-employed persons obtained from the 2000 Population Census, and also on the basis of the screening exercise carried out to identify the selected units, as mentioned in Para 1.2.8.

(ii) Distinction should be made between the estimates published in this report and official estimates of economic variables such as employment and national accounts aggregates which are regularly published by this office through relevant economic and social indicators. The

objective of the CEA was to collect information from production units in view of having up-to-date data on the structure of the economy. Economic aggregates obtained from the CEA, covering both the small and the large production units, do not cover the whole economy. Information collected on the production structure will be used to have up-to-date aggregates for the total economy. Also, employment data were provided by the surveyed units. Thus, persons working in two units would be reported at both units and would be counted twice in the censuses. Official estimates of employment would count these persons only once.

CHAPTER 2 – CHARACTERISTICS OF ‘SMALL’ PRODUCTION UNITS

2.1 Activities

The first phase of CEA 2002 covered some 74,928 small production units in the Republic of Mauritius. These comprised 45,247 (60%) establishments and 29,681 (40%) itinerant units.

Table 2.1: Distribution of small production units by industrial activity

Industrial Activity NSIC Rev 3	Number of units	Percentage
Total	74,928	100.0
D. Manufacturing	11,848	15.8
F. Construction	8,243	11.0
G. Wholesale and retail trade, and repairs	29,829	39.8
H. Hotels and restaurants	5,594	7.5
I. Transport, storage and communications	11,601	15.5
J. Financial intermediation	128	0.2
K. Real estate, renting and business activities	1,765	2.4
M. Education	1,340	1.8
N. Health and social work	1,071	1.4
O. Other service	3,509	4.7

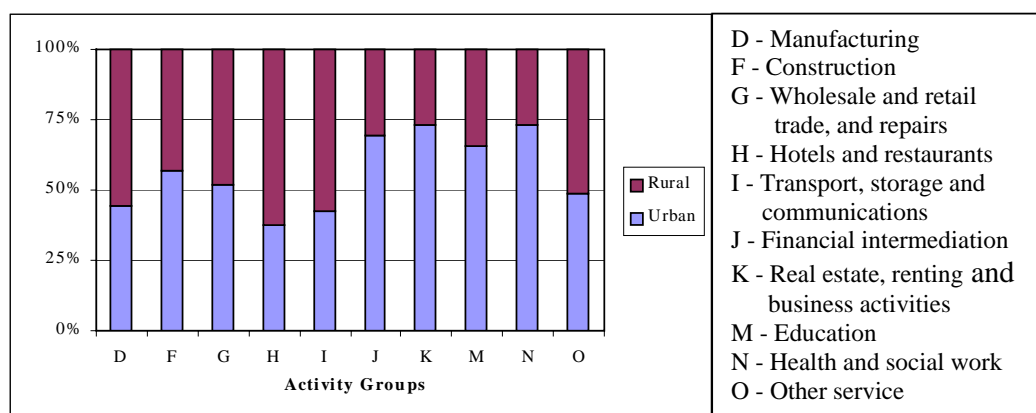

As shown in Table 2.1, the majority (82%) of the units covered was involved in four broad activity groups: ‘Wholesale and retail trade, and repairs’ (40%), ‘Manufacturing’ (16%), ‘Transport, storage and communications’ (16%) and ‘Construction’ (11%). Details are available in Table A1.

2.2 Location

Most of the units or 98% (73,237) were located in the Island of Mauritius and the remaining 1,691 (2%), in the Island of Rodrigues.

Although the units were almost equally distributed in urban and rural regions (37,222 in urban and 37,706 in rural), disparities existed among activity groups. Activities which were predominantly in the urban regions were ‘Real estate, renting and business activities’ (73%), ‘Health and social work’ (73%), ‘Financial intermediation’ (70%) which consisted mostly of insurance companies, and ‘Education’ (66%) represented mainly by preprimary schools. On the other hand units engaged in ‘Hotels and Restaurants’ were mostly (63%) found in the rural regions. (Table A4)

Fig. 2.1 – Percentage distribution of production units by industrial activity and region

2.3 Mobility

As stated earlier, out of the 74,928 production units, 45,247 (60%) were establishments, which operated at a fixed location and 29,681 (40%) were itinerant units, which were mobile in nature.

As shown in Table A5, the majority of the establishments, or 85%, were located in partly residential and non-residential buildings. Some 6% were located in wholly residential buildings, another 6% in the yard and the remaining 3% in other locations. Establishments located in the yard were mainly units engaged in the manufacture of wooden furniture and metal openings as well as those engaged in the repair of motor vehicles.

About 38% of the itinerant units were engaged in transport activities, that is, taxi, lorry, van and bus transport. A significant proportion, 28%, was in the construction sector while hawkers engaged in the selling of fruits, vegetables and clothing along the roads and in

fairs accounted for 25% of the itinerant units. The remaining 9% were street vendors cooking and selling cakes and pastries on the roads. (Table A1)

2.4 Ownership

Table 2.2 shows the percentage distribution of units by type of ownership. Around 90% or 67,603 of the 74,928 production units were owned by individual proprietors. The remainder was either companies (5%), in private partnership (2%) or of other forms of ownership (3%), mostly non-profit institutions.

Table 2.2 : Percentage distribution of legal form of ownership by industrial activity

Industrial Activity NSIC Rev 3	Total	Legal form of ownership (%)			
		Individual proprietor	Private partnership	Company	Other
Total	100.0	90.2	2.4	4.8	2.6
D. Manufacturing	100.0	94.3	1.5	4.2	0.0
F. Construction	100.0	82.9	5.7	5.7	5.7
G. Wholesale and retail trade, and repairs	100.0	91.3	2.4	5.1	1.2
H. Hotels and restaurants	100.0	93.4	1.1	5.6	0.0
I. Transport, storage and communications	100.0	95.8	1.1	1.9	1.2
J. Financial intermediation	100.0	43.8	3.1	39.8	13.3
K. Real estate, renting and business activities	100.0	79.0	3.9	15.9	1.3
M. Education	100.0	85.5	5.9	6.2	2.4
N. Health and social work	100.0	79.2	2.8	4.9	13.1
O. Other service	100.0	73.6	1.8	3.6	21.0

Within most major activity groups, more than three-quarters of the units were owned by individual proprietors with high percentages ranging from 91% to 96% being observed for 'Manufacturing', 'Wholesale and retail trade, and repairs', 'Hotels and restaurants' and 'Transport, storage and communications'. The only exceptions were units engaged in 'Financial intermediation' with around 40% owned by individual proprietors and a similar proportion by companies. Details by activity group are given at Table A6.

2.5 Floor area

Occupied floor area relates only to establishments, i.e., those which have a fixed location. More than half (57%) of 45,247 establishments occupied a floor area of less than 25 m² as compared to only 11% occupying a floor area of 100 m² or more (Table 2.3).

Table 2.3: Percentage distribution of floor area occupied by establishments

Industrial Activity NSIC Rev 3	Total	floor area (m ²)			
		<25	25 - 49	50 - 99	100 +
Total	100.0	57.0	19.0	13.4	10.6
D. Manufacturing	100.0	62.8	16.3	14.2	6.6
G. Wholesale and retail trade and repairs	100.0	55.9	18.7	14.2	11.2
H. Hotels and restaurants	100.0	41.7	27.0	16.2	15.1
I. Transport, storage and communications	100.0	53.4	6.1	9.0	31.5
J. Financial intermediation	100.0	16.4	53.1	27.3	3.1
K. Real estate, renting and business activities	100.0	61.1	17.8	11.7	9.4
M. Education	100.0	25.3	26.5	17.7	30.5
N. Health and social work	100.0	59.0	27.4	6.7	6.9
O. Other service	100.0	68.7	18.2	4.0	9.1

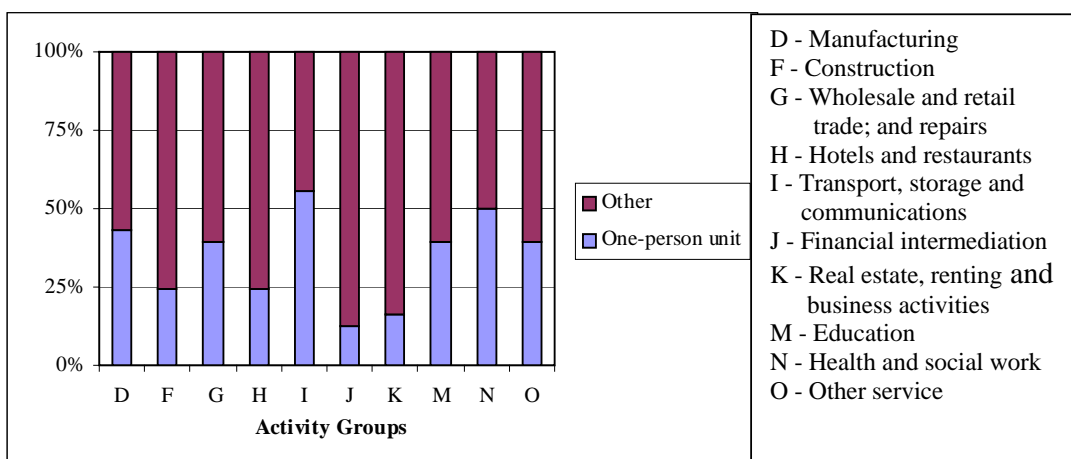

Units occupying floor areas of less than 25 m² were mostly engaged in ‘Other services’ (69%) comprising mostly hairdressing and beauty parlours, and ‘Manufacturing’ (63%). On the other hand, significantly high proportions of units engaged in ‘Education’, mostly preprimary schools, and ‘Transport, storage and communications’, mostly travel agencies, occupied more spacious floor areas with nearly one third of them occupying floor areas of 100 m² or more.

CHAPTER 3 – EMPLOYMENT CHARACTERISTICS

3.1 Size of units

The total number of persons engaged, that is, the total number of persons who worked in or for the unit, stood at 175,791. Of these, 108,747 or 62% were working in the establishments and the remaining 67,044 (38%), in the itinerant units.

Fig 3.1: Percentage distribution of units by industrial activity and employment size

Out of the 74,928 units covered, 61,239 or 82% engaged at most 3 persons, of which nearly half (48%) were run by only one person. Units with 7 or more persons numbered 2,645 and represented only around 4% of units covered. On the average, a production unit engaged 2.3 persons.

The employment size varied among activities. Thus, one-person production units were mostly engaged in activities of ‘Transport, storage and communications’ (56%), ‘Health and social work’ (50%) comprising mainly medical practitioners and ‘Manufacturing’ (43%), mainly cabinet makers, tailors and seamstresses. About 75% of units involved in activities of ‘Construction’ and ‘Hotels and restaurants’, and over 80% of those in ‘Financial intermediation’ and ‘Real estate, renting and business activities’ engaged two or more persons. (Table A11)

The average number of persons engaged per production unit varied from 1.8 for ‘Transport, storage and communications’ to 3.8 for ‘Construction’ (Table A16), giving an overall average of 2.3.

The average number of paid employees per production unit which worked out to 1.1, ranged from 0.7 for ‘Hotels and restaurants’ and ‘Wholesale and retail trade, and repairs’ to 2.8 for ‘Construction’.

3.2 Employment by sex

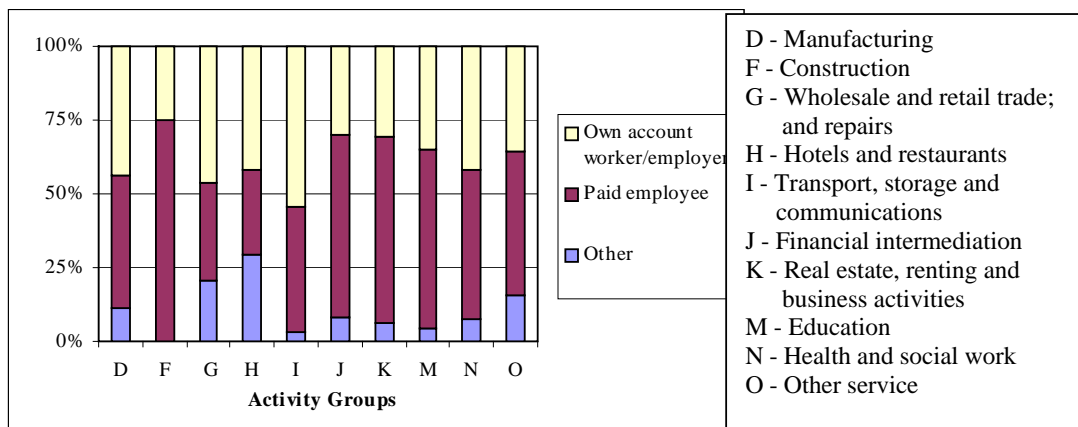

Table 3.1: Employment by industrial activity and sex

Industrial Activity NSIC Rev 3	Percentage		
	Male	Female	Total
Total	76	24	100
D. Manufacturing	80	20	100
F. Construction	100	0	100
G. Wholesale and retail trade, and repairs	68	32	100
H. Hotels and restaurants	45	55	100
I. Transport, storage and communications	95	5	100
J. Financial intermediation	39	61	100
K. Real estate, renting and business activities	71	29	100
M. Education	30	70	100
N. Health and social work	56	44	100
O. Other service	59	41	100

Analysis of employment by sex indicates that 3 out of 4 persons engaged or 132,951 were males. Nearly all persons engaged in ‘Construction’ were men while a very high proportion (95%) of male employment was observed in ‘Transport, storage and communications’. On the other hand, female employment was predominant in ‘Education’ and ‘Financial intermediation’ with 70% and 61% respectively.

3.3 Employment status

Of the 175,791 persons engaged, 72,798 or 42% were either own account workers (26%) or employers (16%). Almost half of the workforce (46%) was employees while the rest were mostly unpaid family workers.

Fig 3.2: Employment by industrial activity and employment status

The highest number of employees were observed in ‘Construction’ and ‘Real estate, renting and business activities’ accounting for 75% and 63% of their respective workforce while the lowest proportions were found in ‘Wholesale and retail trade, and repairs’ (34%) and ‘Hotels and restaurants’ (29%). The low proportion in these two activity groups can be explained by the fact that more than half (55%) of persons engaged in these groups were own account workers and unpaid family workers.

Own account workers and employers were mostly males (83%). The proportion of males among employers was 89%, higher than the figure of 80% among own account workers. As regards employees, the proportion of males worked out to 78%.

Females were predominant only among unpaid family workers. Out of the 21,520 workers in this category 12,712 or 59% were women. They were mostly engaged in activities pertaining to ‘Wholesale and retail trade, and repairs’, ‘Hotels and Restaurants’ and ‘Manufacturing’. These three activity groups together accounted for 93% of the total female unpaid family workers.

3.4 Part-time and full-time employment

A part-time worker is a person who works less than half of the usual working hours.

The majority or 92% of persons engaged in the production units were full-timers as compared to only 8% of part-timers. Among the part-timers, 63% were males. (Table A10)

Within activity groups, relatively high proportions of part-timers were observed in ‘Health and social work’ (18%) and ‘Other services’ (18%). These were mainly medical practitioners and those engaged in entertainment and recreational activities respectively.

CHAPTER 4 – PRODUCTION ACCOUNTS

4.1 Introduction

Most of the small units covered at the 2002 Census of Economic Activities do not keep accounts of their transactions. This was the reason why data collection from these units was effected by direct interviews instead of sending the questionnaires by mail.

The basic economic structure of production units could be studied by considering the breakdown of their income and expenditure. Following international guidelines (1993 System of National Accounts) economic aggregates that have been compiled provided indications about the structure of the economic transactions pertaining to these small units. After adjustments for problems of coverage and underreporting, the estimates will be used to update the structure of the economy. Some of the main aggregates which have important economic significance both at national level and sectoral level are gross output, intermediate consumption, value added, compensation of employees and gross operating surplus, which have been defined at para. 1.2.11 in this report.

In simple terms, the value of goods and services produced by a unit is termed gross output. The difference between gross output and intermediate consumption (value of goods and services consumed during production) gives the value added which when aggregated over all units of production at national level works out to the Gross Domestic Product. The gross operating surplus of the unit, which relates mainly to profit, is obtained after deducting compensation of employees (mainly wages and salaries) and ‘other taxes on production’ (mainly payments for rates and licences) from value added.

4.2 Gross output

The value of goods and services produced by the units covered amounted to Rs 29,123 million for year 2002. Production units operating in establishments contributed Rs 18,641 million representing 64% of the total production and itinerant units, Rs 10,482 million or 36%.

Four main activity groups together accounted for slightly more than three-quarters (78%) of the total gross output. These were ‘Wholesale and retail trade, and repairs’ with

Table 4.1: Distribution of gross output by industrial activity

Industrial Activity NSIC Rev 3	Value (Rupees million)	Percentage
Total	29,123	100.0
D. Manufacturing	5,030	17.3
F. Construction	5,537	19.0
G. Wholesale and retail trade, and repairs	8,336	28.6
H. Hotels and restaurants	1,902	6.5
I. Transport, storage and communications	3,914	13.4
J. Financial intermediation	181	0.6
K. Real estate, renting and business activities	2,003	6.9
M. Education	427	1.5
N. Health and social work	492	1.7
O. Other service	1,302	4.5

Rs 8,336 million (29%), ‘Construction’ with Rs 5,537 million (19%), ‘Manufacturing’ with Rs 5,030 million (17%) and finally ‘Transport, storage and communications’ with Rs 3,914 million (13%).

Within ‘Wholesale and retail trade, and repairs’, the highest contributors were the retailers with Rs 5,022 million (60%) followed by the wholesalers with Rs 2,294 million (28%). Manufacturers of wooden furniture and of fabricated metal openings and fixtures contributed to around 51% of gross output of the manufacturing sector, while the greatest share (90%) of the gross output of ‘Transport, storage and communications’ was attributable to the itinerant units, i.e. operators taxi car, lorries, vans and buses.

The average annual gross output per unit worked out to around Rs 388,700. However the disparity in output is clearly shown in Table 4.1. About 30% of units had an annual

Table 4.2: Distribution of production units by range of gross output

Range of gross output (Rs '000)	Number of units	Percentage
Total	74,928	100.0
< 100	21,413	28.6
100 < 200	18,201	24.3
200 < 500	18,751	25.0
500 < 1,000	10,005	13.4
1,000+	6,558	8.8

production of less than Rs 100,000. Another 25% produced goods and services worth between Rs 100,000 and Rs 200,000 and a similar proportion between Rs 200,000 and Rs 500,000. Only 9% had an annual output of more than Rs 1 million.

The average annual gross output per person engaged was estimated at Rs 165,700. The highest value was recorded in 'Financial intermediation' with Rs 480,100 and lowest in 'Education' with Rs 115,500.

4.3 Intermediate consumption (IC)

Table 4.3: Distribution of intermediate consumption by component and industrial activity

Industrial Activity NSIC Rev 3	Raw materials	Electricity, water and fuel	Rent	Transport equipment	Work subcontracted	Other	Total
Total	59.8	15.9	7.0	4.4	4.5	8.4	100
D. Manufacturing	82.6	7.0	3.0	3.7	0.7	2.9	100
F. Construction	84.9	3.9	1.8	0.5	6.4	2.5	100
G. Wholesale and retail trade, and repairs	23.3	25.7	19.7	13.0	0.0	18.1	100
H. Hotels and restaurants	74.4	11.6	7.6	1.9	0.0	4.5	100
I. Transport, storage and communications	22.0	58.9	2.4	4.1	1.3	11.4	100
J. Financial intermediation	1.2	9.9	25.1	12.2	0.0	51.7	100
K. Real estate, renting and business activities	6.1	10.2	10.7	8.6	35.1	29.4	100
M. Education	13.4	15.6	33.9	5.1	0.0	31.9	100
N. Health and social work	23.9	25.2	26.1	8.8	5.0	11.0	100
O. Other service	22.1	20.4	25.2	8.1	6.3	17.8	100

The value of goods and services consumed in the production process or the intermediate consumption during 2002 for the units covered was estimated at Rs 12,442 million or 43% of the gross output.

Around 60% of expenses on intermediate consumption were on raw materials, 16% on electricity, water and fuel, 7% on rent, 5% on work sub-contracted, 4% on transport and communications and the remaining 8% on other goods and services.

The composition of intermediate consumption varied from activity to activity. Expenses on raw materials constituted more than 80% of the intermediate consumption of units operating in “Manufacture” and “Construction”. About 60% of the intermediate consumption of “Transport, storage and communications” was on electricity, water and fuel.

4.4 Value added

Table 4.4 – Distribution of value added by industrial activity

Industrial Activity NSIC Rev 3	Value added (Rupees million)	Percentage
Total	16,681	100.0
D. Manufacturing	2,429	14.6
F. Construction	1,174	7.0
G. Wholesale and retail trade, and repairs	6,445	38.6
H. Hotels and restaurants	1,005	6.0
I. Transport, storage and communications	2,468	14.8
J. Financial intermediation	156	0.9
K. Real estate, renting and business activities	1,409	8.5
M. Education	249	1.5
N. Health and social work	387	2.3
O. Other service	957	5.8

Value added, which is the difference between gross output and intermediate consumption, worked out to Rs 16,681 million for all units covered, and value added per unit to Rs 222,600

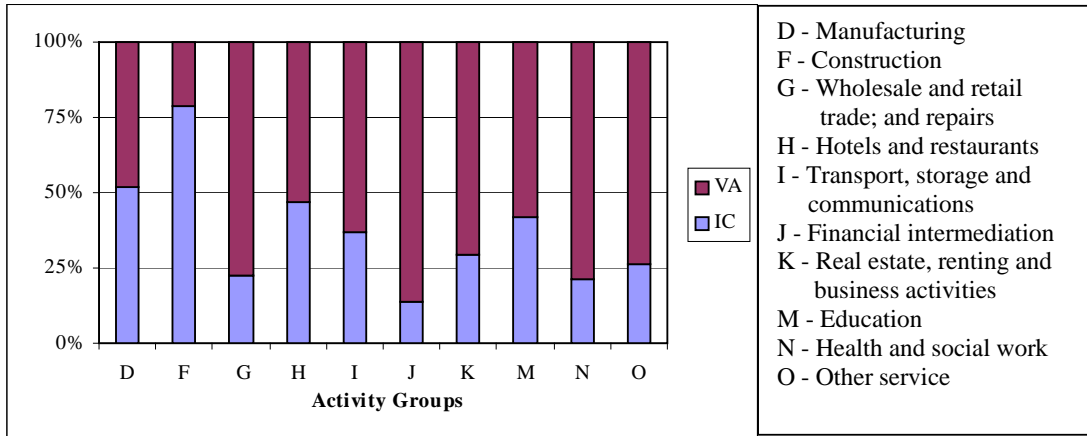

‘Wholesale and retail trade, and repairs’ was the largest contributor to the total value added with Rs 6,445 million (39%), followed by ‘Transport, storage and communications’ with Rs 2,468 million (15%) and ‘Manufacturing’, Rs 2,429 million (15%).

However, the highest value added per unit was recorded in ‘Financial intermediation’ with Rs 1,220,400, followed by ‘Real estate, renting and business activities’, Rs 798,500. The lowest value was in ‘Construction’ with Rs 142,400.

4.5 Production structure

The proportion of intermediate consumption to gross output varied largely from one activity group to the other. The highest ratio was observed in the construction sector where to produce one rupee of worth of gross output 79 cents worth of goods and services were consumed (IC), thus generating 21 cents worth of value added. In contrast, in ‘Financial Intermediation’, where the lowest ratio of IC/gross output was recorded, the production of one rupee worth of output required 13 cents of intermediate consumption resulting to 87 cents of value added.

Fig 4.1: Percentage distribution of value added and IC out of gross output

4.6 Compensation of employees (CE)

Out of the Rs 16,681 million of value added generated by the small units covered, Rs 4,202 million or 25% was spent on compensation of employees. Of this 93% or Rs 3,914 million represented wages and salaries paid to employees. (Table A17)

Among activity groups, the proportion of CE to value added varied between 13% in ‘Health and social work’ and 53% in ‘Construction’.

4.7 Gross operating surplus (GOS)

Gross operating surplus is defined as the excess of value added over compensation of employees and ‘Other taxes on production’ (e.g. rates and licenses). Gross operating surplus of units covered amounted to Rs 12,226 million and represented 73% of their value added. The ratio of gross operating surplus to value added ranged from 47% for ‘Construction’ to 86% for ‘Health and social work’.

4.8 Gross domestic fixed capital formation (GDFCF)

Gross domestic fixed capital formation or investment, which represents expenditure on capital goods, amounted to Rs 1,387 million. Highest investment was made by ‘Wholesale, retail trade, and repairs’ with expenses amounting to Rs 683 million representing about half of the total expenditure on investment by the production units covered, followed by ‘Transport, storage and communications’ with expenses of Rs 260 million or 19%.

Nearly half (49%) of the GDFCF of the production units covered was on machinery and equipment inclusive of transport equipment, 23% on furniture and fittings, 18% on buildings construction and 9% on computers and related accessories.

The composition of expenditure on capital goods varied from activity to activity. Thus, units engaged in ‘Construction’ invested only on machinery and equipment while more than half of investment (57%) made by ‘Manufacturing’ was on that item. A large

Table 4.5: Percentage distribution of GDFCF by industrial activity and type of capital goods

Industrial Activity NSIC Rev 3	Type of capital goods						Total
	Building	Transport equipment	Other machinery and equipment	Furniture and fittings	Computer and accessories	Other	
Total	17.7	30.8	18.3	22.5	9.0	1.6	100.0
D. Manufacturing	16.7	3.9	57.4	1.1	19.1	1.7	100.0
F. Construction	0.0	0.0	100.0	0.0	0.0	0.0	100.0
G. Wholesale and retail trade, and repairs	29.1	15.5	8.9	39.1	5.9	1.4	100.0
H. Hotels and restaurants	53.7	0.0	6.0	16.2	7.1	17.0	100.0
I. Transport, storage and communications	0.0	96.6	0.7	1.0	1.3	0.0	100.0
J. Financial intermediation	80.4	0.0	0.0	10.1	9.4	0.0	100.0
K. Real estate, renting and business activities	6.7	31.2	3.3	30.7	26.2	2.0	100.0
M. Education	6.2	37.9	6.5	5.2	40.1	4.3	100.0
N. Health and social work	19.3	14.2	45.3	10.0	10.7	0.6	100.0
O. Other service	0.6	2.9	88.3	4.9	1.4	2.0	100.0

share of investment by 'Transport, storage and communications' went to transport equipment (97%) while 'Financial Intermediation' invested mostly on buildings (80%). Some 40% of investment made by units engaged in 'Education' was on computers and related accessories.

WAY FORWARD

The sampling frame was constructed on the basis of a list of establishments available from the 2000 Housing Census and complemented with other sources, the main one being licenses issued by the local authorities and processed by the CBR unit of the office. In many cases, especially in the wholesale/retail trade activities, several licenses are usually issued to the same establishment. The consolidation of the licenses to arrive at a list of establishments and itinerant units was a very tedious and time-consuming task. With the computerisation of activities of the Central Business Register unit, the consolidation process will be fully automated. This will definitely prove to be an important step in improving the sampling frame for future business surveys. However the setting up of a dynamic register which would provide prompt information on the stock, births and deaths of businesses is much warranted. The register would include all businesses operating in the country, as well as basic information such as location of the business, its main activity, employment, date of start of operation and date of closure if the business has ceased operation.

Though the Neyman allocation adopted in the design of the sample is an improvement over previous designs, it is nevertheless observed that certain activity groups were not adequately represented due to the relative smaller sample sizes allocated to them. This resulted in high standard errors for these groups. It is recommended that more weights be given to these groups in the next exercise due for 2007.

Due to lack of definition, it had not been possible to obtain separate estimates of the formal and informal sectors, or for the small and medium enterprises, although they have been covered in the CEA. There is therefore need for proper definitions of these sectors that can be operationalised, so that appropriate questions can be asked at the next round of the census to enable their identification and to have separate estimates for these sectors.

An evaluation exercise of the CEA2002 results will have to be carried out to identify gaps due to reporting and coverage errors of the census. Thereafter the national accounts structure will be revised accordingly and an attempt to measure the contribution of small units in the economy could be made.

ANNEX

Table A1 - Number of production units and persons engaged, gross output and value added by industrial activity, CEA 2002, Republic of Mauritius
