DIGEST OF AGRICULTURAL STATISTICS – 2000

F O R E W O R D

This is the seventeenth issue of a regular publication of the Central Statistics Office on Agricultural Statistics for the Republic of Mauritius.

The digest is designed to bring together in a single report as many series as possible on agricultural statistics. It thus contains information on the sugar, tea, tobacco, foodcrops, livestock and fisheries sectors. Data showing the pattern of food consumption of the population are given in the yearly "Food Balance Sheets". Agricultural price statistics are shown in the section "Producer Price Index - Agriculture (PPI-A)".

The data published cover the five-year period from 1996 to 2000 and are the latest available as at end of June 2001. Some of the figures are provisional and subject to revision in later issues. Figures in this issue supersede those appearing in previous ones.

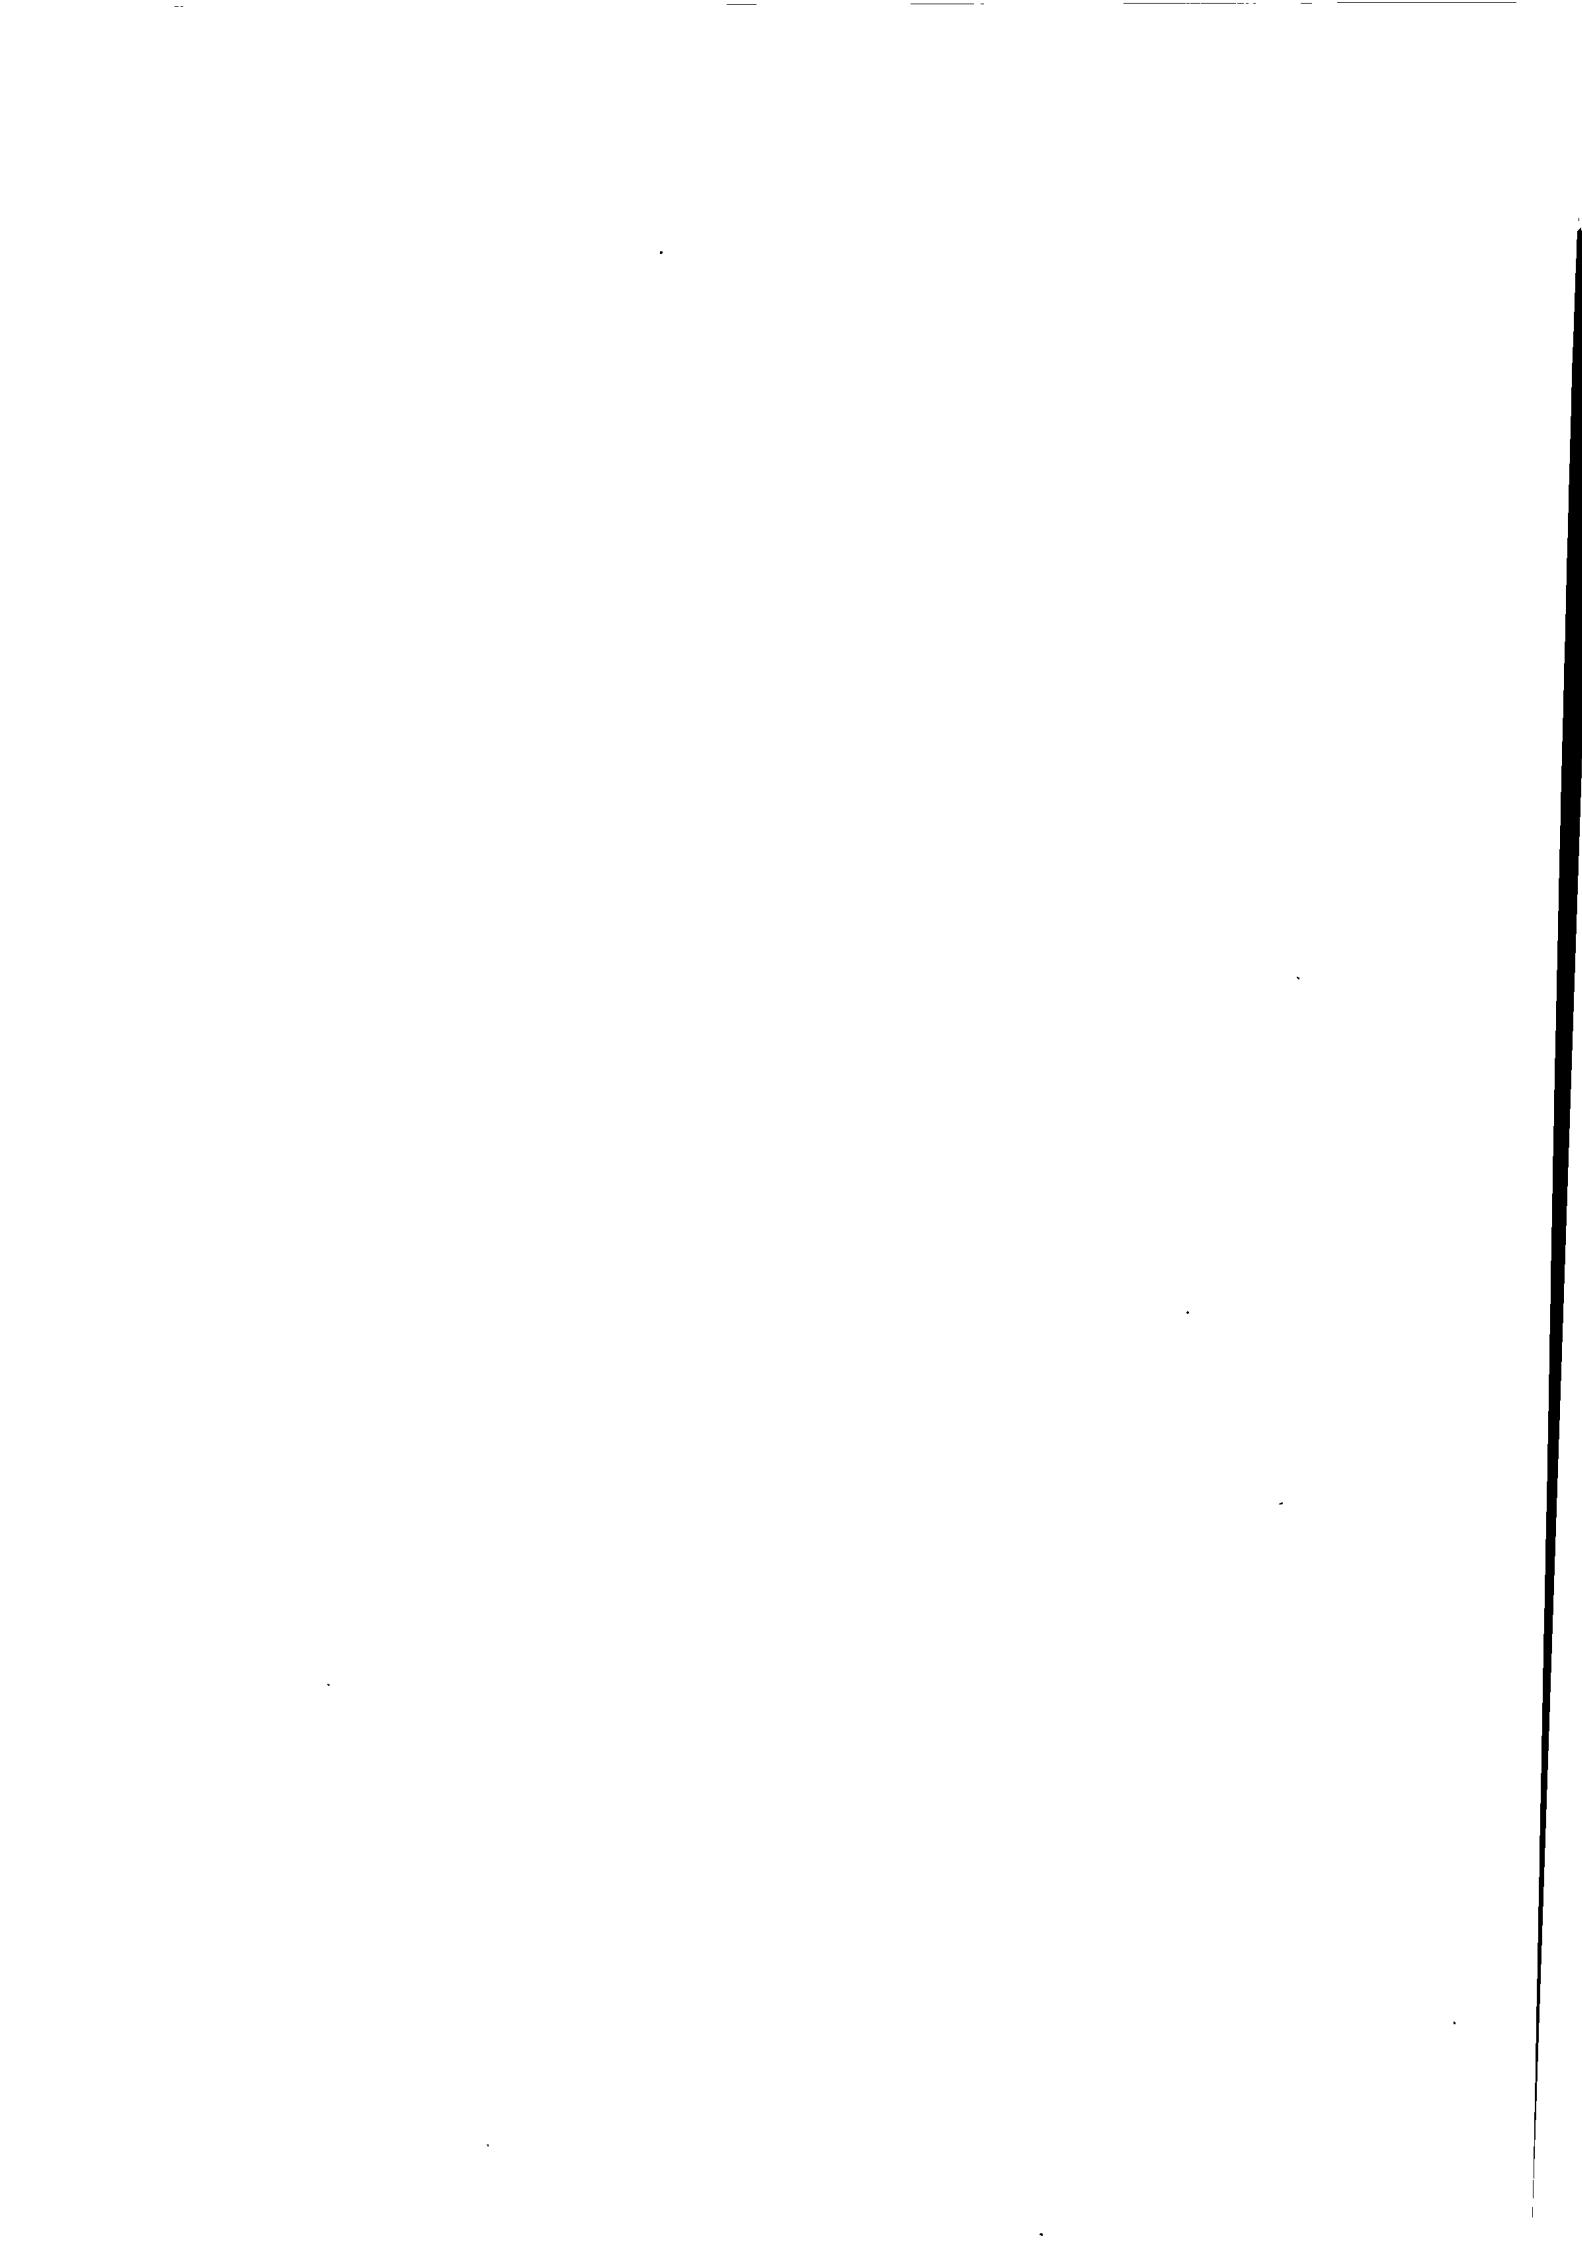

It is hoped that the data assembled in this digest will prove useful to all users, in particular to agricultural policy makers, planners and scientists. The preparation of this digest has required the co-operation of numerous organisations, both public and private. This co-operation is gratefully acknowledged.

(H. Bundhoo)

CONTENTS

SECTION 1 - SUMMARY TABLES - AGRICULTURAL SECTOR

		PAGE
Table 1.1	- Share of agriculture in the economy - Republic of Mauritius, 1997 - 2000	13
1.2	- Distribution of gross domestic product by industrial group, 1996 – 2000 (at basic prices and at current prices)	14
1.3	- Production account of agriculture - Republic of Mauritius, 1996 – 2000	15
1.4	- Value added at basic prices of agriculture (at current prices) by main product groups - Republic of Mauritius, 1996 – 2000	15
1.5	- Agricultural production, growth rate (% increase over previous year), 1998 – 2000	16
1.6	- Agricultural crops: area harvested and production, 1999 - 2000	17
1.7	- Production of agro-industrial products, 1999 - 2000	17
1.8	- Exports of sugar, agricultural and other products, 1996 – 2000	19
1.9	- Employment in agricultural, industrial and services sector (large establishments), March 1996 - March 2000	20
1.10	- Employment in the agricultural sector (large establishments), Republic of Mauritius, 1996 – 2000	21
1.11	- Employment in the agricultural sector (large and small establishments), Republic of Mauritius, June 2000	22

CONTENTS (Cont'd)

SECTION 2 - SUGAR INDUSTRY		PAGE
Table 2.1	- Production account of the sugar industry, 1998	25
2.2	- Production account of the sugar industry, 1999	26
2.3	- Area under sugar cane cultivation as at 30th June, 1999 - 2000	27
2.4	- Area harvested, cane production, cane yield for estates, metayers and owner-planters, 1991 – 2000	29
2.5	- Area harvested, cane production, cane yield of estates, metayers and owner-planters by region, 1999 – 2000	30
2.6	- Sugar crop 1999 (area harvested, cane produced, yield and sugar production by factory area)	31
2.7	- Sugar crop 2000 (area harvested, cane produced, yield and sugar production by factory area)	32
2.8	- Frequency distribution of owner and tenant planters, 1999 – 2000	33
2.9	- Production of sugar, molasses and scum, 1991 – 2000	35
2.10	- Supply and disposal of sugar, 1991 – 2000	36
2.11	- Monthly supply and disposal of sugar, 2000	37
2.12	- Sugar sales and revenue, crop year 1990/91 - 2000/01	39
2.13	- Sugar exports by main markets, crop year 1997/98- 2000/01	41
2.14	- Earnings of sugar producers-Ex-syndicate, before charging sugar insurance premium, 1996 – 2000	42
2.15	- Monthly average price of sugar at f.o.b. value (London daily price), 1991 – 2000	44
2.16	- Employment by sugar estates and large sugar cane planters, 1997 – 2000	45

CONTENTS (Cont'd)

SECTION 3 - TEA AND TOBACCO

		PAGE
Table 3.1	- Area under tea, 1996 – 2000	49
3.2	- Frequency distribution of individual plantations by size (hectares), 2000	49
3.3	- Production of green leaf of tea by type of producer, 1996 – 2000	50
3.4	- Production of black tea by factories, 1996 – 2000	51
3.5	- Exports of black tea (at current and constant 1982 prices), 1996 – 2000	52
3.6	- Exports of tea by country of destination, 1996 – 2000	53
3.7	- Tobacco: Area harvested, yield and production of leaf, 1996 – 2000	54
3.8	- Tobacco: Price paid to planters and value of production, 1996 – 2000	55

SECTION 4 - FOODCROPS

Table 4.1	- Area harvested and production of foodcrops, 1996 – 2000	59
4.2	- Average yield of selected foodcrops, 1991 - 2000	62
4.3	- Area harvested and production of foodcrops grown in interline plantations, 1998 - 2000	63
4.4	- Foodcrops: Monthly area harvested, 1999	64
4.5	- Foodcrops: Monthly area harvested, 2000	65
4.6	- Monthly production of foodcrops, 1999	66
4.7	- Monthly production of foodcrops, 2000	67
4.8	- Area harvested and production of foodcrops by district, 1996 – 2000	68
4.9	- Area harvested and production of beans and peas by district, 1996 – 2000	69
4.10	- Area harvested and production of potato by district, 1996 – 2000	70
4.11	- Area harvested and production of maize by district, 1996 – 2000	71

CONTENTS (Cont'd)

SECTION 4 - FOODCROPS (Cont'd)	PAGE
Table 4.12 - Area harvested and production of groundnut by district, 1996 – 2000	72
4.13 - Area harvested and production of onion by district, 1996 – 2000	73
4.14 - Area harvested and production of tomato by district, 1996 – 2000	74
4.15 - Area harvested and production of cabbage and cauliflower by district, 1996 – 2000	75
4.16 - Area harvested and production of creepers by district, 1996 – 2000	76
4.17 - Area harvested and production of other vegetables by district, 1996 – 2000	77
4.18 - Area harvested and production of banana by district, 1996 – 2000	78
4.19 - Area harvested and production of pineapple by district, 1996 – 2000	79
4.20 - Retail prices of foodcrops, 1999	80
4.21 - Retail prices of foodcrops, 2000	82
4.22 - Number of fruit trees (bearing/non-bearing) grown in backyard by species, 1985	84

SECTION 5 - LIVESTOCK AND FISHERIES

Table 5.1 - Cattle population for past Livestock Censuses, 1921 - 1983	87
5.2 - Number of cattle, goats, sheep and pigs by sex and type of breeder (1983 Livestock Census)	87
5.3 - Regional distribution of small cattle breeders by herdsize and number of cattle owned (1983 Livestock Census)	88
5.4 - Livestock slaughtered, 1996 – 2000	89
5.5 - Production of fish (in wet weight equivalent), 1991 - 2000	90

CONTENTS (Cont'd)

18 - Price index of fertilisers, 1991 – 2000	135
19 - Monthly rainfall, 1999 – 2000	137
20 - Monthly minimum temperature, 2000	140
21 - Monthly maximum temperature, 2000	140

TECHNICAL NOTES

1. Production Account : Shift from 1968 to 1993 System of National Accounts

Production accounts presented in this report have been prepared based on the concepts and definitions of the revised United Nations 1993 System of National Accounts (SNA93). Main changes affect the valuation of output which is at " basic prices" instead of "producers' prices".

Basic price is the amount receivable by the producer, exclusive of taxes payable on products and inclusive of subsidies receivable on products whilst **producers' price** is the amount receivable by the producer inclusive of taxes on products (except deductible value added tax) and exclusive of subsidies on products.

2. NSIC Rev 2 to NSIC Rev 3 (note to table 1.4)

All economic activities are now classified according to the National Standard Industrial Classification (NSIC) Rev 3, an adapted version of International Standard Industrial Classification (ISIC) Rev 3, 1990. Consequently, agricultural services produced by government, formerly grouped in " Producers of government services", are now shown under " Agriculture".

3. Activities of sugar producers (note to tables 2.1 and 2.2)

With the continuing increase in the production of electricity from bagasse and coal by firm "Independent Power Producers (IPP)" and sugar factories, output of such producers are now shown under "Electricity, Gas and Water" instead of under "Manufacturing", included in the output of sugar milling.

4. Regions (note to Table 2.5)

Regions	Corresponding Districts
North	Port Louis, Pamplemousses and Riviere du Rempart
South	Grand Port and Savanne
East	Flacq
West	Black River
Centre	Plaines Wilhems and Moka

5. Symbols and abbreviations

The following symbols and abbreviations are used throughout:

...	:	Negligible
—	:	Nil
Rs	:	Rupees (Mauritian)
'000	:	Thousand
M	:	Million
No.	:	Number
N.A.	:	Not available
n.e.s.	:	Not elsewhere specified

6. Conversion factors

1 hectare = 2.36922 arpents

1 inch = 25.4 millimetres

To convert degrees Celsius (Centigrade) into degrees

Fahrenheit multiply by 9/5 and add 32°

1 tonne = 1,000 kilograms = 0.9842 long ton

1999/00	373.2	5,380.0	373.2	5,380.0	-	-
2000/01	569.3	7,467.3	569.0	7,466.0	0.3	1.3

Notes: (1) Harvesting generally extends from June to December, while export and local sales are spread over the period 1st July to 30th June the following year.

(2) Production may not tally with exports and local sales due to loss or surplus in storage.

(3) Local sales for crop years 1995/96, 1996/97, 1997/98 do not include imports of white sugar destined for the local market.

FOOD BALANCE SHEET

Food Balance Sheet

General Notes

1. All data relate to the residents (i.e. excluding tourists) of the Island of Mauritius only (not its dependencies).

2. Quantity is in tonnes unless otherwise specified.

3. (a) Gross imports include imports from dependencies.

(b) Gross exports include exports to dependencies.

4. Estimated changes in stock:

A plus sign indicates that there has been a decrease in stock, that is, an increase in supply. A negative sign would mean the converse.

5. Data on production of foodcrops may not tally with production data published in other section since allowance has been made here for backyard production.

6. Local production of meat include imported live animals slaughtered in Mauritius. Estimates for off-abattoir slaughters have been included.

7. Data on fish and crustaceans are given in terms of wet-weight equivalent.

8. As from 1989 onward, population includes Mauritian residents and Mauritians residing abroad.

**PRODUCER PRICE INDEX –
AGRICULTURE**

(PPI – A)

(Base Year 1993 = 100)

Methodology & Producer Price Indices

METHODOLOGY FOR THE CONSTRUCTION OF THE PRODUCER PRICE INDEX – AGRICULTURE (PPI-A)

1. Introduction

The analysis of price data implies comparison of current and past prices. Comparison over time is required to study the price movement in order to understand the history and to indicate future outlook. While price relatives of single commodities can be studied in isolation, general conclusion can only be derived from averages, covering a given set or class of commodities. The indicators of average price changes are the price indices.

2. Purpose of the agricultural price indices

The purpose of the price indices is to provide information on trends in producer prices of agriculture products and purchase prices of the means of agricultural production.

The selling prices of agricultural products and the purchase of the means of production have a decisive influence on farmer's income. It would, therefore, seem useful to have indicators showing how agricultural revenue and expenditure are influenced by their price component.

The agricultural price indicators are of two types:-

- (i) Price received by farmers represent the producer prices of agricultural products (output prices)
- (ii) Prices paid by farmers are the purchase prices of agricultural requisites (input prices)

The two classes of prices mentioned above, are considered important in the context of economic analysis and agricultural policy decisions. Index numbers based on them show the average changes of these prices.

3. Uses of agricultural price indices

The construction of agricultural price index numbers may serve various purposes as shown below:-

- (i) Economic analysis, in particular the estimation of general price trends and their relationship with other pertinent variable, e.g. the study of domestic price changes in relation to prices observed in external markets or the movement of agricultural production.

- (ii) Monitoring the implementation of agricultural price policy decisions such as the introduction or modification of support prices.
- (iii) Forecasting price movements in connection with market studies or business cycle research.
- (iv) Compilation of national accounts at constant prices. In order to estimate the growth of the real product of the agricultural sector, deflator indices are needed. They are appropriately weighted indices of agricultural commodities or input items.

4. Frame for a system of agricultural price indices for Mauritius

It is the intention of the Central Statistics Office (CSO) to construct a battery of agricultural price indices from both the input as well as the output side. However, in the first instance, only the output price index for different groups of commodities has been compiled. Later on, an input price index will be constructed, and in the long run, it is proposed to have separate output price indices for sales on the local as well as the export market. It is to be noted that the index for the export market will refer to that part of production sold by the producer directly on the export market without going through local wholesale buyers who may subsequently export their purchases. At present, only a negligible proportion of agriculture products (mainly flowers) is exported directly by the producer without going through local wholesalers.

It is to be noted that international recommendations insist on a sharp line being drawn between sectors. In this respect, it must be mentioned that all sugarcane, which is a product of the agricultural sector, is sold on the local market although the bulk of sugar, which is produced by the manufacturing sector, is exported.

5. Definition of prices

A price is a pure price when the same amount of money refers to what the buyer pays and what the seller receives. Since the price series form the basis for calculation, the index of the output prices must be representative of what the farmer actually receives.

The prices must be recorded at a point in the marketing of the product which is as close as possible to the farmer. This means that the selling prices should be recorded at the farm-gate or (if this is not possible or advisable) at the next stage of the commodity flow.

In addition, as the prices must be representative of what the farmer actually receives, taxes and subsidies directly linked to the products must be taken into account. In Mauritius, there are no taxes on agricultural products. On the other hand, subsidies paid to the seller by the buyer are included (e.g. Agricultural Marketing Board for potatoes). It is to be noted that taxes on sugar, which is a product of the manufacturing sector, are not to be considered as taxes on sugarcane.

6. Price received by agricultural producers

As mentioned earlier, the prices for the index should be farm-gate prices, but this is not possible in many cases. Thus, farm-gate prices of vegetables are extremely difficult to obtain, not only because of the enormous resources to be mobilised but also because of the inexistence of a list of planters. Hence, in lieu of the farm-gate price, the wholesale price of the produce is recorded at the two auction markets located in Vacoas and Port-Louis.

As regards sugarcane , there is no actual market price for the product. The final price for a crop is only available after the crop year to which it refers. The solution has been found in such a way that for all months the last available final price per tonne is used which, however, is corrected afterwards as soon as the final price is available. The same procedure is applied to tea and tobacco.

7. Weighting Scheme and Choice of the base period

As price data are associated with commercial transaction, it is logical to relate prices to sales rather than total production. However, since value of production for the market (sales) is not available here, the value of total production is considered as a proxy in calculation of weights. The same method is used in several countries like Australia, Austria and Norway etc. Furthermore, since meteorological conditions and market forces may generate high fluctuations, the weight base is taken as the average of the total production for several years.

It may be noted that 'FAO' and 'Eurostat' recommend that if the quantity weight base is the average of 3 years, then the reference base for prices should be the middle year. However, we are using 1990-1991-1992 as the quantity weight base because this is the latest period for which production data are available whilst 1993 is the earliest year for which price data can be collected. The discrepancy which is methodologically regrettable is mitigated by the fact that only the quantities for the weights are taken from the period 1990-1992 and they are valued at average prices of 1993. Thus, at least as to the value component of the weights, they will be no big discrepancy. The procedure allows us to have an index right from now, otherwise, the collection of up-to-date data will necessitate weighting till 1995 to start the index.

The base weights are derived by multiplying the average production for 1990-1992 by the average unit price in 1993. The weight assigned to each commodity group is on the basis of total production (as a proxy for sales) pertaining to each group. At commodity level, the weights are apportioned within the commodity group on the basis of production of each product.

8. Type of index

The PPI will be calculated according to a modified Laspeyres formula:

$$I_t = \frac{\sum W_i (P_{ti}/P_{oi})}{\sum W_i} \times 100$$

Where :

I_t is the index for the current period t

P_{ti} is the price of commodity i in the current period t

P_{oi} is the price of the commodity i in the reference period o (1993)

W_i is the weight associated with commodity i

9. Commodity Coverage

The bulk of the products in agriculture, with the exception of forestry and fishing, is covered by the output price index. Thus, almost 95% of the total value of agricultural production is covered.

10. Observation Units

There are essentially three types of observation units for collecting producer prices: (i) producers (ii) purchasers and (iii) markets. However, in the context of Mauritius, different type of observation units are used for different commodities as shown below:

- (i) For main commercial crops (sugarcane, tea leaf and tobacco leaf etc.) the respective marketing agencies is the source of the price data.
- (ii) For vegetables, price data is obtained mainly at the two auction markets which are situated at Vacoas and Port Louis respectively.
- (iii) For fruits, price is recorded from different source such as planters and first middlemen.
- (iv) For animals and animal products, price data is available at sources varying from marketing agencies to producers.

11. Frequency of Price Collection

Frequencies of price collection vary from weekly for some commodities to only once a year in others. Broadly speaking the frequency of price collection is as follows:-

- (i) For vegetables, price data is collected once a week at the two auction markets.

(ii) For commodities for which prices are fairly stable, data suppliers are visited on a quarterly basis, but prices are collected for each month of the quarter.

Examples of such commodities are:-

(a) Crop products- potato, onion and garlic etc.

(b) Animals & animal products - cattle, pigs and cow's milk etc.

(iii) For the main commercial crops like sugarcane, tea leaf and tobacco leaf, the reported prices are normally fixed for the crop year by the respective marketing agencies.

(iv) For the remaining type of items not mentioned above, the price data is collected on a monthly basis.

12. Seasonality

Prices and quantities of many agricultural commodities show seasonal variations. As vegetables and fruits are extremely seasonal products, it is therefore decided to use the method of variable baskets with fixed monthly weights in the base year.

There are 12 monthly baskets of representative products. The composition of these baskets varies each month. Certain products whose marketing period covers the whole year appear in all 12 monthly baskets, while others, which are more seasonal, appear only in some of them. However, the composition of the basket for a given month is fixed over time.

13. Missing prices

There is also in the field of agricultural price observation the case of missing prices for a product which must be taken into account because there is an index weight for the respective month. In such a case, it is recommended that a fictitious price be used; the least bad way, which is to make use of the last real price, has been adopted.

14. Periodicity

It is proposed to calculate the index on a monthly, quarterly as well as on an annual basis. While normally annual price indices can be calculated as the simple (unweighted) average of the monthly indices, it is recommended that the monthly sales figures for the base year be used as weights to calculate the annual index. This is the procedure that will be adopted.

Monthly Producer Price Index -Agriculture (PPI-A)

(Base period: Year 1993=100)
