DIGEST OF AGRICULTURAL STATISTICS – 2003

F O R E W O R D

This is the twentieth issue of a regular publication of the Central Statistics Office on Agricultural Statistics for the Republic of Mauritius. It contains for the first time some metadata on agricultural statistics and an overview of the main indicators of the sector.

The digest is published annually and is designed to bring together in a single report as many series as possible on agricultural statistics. It thus contains information on the sugar, tea, tobacco, foodcrops, livestock and fisheries sectors. Data showing the pattern of food consumption of the population are given in the yearly "Food Balance Sheets". Agricultural price statistics are shown in the section "Producer Price Index - Agriculture (PPI-A)".

The data published cover in general the five-year period from 1999 to 2003 and are the latest available as at mid June 2004. Some of the figures are provisional and subject to revision in later issues. Figures in this issue supersede those appearing in previous ones. Furthermore, historical series of main agricultural statistics can be accessed from the CSO website: <http://statsmauritius.gov.mu>.

It is hoped that the data assembled in this digest will meet the diverse needs of many users, in particular agricultural policy makers, planners and scientists.

The cooperation of the many contributors, private organisations and public agencies, to this publication is gratefully acknowledged.

(H. Bundhoo)

Director of Statistics

1. General	9
2. Definitions	9
3. Technical notes	10
PART II – SOURCES AND METHODS	
1. Production Account	11
1.1 Agriculture, hunting, forestry and fishing	11
1.2 Sugar Industry	14
PART III – STATISTICAL TABLES AND ANALYSIS	
1. Overview of main agricultural statistics - 2003	17
SECTION 1 - SUMMARY TABLES - AGRICULTURAL SECTOR	
Table 1.1 - Share of agriculture in the economy, Republic of Mauritius, 2000 – 2003	23
1.2 - Distribution of gross domestic product by industrial group, Republic of Mauritius, 1999 – 2003	24
1.3 - Production account of agriculture, Republic of Mauritius, 1999 – 2003	25
1.4 - Value added of agriculture at basic prices by main product group, Republic of Mauritius, 1999 – 2003	25
1.5 - Agricultural production, growth rate (% increase over previous year), 2001 – 2003	26
1.6 - Agricultural crops: area harvested and production, 2002 – 2003	27
1.7 - Production of agro-industrial products, 2002 – 2003	27
1.8 - Exports of sugar, agricultural and other products, 1999 – 2003	29

CONTENTS (cont'd)

		Page
Table 1.9	- Employment in agricultural, industrial and services sectors (large establishments), Republic of Mauritius, March 1999 – March 2003	30
1.10	- Employment in the agricultural sector (large establishments), Republic of Mauritius, March 1999 – March 2003	31
1.11	- Employment in the agricultural sector (large and small establishments), Republic of Mauritius, June 2002 – June 2003	32

SECTION 2 - SUGAR INDUSTRY STATISTICS

2.1	- Production account of the sugar industry, 2001	35
2.2	- Production account of the sugar industry, 2002	36
2.3	- Area under sugar cane cultivation, 2002 - 2003 (as at 30th June)	37
2.4	- Area harvested, cane production, cane yield for estates, metayers and owner-planters, 1994 – 2003	39
2.5	- Area harvested, cane production, cane yield of estates, metayers and owner-planters by region, 2002 – 2003	40
2.6	- Sugar crop 2002 (area harvested, cane produced, yield and sugar production by factory area)	41
2.7	- Sugar crop 2003 (area harvested, cane produced, yield and sugar production by factory area)	42
2.8	- Distribution of owner and tenant planters by size of plantation, 2002 – 2003	43
2.9	- Production of sugar, molasses and scum, 1994 – 2003	45
2.10	- Supply and disposal of sugar, 1994 – 2003	46
2.11	- Monthly supply and disposal of sugar, 2003	47

CONTENTS (cont'd)

PART I - INTRODUCTION

1. General

All tables in this issue refer to the Island of Mauritius unless otherwise specified. The 1993 Systems of National Accounts (1993 SNA) has been used for the compilation of production accounts.

2. Definitions

2.1 Basic price

Basic price is the amount receivable by the producer, exclusive of taxes payable on products and inclusive of subsidies receivable on products.

2.2 Producer's price

Producer's price is the amount receivable by the producer inclusive of taxes on products (except deductible value added tax) and exclusive of subsidies on products.

2.3 Purchaser's price

Purchaser's price is the amount payable by the purchaser. This includes trade and transport margins and non-deductible VAT.

3. Technical Notes

3.1 Regions (note to Table 2.5)

<u>Regions</u>	<u>Corresponding districts</u>
North	Port Louis, Pamplemousses and Riviere du Rempart
South	Grand Port and Savanne
East	Flacq
West	Black River
Centre	Plaines Wilhems and Moka

3.2 Symbols and abbreviations

Symbols:

- ... : Negligible
- : Nil

Abbreviations:

- Rs : Mauritian Rupees
- '000 : Thousand
- No. : Number
- N.A : Not available
- n.e.s : Not elsewhere specified
- c.i.f : Cost, insurance and freight
- f.o.b : Free on board

3.3 Conversion factors

1 hectare = 2.36922 arpents

1 arpent = 100 perches

1 perche = 11 toises

1 inch = 25.4 millimetres

1 tonne = 1,000 kilograms = 0.9842 long ton

1 hectolitre = 100 litres

To convert degrees Celsius (Centigrade) into degrees Fahrenheit multiply by 9/5 and add 32⁰

Part II – SOURCES AND METHODS

1. Production account

1.1 Agriculture, hunting, forestry and fishing

The activities in this sector are presented in the following sub-groups:

- Industrial crops (sugar cane, tea and tobacco)
- Foodcrops, fruits and flowers
- Livestock, poultry and related products
- Forestry and hunting
- Fishing
- Agricultural services
- Government services

Data sources:

- Ministry of Agriculture, Food Technology and Natural Resources
- Mauritius Chamber of Agriculture
- Mauritius Sugar Syndicate
- Agricultural Research and Extension Unit (AREU)
- Ministry of Fisheries
- Mauritius Meat Authority (MMA)
- Special enquiries from foodcrop planters, livestock and poultry breeders and providers of agricultural services
- Accountant-General's Department and extra budgetary agencies (e.g Irrigation Authority, Farmers Service Centre, etc)

Methodology

Separate production accounts are prepared for each of the above sub-groups. The methodology adopted varies with the source of information. Apart from sugar and tea, agricultural activities are performed mainly by small planters, breeders and fishermen who do not keep proper records of their transactions. Because of the lack of proper accounts, a variety of methods, based essentially on the commodity approach, is used to estimate gross output, intermediate consumption and value added.

(i) Industrial crops

Sugar cane : Details on the sugar industry are given separately in Section 1.2.

Tea and Tobacco : Quantities and prices of tea and tobacco leaves are available from the Tea and Tobacco Board respectively. Intermediate inputs per hectare are computed based on information obtained from a few tea estates and tobacco planters. Total intermediate consumption is then obtained by applying the appropriate rates of inputs to the total area under cultivation.

(ii) Foodcrops, fruits and flowers

Foodcrops : Data on foodcrops production and area harvested are obtained from AREU on a monthly basis. Estimates of backyard production are made on the basis of consumption data collected through the Household Budget Surveys. It is to be noted that production from **greenhouses** is not covered. Retail prices of about forty foodcrops and fruits are collected weekly by the Consumer Price Index unit. This enables the valuation of each product at basic price by deducting transport cost and retail margin from its retail price value.

Adhoc production cost surveys are regularly carried out to provide the necessary information on inputs. Intermediate consumption expenditure is then worked out by applying appropriate rates of inputs to the total acreage under cultivation. Some of the inputs, for example fertilizers, pesticides, seeds are cross-checked with imports and local production figures.

Fruits and flowers : Monthly area harvested and production of banana and pineapple are obtained from AREU. As regards other fruits, the number of trees in bearing age is based on the "1985 Fruit Trees Survey" carried out by the Extension Service Division of the Ministry of Agriculture, Fisheries and Natural Resources. Production is estimated using average yield per tree, taking into account the climatic factor. This production is valued at basic prices.

The main source of data for estimating gross output of flowers is export data. A separate estimate is worked out for locally sold flowers, based on the number of weddings, deaths, religious ceremonies, etc.

(iii) Livestock, poultry and related products

The Mauritius Meat Authority (MMA) forwards a monthly return on the number of heads and carcass weight of local/imported cattle, sheep, goats and pigs slaughtered at the abattoir. To these, are added the weight of off-abattoir slaughters estimated from permits issued by the Ministry of Agriculture, Food Technology and Natural Resources. The total quantity multiplied by a weighted average "retail price less transport cost and retail margin" gives the gross output at basic prices. Estimates of intermediate expenditure on cattle feed, salt and water etc. are made and deducted from the gross output to obtain value added.

Data on poultry and egg production are obtained through the questionnaires sent to all large producers. These data are supplemented with estimates made for small breeders and backyard production, based on the number of broilers and on the quantity of feeds they purchased.

Data on milk production are obtained from the Animal Production Division of the Ministry of Agriculture, Food Technology and Natural Resources.

(iv) Forestry and hunting

Estimates of forestry production, namely wood processed by sawmills and, to a lesser extent, firewood are made on the basis of information obtained from the Forestry Department.

Deer hunting is undertaken during a specific period of the year. The associations of hunters provide data on the production of venison. This is valued at basic prices as for other livestock.

Intermediate costs for both forestry and hunting are negligible so that the gross output is composed essentially of value added.

(v) Fishing

The Ministry of Fisheries provides data on the quantity of fish caught. Separate figures are given in respect of lagoon and bank fishing. These are then valued at basic prices by deducting transport cost and retail margin from its retail price value. Intermediate inputs for lagoon fishing are very low as the fishermen who are engaged in fishing in coastal waters, use artisanal methods and the catch is usually sold fresh. Bank fishing involves higher costs as the fish are caught in high seas in larger vessels. Establishments engaged in bank fishing are surveyed by a mail questionnaire and a production account is worked out from information thus received.

(vi) Agricultural services

(a) Government

The government accounts are prepared by the Accountant-General's Department. The Government agricultural services cover all agricultural services falling under the Ministry of Agriculture, Food Technology and Natural Resources, excluding the central administration of the Ministry.

Gross output, valued as the sum of production costs, is estimated as follows:

$$\begin{aligned}\text{Gross output} &= \text{Intermediate consumption} \\ &\quad + \text{compensation of employees} \\ &\quad + \text{consumption of fixed capital}\end{aligned}$$

(b) Non-government

Establishments engaged in non-government agricultural services provide services like land preparation, derocking, etc. Their respective production accounts are worked out from statistics obtained from direct surveys.

1.2 Sugar industry

Value added generated by the sugar industry is attributed, for national accounting purposes, to the following industrial activity groups:

Agriculture: the final product is sugar cane. Both millers and planters are engaged in its production.

Manufacturing: the final product is sugar and its by-products - molasses, scum and electricity which excludes Independent Power Producers (IPPs). Only millers are engaged in this activity.

Transport: includes only the millers' own account transport of sugar cane, sugar and other inputs.

Distribution: includes activities of brokers, shippers and the Mauritius Sugar Syndicate.

(a) Methodology

The period from the growing stage up to the marketing of all sugar produced covers eighteen months. Production is valued on an accrual basis, so that output relating to crop year, say, 2002/2003 is treated as production for calendar year 2002. The sugar cane crop of a given year normally extends from July to June of the following year.

Sugar is marketed solely through the Mauritius Sugar Syndicate. This agency provides data on value and price of sugar, both local sales and exports' proceeds. All the expenses incurred in respect of marketing are also given.

Production accounts of all sugar estates with factories are worked out from the aggregated data on expenditure presented in the statements: "Analysis of expenditure of Sugar Estate with Factories" and "Analysis of production costs", compiled by the Mauritius Chamber of Agriculture.

The items of expenditure therein are scrutinised and then allocated to the intermediate expenses of the respective industrial activity groups mentioned in Section 1.2.

(b) Production accounts

Separate accounts are prepared in respect of millers and planters.

The gross proceeds from the sales of sugar and its by-products are obtained from the Mauritius Sugar Syndicate. The gross output of agriculture comprises 76% of the gross proceeds as the remaining 24% accrues to millers to cover the milling cost.

Intermediate expenses in respect of sugarcane cultivation owned by millers are extracted from the statements provided by the Mauritius Chamber of Agriculture. As regards owner planters, the country is divided into four main regions and detailed production cost per arpent is prepared regionwise based on information collected from personal interviews of planters. Intermediate consumption also takes into consideration expenditure incurred on new plantations – a 'ratooning' cycle of 10 years is assumed.

Manufacturing: The gross output is worked out from the gross proceeds of sugar. The main item under goods consumed is sugarcane; other inputs include milling cost and marketing expenses which are obtained from the Mauritius Chamber of Agriculture and the Mauritius Sugar Syndicate.

Transport: The sugar estates and millers provide their own means of transport. Most of their canes, sugar and other inputs are transported by their own lorries. The 'Transport' activity is valued at cost. The expenditure incurred in respect of purchases of materials and services, compensation of employees and consumption of fixed capital are obtained from the statement, "Analysis of expenditure of Sugar Estates with Factories" published by the Mauritius Chamber of Agriculture. The total of these aggregates gives the gross output. Transport cost is then imputed, on a pro-rata basis, to the intermediate consumption expenditure of the agriculture and manufacturing sectors.

Distribution: The gross output is computed from the related expenditure items as given in the Mauritius Sugar Syndicate report. The cost component consists mainly of elements of value added.

PART III – STATISTICAL TABLES AND ANALYSIS

1. Overview of main agricultural statistics – 2003

1.1 Value added of agriculture

Value added at current basic price for the agricultural sector reached Rs 8,546 million in 2003 from Rs 7,928 million in 2002, representing an increase of 7.8 %. In real terms, it grew up by 2.5% and this is the combined effect of increases of 3.1% and 1.8% in sugar cane and “other agriculture” respectively. (Table 1.1)

1.2 Share of agriculture in GDP

The contribution of agriculture in GDP has slightly decreased from 6.3% in 2002 to 6.2% in 2003. (Table 1.1)

The share of the sugar industry in GDP was around 3.3%.

1.3 Employment in agriculture

Employment in agriculture declined by 1.2% from 46,966 in 2002 to reach 46,420 in 2003, mainly due to the combined effect of a drop of 8.0% in “sugar cane” and a rise of 6.0% in “other agricultural activities”. The share of agriculture in total employment was 9.4% in 2003 as compared to 9.6% in 2002. (Table 1.11)

It is to be noted that the “Voluntary Retirement Scheme (VRS)” in the sugar industry started in 2001 and by December 2002, around 7,900 workers of the sugar industry had already opted for VRS. This exercise will continue till centralisation of the sugar industry is completed.

1.4 Sugar cane

Figures refer to the crop year, that is starting in July of the reference year up to June of the following year. Sugar cane fields are classified according to agro-climatic conditions in the following five regions: North, South, East, West and Centre.

The area under sugar cane in 2003 was 74,117 hectares, which is 1.8% lower than the 75,501 hectares in 2002. (Table 2.3)

An area of 70,998 hectares under sugar cane was harvested in 2003 as compared to 72,267 hectares in 2002, showing a reduction of 1.8%. (Table 2.4)

The cane yield per hectare for the whole island went up by 8.6% from 67.4 tonnes in 2002 to 73.2 tonnes in 2003. In fact, all five regions showed increases in cane yield as follows: North (22.9%), West (10.6%), East (6.3%), South (3.6%) and Centre (1.6%). The low yield in

2002 was mainly due to the passage of cyclone Dina in January of the same year. (Tables 2.4 and 2.5)

In 2003 production of cane increased by 6.7%, from 4,873,897 tonnes in 2002 to 5,199,384 tonnes. However, the average extraction rate fell by 3.4% to 10.34% as compared to 10.70% in 2002 as a result of unfavourable climatic conditions prevailing during the maturation stage of the cane. (Tables 2.5 and 2.9)

The production of sugar amounted to 537,155 tonnes, that is 3.1% higher than the figure of 520,887 tonnes in 2002. Out of this volume, 536.5 thousand tonnes were exported for a total value of Rs 9,150.0 million, representing a rise of 11.0% over the proceeds of 2002. (Tables 2.9 and 2.12)

The amount of molasses produced in 2003 was 160,041 tonnes as compared to 140,814 tonnes in 2002, representing an increase of 13.7%. On the other hand, scum production dropped by 2.2% from 277,367 tonnes to 271,239 tonnes. (Table 2.9)

The average ex-syndicate price of sugar for 2003 was Rs 15,200 as compared to Rs 14,047, representing a rise of 8.2% as a result of the appreciation of the Euro currency. (Table 2.14)

1.5 Tea

The area under tea plantation in 2003 was 681 hectares, almost the same as the previous year. (Table 3.1)

Production of green tea leaves increased by 1.5% from 6,870 tonnes in 2002 to 6,973 tonnes in 2003 while that of black tea went up by 4.0% from 1,381 tonnes to 1,436 tonnes. (Tables 3.3 and 3.4)

The quantity of green and black tea exported rose by 29.7% from 40.4 tonnes in 2002 to 52.4 tonnes in 2003, while the earnings from the export of tea registered a significant rise of 44.4% from Rs 7.2 million to Rs 10.4 million. (Tables 3.5 and 3.6)

1.6 Tobacco

An area of 379 hectares under tobacco cultivation was harvested in 2003, which is 11.5% higher than the 340 hectares in 2002. (Table 3.7)

Production of tobacco leaves declined by 11.1% from 477 tonnes to 424 tonnes, consequent to the leaf necrosis disease. Virginia (flue-cured) leaves production declined by 19.4% while that of Amarello (air-cured) rose considerably by 97.1%. (Table 3.7)

In 2003 the quantity of tobacco used in cigarette manufacture registered a fall of 4.4% from 679.6 tonnes to 711.2 tonnes in 2002, with imported leaf dropping by 27.7% while domestic leaf rising by 2.4%. (Table 3.8)

1.7 Foodcrops

The area under foodcrops harvested in 2003 was almost the same as in the previous year, that is 7,228 hectares against 7,262 hectares. (Table 4.1)

The production of foodcrops decreased slightly by 0.4% from 103,876 tonnes to 103,455 tonnes. During this period, the following changes were registered for the main foodcrops: beans (-10.3%), brinjal (-11.1%), cabbage (-23.9%), calabash (+20.3%), carrot (-41.6%), chouchou (-25.2%), cucumber (+18.3%), onion (-41.2%), potato (-7.3%), pumpkin (+23.1%), tomato (+12.9%), banana (+67.9%) and pineapple (+138.0%). (Table 4.1)

1.8 Livestock

The number of livestock by type as at March 2003 was as follows: cattle (9,156), goat (20,330), sheep (409) and pigs (13,176). (Table 5.1)

The production of beef from live cattle increased by 3.2% in 2003 to reach 2,505 tonnes against 2,428 tonnes in 2002. Beef production from the slaughter of imported cattle went up by 3.7%, from 2,221 tonnes to 2,303 tonnes whilst local beef production (including live cattle from Rodrigues) fell by 2.9%, from 208 tonnes to 202 tonnes. Local production accounts for only 8.1% of total beef production. (Table 5.3)

On the other hand, goat meat and mutton production dropped by 6.1% from 114 tonnes to 107 tonnes. The share of local production, inclusive of imports from Rodrigues, was 32.6%. (Table 5.3)

Production of pork went up by 3.8% from 756 tonnes in 2002 to 785 tonnes in 2003. (Table 5.3)

1.9 Fish

In 2003 total fish production amounted to 9,449 tonnes, that is an increase of 1.4% over the previous year. Fresh coastal fish catch registered a fall of 6.0% and on the other hand, other catch (tuna, bank, etc) increased by 3.8%. (Table 5.4)

1.10 Producer Price Index-Agriculture (PPI-A)

The Producer Price Index – Agriculture measures the average change in the selling prices which producers receive for agricultural products. In 2003 the index stood at 121.6, representing an increase of 3.5% over 2002. During the year, the producer prices of sugar cane went up by 4.5%. Increases were also registered in prices of fresh vegetables (+1.3%), poultry (+2.5%) and eggs (+0.7%). (Table 7.2)

FOOD BALANCE SHEETS

Food Balance Sheets

General Notes

1. All data relate to the residents (i.e. excluding tourists) of the Island of Mauritius only (not its dependencies).

2. Quantity is in tonnes unless otherwise specified.

3. (a) Gross imports include imports from dependencies.

(b) Gross exports include exports to dependencies.

4. Estimated changes in stock:

A negative sign (-) against "stocks" denotes decrease in supply; the absence of a sign signifies increase in supply.

5. Data on production of foodcrops may not tally with production data published in other sections since allowance has been made here for backyard production.

6. Local production of meat include imported live animals slaughtered in Mauritius. Estimates for off-abattoir slaughters have been included.

7. Data on fish and crustaceans are given in terms of wet-weight equivalent.

8. As from 1989 onward, population includes Mauritian residents and Mauritians residing abroad.

**PRODUCER PRICE INDEX –
AGRICULTURE**

(PPI – A)

(Base Year 1997 = 100)

PRODUCER PRICE INDEX - AGRICULTURE (PPI-A)

Methodology for the construction of the PPI-A

Weighting scheme

The weights are derived by multiplying the average of production during 1996, 1997 and 1998 by the average of unit prices in 1997, the reference period. The weight is assigned to each commodity group on the basis of total production (as a proxy for sales) pertaining to the particular group. At commodity level, the weights are apportioned within the commodity group on the basis of production of each product.

Quarterly and annual indices have been computed using a weighting system based on the production value for the base period.

Price collection

In principle, prices collected should refer to farm-gate prices, but it is extremely difficult to obtain such prices for vegetables, not only because of the enormous resources to be mobilised but also because of the unavailability of a list of planters. Hence, in lieu of the farm-gate price, the wholesale price of the produce is recorded at the two auction markets (Vacoas and Port-Louis) once a week.

In the case of commodities for which prices are fairly stable, data suppliers are visited on a quarterly basis, but prices are collected for each month of the quarter.

Prices of the main commercial crops like sugarcane, tea leaf and tobacco leaf, which are normally fixed for the crop year, are supplied by the respective marketing agencies.

Conversion factors

<u>Vegetable</u>	<u>Average weight per unit(kg)</u>
Beet	0.3
Cabbage	1.09
Cauliflower	1.04
Cucumber	0.4
Leek	0.12
Lettuce	0.15
Petsai	1.2
Squash	0.3
Sweet pepper	0.046

<u>Fruit</u>	<u>Average weight per unit(kg)</u>
--------------	------------------------------------

Banana	0.125
Litchi	0.025
Mango	0.15
Mandarine	0.1
Pineapple	0.5
Watermelon	1.5
Coconut	0.5

<u>Poultry product</u>	<u>Average weight per unit(kg)</u>
------------------------	------------------------------------

Egg	0.055
-----	-------

Index calculation

The PPI-A is calculated according to a modified Laspeyres formula:

$$I_t = \frac{\sum W_i (P_{ti}/P_{oi})}{\sum W_i} \times 100$$

where :

I_t is the index for the current period t

P_{ti} is the price of commodity i in the current period t

P_{oi} is the price of the commodity i in the reference period o (1997)

W_i is the weight associated with commodity i
