DIGEST OF AGRICULTURAL STATISTICS – 2009

FOREWORD

This is the twenty-six issue of a regular publication of the Central Statistics Office on agricultural statistics for the Island of Mauritius, unless otherwise specified. It contains metadata on agricultural statistics and an overview of the main indicators of the sector.

The digest is published annually and is designed to bring together in a single report as many series as possible on agricultural statistics. It thus contains information on the sugar, tea, tobacco, food crops, livestock and fisheries sectors. Data showing the pattern of food consumption of the population are given in the yearly "Food Balance Sheets". Agricultural price statistics are shown in the section "Producer Price Index - Agriculture (PPI-A)". All data relate to the Island of Mauritius, unless otherwise specified.

The data published cover in general the five-year period from 2005 to 2009 and are the latest available as at mid-June 2010. Some of the figures are provisional and subject to revision in later issues. Figures in this issue supersede those appearing in previous ones. Furthermore, historical series of main agricultural statistics can be accessed from the CSO website: <http://statsmauritius.gov.mu>

It is hoped that the data assembled in this digest will meet the diverse needs of users, in particular agricultural policy makers, planners and scientists.

The preparation of this report has necessitated the mobilization of considerable resources and the cooperation of numerous organizations, both public and private. Their assistance is gratefully acknowledged.

(L. F. Cheung Kai Suet)

PART I - INTRODUCTION

1. General

All tables in this issue refer to the Island of Mauritius unless otherwise specified. The 1993 Systems of National Accounts (1993 SNA) has been used for the compilation of production accounts. Figures for section 1 (except tables 1.6 & 1.7) and section 6 (except figure 15) pertain to the Republic of Mauritius and have been adjusted to include backyard foodcrop production.

2. Definitions

2.1 Basic price

The basic price is the amount receivable by the producer exclusive of taxes payable on products and inclusive of subsidies receivable on products. The equivalent for imported products is the c.i.f (cost, insurance and freight) value, that is, the value at the border of the importing country.

2.2 Purchaser's price

Purchaser's price is the amount payable by the purchaser. This includes trade margins realized by wholesalers and retailers as well as transport margins (that is, any transport charges paid separately by the purchaser) and non-deductible VAT.

3. Technical Notes

3.1 Rounding of figures

It is to be noted that in some tables totals may not add up due to independent rounding of figures.

3.2 Regions (note to Table 2.5)

| <u>Regions</u> | <u>Corresponding districts</u> |
|----------------|--|
| North | Port Louis, Pamplemousses and Riviere du Rempart |
| South | Grand Port and Savanne |
| East | Flacq |
| West | Black River |
| Centre | Plaines Wilhems and Moka |

3.3 Symbols and abbreviations

Symbols:

... : Negligible
 — : Nil

Abbreviations:

Rs : Mauritian Rupees
 '000 : Thousand
 No. : Number
 N.A : Not available
 n.e.s : Not elsewhere specified
 c.i.f : Cost, insurance and freight
 f.o.b : Free on board

3.4 Conversion factors

1 hectare = 2.36922 arpents

1 arpent = 100 perches

1 perche = 11 toises

1 inch = 25.4 millimetres

1 tonne = 1,000 kilograms = 0.9842 long ton

1 hectolitre = 100 litres

To convert degrees Celsius (Centigrade) into degrees Fahrenheit multiply by 9/5
 and add 32⁰

Part II – SOURCES AND METHODS

1. Production Account

1.1 Agriculture, hunting, forestry and fishing

The activities in this sector are presented in the following sub-groups:

Industrial crops (sugar cane, tea and tobacco)

Food crops, fruits and flowers

Livestock, poultry and related products

Agricultural services

Forestry and hunting

Fishing

Government services

(i) Data sources

Ministry of Agro Industry & Fisheries

Mauritius Chamber of Agriculture

Mauritius Sugar Syndicate

Agricultural Research and Extension Unit (AREU)

Mauritius Meat Authority (MMA)

Annual Survey of Employment and Earnings

Household Budget Surveys

Special enquiries from food crop planters, livestock and poultry breeders and providers of agricultural services

(ii) Methodology

Separate production accounts are prepared for each of the sub-groups mentioned above. Apart from sugar and tea, agricultural activities are performed mainly by small planters, breeders and fishermen who do not keep proper records of their transactions. Because of the lack of proper accounts, a variety of methods, based essentially on the commodity flow approach, is used to estimate gross output, intermediate consumption and value added.

(a) Industrial crops

Sugar cane: Details on the sugar industry are given separately in Section 1.2.

Tea and Tobacco: Quantities and prices of tea and tobacco leaves are available from the Tea and Tobacco Board respectively. Intermediate inputs per hectare are computed based on information obtained from a few tea estates and tobacco planters. Total intermediate consumption is then obtained by applying the appropriate rates of inputs to the total area under cultivation.

(b) Food crops, fruits and flowers

Food crops: Since July 1997, monthly data on food crops production and area harvested are obtained from the Agricultural Research and Extension Unit (AREU), which accounts for about 80% of total production. Estimates of backyard production are made on the basis of consumption data collected through the Household Budget Surveys. Retail prices of about forty food crops and fruits are collected weekly by the Prices unit. This enables the valuation of the output for each product at basic price by deducting transport costs and retail margin from its retail price value.

Ad-hoc production cost surveys are regularly carried out to provide the necessary information on inputs. Intermediate consumption expenditure is then estimated by applying appropriate rates of inputs to the total acreage under cultivation. Some of the inputs, for example fertilizers, pesticides, seeds are cross-checked with imports and local production figures.

Fruits and flowers: Monthly production of banana and pineapple and area harvested are obtained from AREU. As regards other fruits, the number of fruit trees in bearing age is estimated based on the "1985 Fruit Trees Survey" carried out by the Extension Service Division of the Ministry of Agro Industry and Fisheries. Production is first estimated in quantity using an average yield per tree, taking into account the climatic factor. This production is valued at basic prices.

The main source of data for estimating production of flower is exports data from the Foreign Trade unit. A separate estimate is worked out for locally sold flowers, based on the number of weddings, deaths, religious ceremonies, etc.

(c) Livestock, poultry and related products

The Mauritius Meat Authority (MMA) forwards a monthly return on the number of heads and carcass weight of local/imported cattle, sheep, goats and pigs slaughtered at the Abattoir. To these, are added the weight of off-abattoir slaughters estimated from permits issued by the Ministry of Agro Industry and Fisheries. The total quantity multiplied by a weighted average retail price gives the gross output at basic prices (after deducting retail margins and transport costs). Estimates of intermediate expenditure on cattle feeds, salt and water etc. are made and deducted from the gross output to obtain value added.

Poultry and egg production are calculated from data obtained through the questionnaires sent to all large producers. These data are supplemented with estimates made for small breeders.

Estimates of backyard production are based on the number of broilers sold by the large establishments and on the quantity of feeds sold.

Estimates of milk production are obtained from the Animal Production Division of the Ministry of Agro Industry and Fisheries.

(d) *Agricultural Services*

(a) Government

Total output is valued as the sum of production costs and is estimated as follows:

Gross output = Intermediate Consumption
+ Compensation of employees
+ Consumption of fixed capital

The government accounts are prepared by the Accountant General's Department. The expenditure items in the recurrent budget are carefully scrutinised and classified in categories such as compensation of employees, intermediate consumption, capital expenditure, transfers, etc. Likewise, items of expenditure in the capital budget are examined and classified under capital formation, intermediate consumption, capital transfer, etc. For other units, data are extracted from their financial accounts.

(b) Non-government

Establishments engaged in non-government agricultural services provide services like land preparation, de-rocking, etc. Their respective production accounts are worked out from statistics obtained either from published reports or from direct surveys.

(e) *Forestry and hunting*

Estimates of forestry production namely, wood processed by sawmills and, to a lesser extent, firewood are made on the basis of information obtained from the Forestry Department.

Hunting, mainly deer hunting, is undertaken during a specific period of the year. The associations of hunters provide data on the production of venison. This is valued at basic prices as for other livestock.

Intermediate costs for both forestry and hunting are negligible so that the gross output is composed essentially of value added.

(f) *Fishing*

The Ministry of Agro Industry and Fisheries provides data on the quantity of fish caught. Separate figures are given in respect of lagoon and bank fishing. These are then valued at market prices available from the Prices unit. The transport and retail margins are estimated and deducted from the market price value to give gross output at basic prices. Intermediate inputs for lagoon fishing is very low as the fishermen who are engaged in fishing in coastal waters, use

artisanal methods and the catch is usually sold fresh. Bank fishing involves higher costs as the fish are caught in high seas in larger vessels. Also, these fish are sold frozen.

1.2 The Sugar Industry

Value added generated by the sugar industry is attributed, for national accounting purposes, to the following industrial activity groups:

Agriculture: the final product is sugarcane. Both millers and planters are engaged in its production.

Manufacturing: the final product is sugar and its by-products, molasses, scums and electricity, which excludes Independent Power Producers (IPPs). Only millers are engaged in this activity.

Transport: includes only the millers' own account transport of sugarcane, sugar and other inputs

Distribution: includes activities of brokers, shippers and the Mauritius Sugar Syndicate:

(i) Methodology

The period from the growing stage up to the marketing of all sugar produced covers eighteen months. Production is valued on an accrual basis, so that output relating to crop year, say 2004/2005 is treated as production for calendar year 2004. The sugar cane crop of a given year normally extends from July to June of the following year.

Sugar is marketed solely through the Mauritius Sugar Syndicate. This agency provides data on value and price of sugar, both local sales and exports' proceeds. All the expenses incurred in respect of marketing are also given.

Production accounts are compiled using information from surveys and other data made available by the Mauritius Chamber of Agriculture.

The items of expenditure therein are scrutinised and then allocated to the intermediate expenses of the respective industries as mentioned above.

(ii) Production Account of Sugar Cane

Separate accounts are prepared in respect of millers and planters.

The gross proceeds from the sales of sugar and its by-products are obtained from the Mauritius Sugar Syndicate. The gross output of agriculture comprises 78% of the gross proceeds as the remaining 22% accrue to millers to cover the milling cost.

Intermediate expenses in respect of sugarcane cultivation owned by millers are compiled from annual surveys of selected establishments.

Manufacturing: The end product is sugar and only millers are engaged in its production. The gross output is worked out from the gross proceeds of sugar. The main item under goods consumed is sugarcane; other inputs include milling cost and marketing expenses which are obtained from the Mauritius Chamber of Agriculture and the Mauritius Sugar Syndicate.

Transport: The sugar estates and millers provide their own means of transport. Most of their canes, sugar and other inputs are transported by their own lorries. The 'Transport' activity is valued at cost. The expenditure incurred in respect of purchases of materials and services, compensation of employees and consumption of fixed capital are obtained from surveys. The total of these aggregates gives the gross output. Transport cost is then imputed, on a pro-rata basis, to the intermediate consumption expenditure of the agriculture and manufacturing sectors.

Distribution: The gross output is computed from the related expenditure items as given in the Mauritius Sugar Syndicate report. The cost component consists mainly of elements of value added.

PART III – STATISTICAL TABLES AND ANALYSIS

1. Overview of main agricultural statistics – 2009

1.1 Value added of agriculture

Value added at current basic prices of the agricultural sector was Rs 10,435 million in 2009, representing an increase of 0.8% compared to the 2008 figure of Rs 10,352 million. In real terms, it rose by 10.6%. This is explained by increases of 15.0% in “sugar cane” and 7.3% in “other agriculture” respectively. (Tables 1.1 & 1.5)

1.2 Share of agriculture in GDP

The share of agriculture to GDP declined from 4.4% in 2008 to 4.3% in 2009. (Table 1.1)

In 2009, the share of the sugar industry in GDP was 1.6%.

1.3 Employment in agriculture

Employment in agriculture stagnated at 46,200 in 2008 and 2009. Employment in large establishments decreased by 5.3 % from 18,700 in 2008 to 17,700 in 2009. On the other hand, employment other than large establishments increased by 3.6% to reach 28,500 in 2009. (Table 1.11)

It is to be noted that the “Voluntary Retirement Scheme (VRS 1)” in the Sugar Industry started in 2001 following the enactment of SIE Act No.21 of 2001. Following the agreement 2007, between Mauritius Sugar Producers Association (MSPA) and the Government, the “VRS 2” as per the SIE Act amended No.3 of March 2007 was initiated and around 6,285 workers in the agricultural sector voluntarily terminated their contract during the period July to December 2007. In year 2008, 343 additional workers voluntarily terminated their contract, while in 2009, there were none.

1.4 Sugar cane

Figures refer to the crop year, starting in July of the reference year up to June of the following year. Sugar cane fields are classified according to agro-climatic conditions in the following four regions: North, South, East and West.

The area under sugar cane in 2009 was 64,120 hectares, which was 2.4% lower than the 65,710 hectares in 2008. (Table 2.3)

An area of 60,380 hectares under sugar cane was harvested in 2009 as compared to 62,024 hectares in 2008, showing a reduction of 2.7%. (Table 2.4)

The cane yield per hectare for the whole island increased by 5.7% from 73.1 tonnes in 2008 to 77.3 tonnes in 2009. This was due to increases in cane yield in the North (17.7%), South (3.6%), East (2.8 %) and a decrease of (-1.6%) in the West. (Tables 2.4 and 2.5)

The production of cane increased by 3.0%, from 4,533,000 tonnes in 2008 to 4,667,235 tonnes in 2009. The average extraction rate in 2009 was 10.02% compared to 9.98% in 2008, representing a decrease of 0.4%. (Tables 2.5 and 2.9)

The production of sugar amounted to 467,234 tonnes, that is, 3.4% higher than the figure of 452,062 tonnes in 2008. Out of this volume 460,400 tonnes were exported for a total value of Rs 8,490 million, resulted in a short fall of 5.7% over the 2008 proceeds. (Tables 2.9 and 2.12)

Some 147,568 tonnes of molasses were produced in 2009 compared to 145,113 tonnes in the previous year; representing an increase of 1.7%. The production of scum increased by 2.0% from 167,934 tonnes in 2008 to 171,273 tonnes in 2009. (Table 2.9)

The average ex-syndicate price of sugar per tonne for 2009 was Rs 14,700 compared to Rs 17,427, representing a decrease of 15.6%. (Table 2.14)

1.5 Tea

The area under tea cultivation increased by 1.7% to reach 713 hectares in 2009 against 701 hectares in 2008. (Table 3.1)

Production of green tea leaves fell by 11.6% from 8,672 tonnes in 2008 to 7,663 tonnes in 2009. The production of black tea decreased by 11.2% from 1,668 tonnes in 2008 to 1,481 tonnes in 2009. (Tables 3.3 and 3.4)

The quantity of tea exported decreased by 5.5% from 41.6 tonnes in 2008 to 39.3 tonnes in 2009, while the earnings from the export of tea rose by 27.3% from Rs 8.8 million to Rs 11.2 million. (Tables 3.5 and 3.6)

1.6 Tobacco

An area of 234 hectares under tobacco cultivation was harvested in crop year 2009/10, which is 10.0% lower than the 260 hectares in 2008/09. (Table 3.7)

The quantum of tobacco leaves produced in 2009/10 was 314 tonnes as compared to 349 tonnes in 2008/09. Virginia (flue-cured) leaves, which represented 95.9% of total production, decreased by 9.6% and that of Amarello (air-cured) type by 18.8% to reach 13 tonnes. (Table 3.7)

1.7 Food crops

The area under food crops harvested in 2009 was 7,083 hectares compared to 6,266 hectares in 2008, representing an increase of 13.0%. (Table 4.1)

An increase of 22.5% was noted in the production of food crops in 2009. It increased from 93,021 tonnes in 2008 to 113,943 tonnes in 2009. During that period, the following changes were noted in the production of the main food crops: brinjal (+56.4%), cabbage (+24.4%), calabash (+27.8%), carrot (+58.9%), cauliflower (+39.0%), chouchou (+24.2%),

cucumber (+30.2%), ginger (-13.0%), groundnut (+83.4%), onion (-12.6%), potato (+33.4%), pumpkin (+20.4%), tomato (+9.3%) and pineapple (+38.9%). (Table 4.1)

1.8 Livestock

The number of livestock by type as at June 2009 was as follows: cattle (7,237), goat (26,014), sheep (2,023) and pigs (14,108). (Table 5.1)

The production of beef from live cattle increased by 9.8% from 1,903 tonnes in 2008 to 2,090 tonnes in 2009. Beef production from the slaughter of imported cattle increased by 9.5%, from 1,875 tonnes to 2,054 tonnes and local beef production (including live cattle from Rodrigues), which represented only 1.7% of total beef production, increased by 33.3% from 27 tonnes to 36 tonnes. (Table 5.3)

In 2009, the production of goat meat and mutton was 77 tonnes, 1.3% higher than the 2008 figure of 76 tonnes. The share of local production, inclusive of imports from Rodrigues, was 47.2%. (Table 5.3)

Production of pork increased by 29.7% from 330 tonnes in 2008 to 428 tonnes in 2009. (Table 5.3)

1.9 Fish

In 2009 total fish production was 6,978 tonnes, representing an increase of 23.3% over the previous year (5,660 tonnes). Fresh coastal fish catch was 2,167 tonnes in 2009 compared to 1,808 tonnes in 2008, representing an increase of 19.9% and other catch (tuna, bank, etc) also increase by 24.9%. (Table 5.4)

1.10 Producer Price Index-Agriculture (PPI-A), (Base period: year 2007 = 100)

The PPI-A measures the average change in the selling prices which producers receive for agricultural products. In order to reflect changes in the production pattern of agricultural products, a new set of weights has been calculated with 2007 as base period, the previous one being 2002. PPI-A indices are published at a more detailed level in this report. In 2009, the index stood at 102.7, representing a decrease of 3.2% over 2008. During the year, the producer prices of sugar cane receded by 10.9% and that of fresh vegetables by 0.4%. On the other hand, the following increases in price were registered: poultry (+8.7%), eggs (+5.3%), root crops (+5.0%), milk (+16.6%) and fruits (+7.5%). (Table 7.2). Comparative monthly indices for the agricultural sector are given in table 7.4.

SUMMARY TABLES

AGRICULTURAL SECTOR

Table 1.1 - Share of agriculture in the economy - Republic of Mauritius, 2007 - 2009

Notes:

1. Harvesting generally extends from June to December, while export and local sales are spread over the period 1st July to 30th June the following year.
2. Production may not tally with exports and local sales due to loss or surplus in storage.
3. Data do not include imported sugar destined for local market

Food Balance Sheets

General Notes

1. **Methodology:** Prior to 2004, the methodology for the preparation of the food balance sheets was based on the handbook of 1949. From 2004 onwards, recommendations of the “Handbook of Food Balance Sheets of FAO, 2001” have been used.
2. **Coverage:** As from 2006, data relate to the residents of the Republic of Mauritius (Islands of Mauritius and Rodrigues). Prior to 2006, data covered the Island of Mauritius only.
3. **Further disaggregates:** Some of the items have been further disaggregated owing to their high calorific values.
4. The column “Manufacture” previously appearing under the heading “Domestic Utilisation” has been renamed as “Food manufacture”. A new column “Other Uses” has been added. Included under this heading are: quantities mainly consumed by tourists and victuals. These items were previously included in “Exports”.
5. Quantity is in tonnes unless otherwise specified.
6. Estimated changes in stock:

A negative sign (-) against “stocks” denotes decrease in supply; the absence of a sign signifies increase in supply.
7. Data on production of food crops used for the computation of Food Balance Sheets include backyard production.
8. Production of meat includes local and imported of live animals slaughtered in Mauritius and Rodrigues. Off-abattoir slaughters are also included.
9. Data on fish and crustaceans are given in terms of wet-weight equivalent.

Table 6.1 - Per Capita consumption of selected commodities - Republic of Mauritius, 2002 - 2009

(Kg/year)

| Selected Commodities | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 ¹ | 2009 |
|---|-------|-------|-------|-------|-------|-------|-------------------|-------|

PRODUCER PRICE INDEX

PRODUCER PRICE INDEX - AGRICULTURE (PPI-A)

Methodology for the construction of the PPI-A

Weighting scheme

The weights are derived by multiplying the average of production during 2006, 2007 and 2008 by the average of unit prices in 2007, the reference period. The weight is assigned to each commodity group on the basis of total production (as a proxy for sales) pertaining to the particular group. At commodity level, the weights are apportioned within the commodity group on the basis of production of each product.

Quarterly and annual indices have been computed using a weighting system based on the production value for the base period.

Price collection

In principle, prices collected should refer to farm-gate prices, but it is extremely difficult to obtain such prices for vegetables, not only because of the enormous resources to be mobilised but also because of the unavailability of a list of planters. Hence, in lieu of the farm-gate price, the wholesale price of the produce is recorded at the two auction markets (Vacoas and Port-Louis) once a week.

In the case of commodities for which prices are fairly stable, data suppliers are visited on a quarterly basis, but prices are collected for each month of the quarter.

Prices of the main commercial crops like sugarcane, tea leaf and tobacco leaf, which are normally fixed for the crop year, are supplied by the respective marketing agencies.

Conversion factors

| <u>Vegetable</u> | <u>Average weight per unit(kg)</u> |
|------------------|------------------------------------|
| Beet | 0.3 |
| Cabbage | 1.09 |
| Cauliflower | 1.04 |
| Cucumber | 0.4 |
| Leek | 0.12 |
| Lettuce | 0.15 |
| Petsai | 1.2 |
| Squash | 0.3 |
| Sweet pepper | 0.046 |
| <u>Fruit</u> | <u>Average weight per unit(kg)</u> |

| | |
|------------------------|------------------------------------|
| Banana | 0.125 |
| Litchi | 0.025 |
| Mango | 0.15 |
| Mandarine | 0.1 |
| Pineapple | 0.5 |
| Watermelon | 1.5 |
| Coconut | 0.5 |
| <u>Poultry product</u> | <u>Average weight per unit(kg)</u> |
| Egg | 0.055 |

Index calculation

The PPI-A is calculated according to a modified Laspeyres formula:

$$I_t = \frac{\sum W_i(P_{ti}/P_{oi})}{\sum W_i} \times 100$$

where :

I_t is the index for the current period t

P_{ti} is the price of commodity i in the current period t

P_{oi} is the price of the commodity i in the reference period o (2007)

W_i is the weight associated with commodity i

Monthly Producer Price Index -Agriculture (PPI-A)

(Base period: Year 2007 =100)

Table 7.1 : Monthly indices by commodity group and product - Island of Mauritius, January 2008 - December 2009

AGRICULTURE UNIT

Glossary

Virgin crop: The first crop, from newly planted cane.

Ratoon crop: Cane crop grown from the stools of old cane, instead of from freshly planted cane seedlings.

Grande saison: A cane planting crop cycle with harvest in September to November, and replanting in March. The first crop is harvested after 16-17 months in the following year.

Petite saison: A cane planting crop cycle in which cane is harvested early (June – August) and the land is replanted immediately. The first crop is harvested after 12 months the following year.

Polarisation: Degree of polarisation of sugar, which indicates its purity

Interline: Growing of non-cane crops between cane furrows

Molasses: Final residue remaining after centrifuges and crystallization

Cess: A levy on sugar produced per crop year

Flue-cured: Tobacco leaves which are cured in barns using heat at a temperature of about 70⁰ C

Live weight: The weight taken immediately before slaughter

Carcass weight: Weight of the carcass after removal of the following parts (hide or skin, head, fore feet, hind feet, large blood vessels, offal and tail)

Wet weight: The actual ex-water weight of the catch at the time of capture for primary fish.

Per capita consumption (per caput): The per caput figure of each commodity is obtained by dividing the figure for food available for human consumption by the total population partaking of it during the reference period.
