DIGEST OF AGRICULTURAL STATISTICS - 1989

This is the sixth issue of a regular publication of the Central Statistical Office on Agricultural Statistics.

The digest is designed to bring together in a single report as many statistical series as possible on agricultural statistics. It thus contains information on the sugar, tea, tobacco, foodcrops, livestocks and fisheries sectors. It also includes a series of yearly "Food Balance Sheets" showing the pattern of food consumption of the population.

The data published normally cover the last 5 years (1985-1989), and are the latest available as at end of April 1990. Some of the figures are therefore provisional and subject to revision in later issues. Figures in successive issues of the digest supersede those appearing in previous ones.

It is hoped that the statistics which have been assembled in this digest will be useful to the public in general and to agricultural policy makers, planners and scientists in particular.

The preparation of this digest has required the co-operation of numerous organisations, both public and private. This co-operation is gratefully acknowledged here.

(D. Zmanay)

**ECONOMIC ACCOUNTS
OF
AGRICULTURE**

AGRICULTURAL PRODUCTION - YEAR 1989

Sugar Cane

The total area harvested in 1989 remained at previous year's level of around 77,000 hectares.

Production of sugar cane, however, decreased to 5,436,122 tonnes from 5,516,869 tonnes in 1988. For the second consecutive year, sugar cane production has been badly affected by adverse climatic conditions. The 1988 crop had suffered from drought conditions; the 1989 crop was severely affected by the strong winds of cyclones Firinga and Krissy, more particularly in the South and the East. The northern regions, on the other hand benefited from the rains accompanying the cyclones, resulting in a higher yield per hectare over the previous year. The average yield of sugar cane for the whole island nevertheless, dropped to around 70 tonnes per hectare which represents a shortfall of nearly 7%, when compared with the average yield in a normal year.

Sugar production was further affected by a low extraction rate, 10.45 compared to 11.50 the previous year. In fact, the shortfall in sugar production due to the lower extraction rate was more important than that due to the damage caused by the cyclones.

The production of sugar consequently dropped to 568,301 tonnes in 1989 representing a decrease of 10% over 1988, when it was 634,224 tonnes.

Tea

The gross area under tea cultivation was further reduced by 300 hectares, and covered 3,070 hectares in 1989. After reaching a peak of 45,291 tonnes in 1985, the production of green leaves has been steadily declining over the past four years, falling to 36,163 tonnes in 1988. In 1989, the decline was more pronounced and production fell to 29,239 tonnes. The low production of 1989 was partly due to the damage caused to tea plantations by cyclones Firinga and Krissy, but the major factor was the lack of interest of the small holders and their neglect of tea plantations following the low price obtained for green leaves as opposed to the rising costs of production, and acute shortage of labour for field operations.

The production of black tea consequently decreased by 20% from 6,854 tonnes in 1988 to 5,500 tonnes in 1989.

As a result of the relatively better price obtained on the world market and an appreciation of the pound sterling, the weighted average export price of black tea increased by 20% for the second consecutive year reaching Rs 19.37 per kg in 1989. It is recalled that, in 1984, tea was exported at the record price of Rs 36.86 a kg.

Tobacco

The area harvested under tobacco went up by 40 hectares to reach 800 hectares in 1989. The increase in the area harvested together with a better yield led to a 9% rise in production, that is, 1,040 tonnes compared to 967 tonnes in 1988.

Foodcrops

Some 5,200 hectares under foodcrops were harvested in 1989, almost the same area as in 1988.

In spite of the damage caused to foodcrops plantations by cyclones Firinga and Krissy, total production of foodcrops in 1989 increased by 11%, to reach 60,415 tonnes, against 54,400 tonnes in 1988. However in 1986, foodcrop production reached 65,700 metric tonnes.

Potato production increased by more than 40% from 12,770 tonnes in calander year 1988 to 18,210 tonnes in 1989, resulting from a better yield and an increase in the area harvested 862 hectares from 673 hectares the previous year. On a crop year basis (April-March), the 1989 crop is estimated at 19,800 tonnes compared to 15,000 tonnes for the previous year.

The production of maize continued to decline, falling from 3,800 tonnes in 1988 to 2,300 tonnes in 1989.

There was a significant increase in the production of ginger which rose to 380 tonnes from 220 tonnes the previous year. The high price of ginger that prevailed throughout 1988 led many planters to cultivate that crop, resulting in the higher production in 1989.

As a result of the damage caused to banana plantations by the two cyclones, the production of banana decreased by 40% from 7,920 tonnes to 4,640 tonnes in 1989, a fact reflected in the high price of banana throughout 1989.

Livestock and poultry

There was a rise in the production of cattle meat, poultry and milk, while that of goat and sheep meat had decreased over 1988, as indicated below:

	<u>Production (tonnes)</u>		<u>% Change</u>
	<u>1988</u>	<u>1989</u>	
Poultry	9,000	10,500	+ 17%
Cattle meat	1,561	1,641	+ 5%
Milk (000 litres)	12,500	13,500	+ 8%
Goat and sheep	180	132	- 27%

The increase in the production of cattle meat is attributable to the slaughter of imported live animals; production from local sources, in fact, decreased by 40%.

The production of poultry continued on its upward trend, reaching 10,500 tonnes in 1989.

A significant decrease of 27% was observed in the production of goat and sheep meat.

The production of pig meat remained unchanged at 660 tonnes.

Fisheries

Total fish production decreased by 7% dropping to 14,800 tonnes from 15,900 tonnes the previous year. The production of tuna fish for the canning industry rose by 11%, whilst production from the banks decreased by 31% and that of fresh fish remained almost constant at around 2,500 tonnes.

* Adjusted by Insurance Compensation for sugar lost in cyclones

- Notes : (1) Harvesting generally extends from June to December, while export and local sales are spread over the period 1st July to 30th June the following year.
- (2) Production may not tally with exports and local sales due to loss or surplus in storage.
- (3) For crop year 1989/90, estimated figures are given.
