DIGEST OF AGRICULTURAL STATISTICS - 1993

FOR E W O R D

This is the tenth issue of a regular publication of the Central Statistical Office on Agricultural Statistics for the island of Mauritius.

The digest is designed to bring together in a single report as many statistical series as possible on agricultural statistics. It thus contains information on the sugar, tea, tobacco, foodcrops, livestocks and fisheries sectors. It also includes a series of yearly "Food Balance Sheets" showing the pattern of food consumption of the population.

The data published normally cover the last five years (1989-1993) and are the latest available as at end of April 1994. Some of the figures are therefore provisional and subject to revision in later issues. Figures in successive issues of the digest supersede those appearing in previous ones.

It is hoped that the statistics which have been assembled in this digest will be useful to the public in general and to agricultural policy makers, planners and scientists in particular.

The preparation of this digest has required the cooperation of numerous organisations, both public and private. This co-operation is gratefully acknowledged here.

SUMMARY TABLES

AGRICULTURAL SECTOR

Agricultural Production - Year 1993

1. Introduction

This report presents data on agricultural production for the year 1993.

2. Sugar cane

The reduction in total acreage under sugar cane observed in previous years persisted in 1993 when a further decrease of 1,047 hectares was noted which brought total area harvested to 74,030 hectares.

Climatic conditions during the vegetative period were unfavourable with a severe water deficit recorded from November to January. Consequently, the yield of sugar cane per hectare was lowered to 73.0 tonnes in 1993 as against 77.0 tonnes in 1992. Production of sugar cane in 1993 was 5,402,401 tonnes which represented a 6.5% decrease as compared to 5,780,722 tonnes in the previous year.

The extraction rate also suffered from adverse weather conditions dropping from 11.12% in 1992 to 10.46% in 1993. This rate is the lowest since 1990. As a result, the production of sugar in 1993 was 565,026 tonnes, that is 12.1% less than the 1992 figure of 643,165 tonnes.

3. Tea

The area under tea cultivation which stood at 3,151 hectares in 1993 was roughly the same as in the previous year (3,133 hectares). However, the production of green leaves attained 30,900 tonnes (a yield of 9.8 tonnes per hectare) in 1993 as compared to 30,379 tonnes in 1992 (a yield of 9.7 tonnes per hectare). The rise in production is attributable to favourable climatic conditions and increased use of mechanical plucking.

Consequently, the production of black tea reached 5,931 tonnes in 1993, indicating a surplus of 86 tonnes or 1.5% above the previous year's production. It is noteworthy that the average export price of black tea in 1993 registered a substantial increase of 33.9% to attain Rs 23.35 per kg as against Rs 17.44 per kg a year earlier.

4. Tobacco

In 1993, the area harvested under tobacco was 756 hectares or 5.9% less than 1992. However, production of tobacco leaves grew by 52 tonnes (5.4%) from 1992 to 1993 (963 tonnes as compared to 1,015 tonnes). This increase is due to an improvement in the yield (+11.7% over 1992) per hectare mainly as a result of better cultural practices.

5. Foodcrops

In 1993, production of foodcrops amounted to 79,174 tonnes, representing an increase of 9.7% as compared to the 1992 production of 72,070 tonnes. As regards total acreage, 5,984 hectares under foodcrops were harvested in 1993, almost similar to last year (5,856 hectares). It is worthwhile to note that increases in area harvested under some foodcrops were offset by decreases under other foodcrops. Favourable weather conditions (major part of 1993) together with the pest/disease status which was stable in 1993 resulted in an overall rise in yield per hectare.

Due to an expansion in area harvested and a better yield in 1993, significant increases were observed in the production of the following foodcrops: chillies (+37.4%), tomato (+27.4%), cabbage (+65.6%), cauliflower (+20.4%), brinjal (+50.0%), onion (+12.3%), beans and peas (+15.1%), creepers (+14.9%), other vegetables (+28.1%), banana (+15.8%) and pineapple (+76.0%).

On the other hand, potato production dropped from 19,175 tonnes in 1992 to 13,780 tonnes in 1993. This lower production is explained partly by late plantation in the second season of 1993 resulting in 4,350 tonnes being harvested in January 1994. However, part of the decline is also due to a decrease in area harvested.

The production of maize continued to fall, decreasing from 1,995 tonnes in 1992 to 1,750 tonnes in 1993.

As regards groundnut, a sharp drop in area planted, due largely to limited seed availability, resulted in a decrease of 27.3% to 865 tonnes in 1993.

A poor harvest was noted in ginger production which contracted from 340 tonnes to 285 tonnes (-16.2%) in 1993 due to poor control of soft rot disease.

The production of pineapple recorded a sharp increase of 76.1% to 4,050 tonnes in 1993 as against 2,300 tonnes in 1992. This higher increase is the result of improved cultural practices.

6. Livestock and Poultry

Beef production climbed by 147 tonnes (6.2%) to 2,523 tonnes in 1993 from 2,376 tonnes a year ago. However, this increase is due to a rise of 247 tonnes (from 1,848 to 2,095 tonnes) in the slaughter of imported live cattle which more than offset a decrease of 100 tonnes (from 528 to 428 tonnes) in production from local (including Rodrigues) sources. Imports which accounted for 77.8% of total production in 1992 rose to 83.0% in 1993.

Production of goat meat and mutton was down by 4.2% from 144 tonnes in 1992 to 138 tonnes in 1993.

Pork production was higher by 6.0% in 1993 when it was 1,054 tonnes as compared to 994 tonnes the previous year.

Poultry production continued on its upward trend, reaching 17,000 tonnes in 1993; 1,500 tonnes more than the preceding year's production and 3,750 tonnes more than that of 1991.

Production of milk reduced to 9 mn litres in 1993 from 10.5 mn litres in 1992.

7. Fisheries

Total fish production in 1993 inched down to 16,433 tonnes, slightly lower than the previous year's level of 16,488 tonnes. As compared to 1992, production of fresh fish (coastal) and tuna fish fell to 2,533 tonnes (-7%) and 7,088 tonnes (-11.3%) respectively. Owing to an increase in the number of fishing vessels, production of frozen fish from banks increased to 6,720 tonnes in 1993 against 5,684 tonnes a year ago.

- Notes:
- (1) Harvesting generally extends from June to December, while export and local sales are spread over the period 1st July to 30th June the following year.
 - (2) Production may not tally with exports and local sales due to loss or surplus in storage.
 - (3) For crop year 1993/94, estimated figures are given.

FOOD

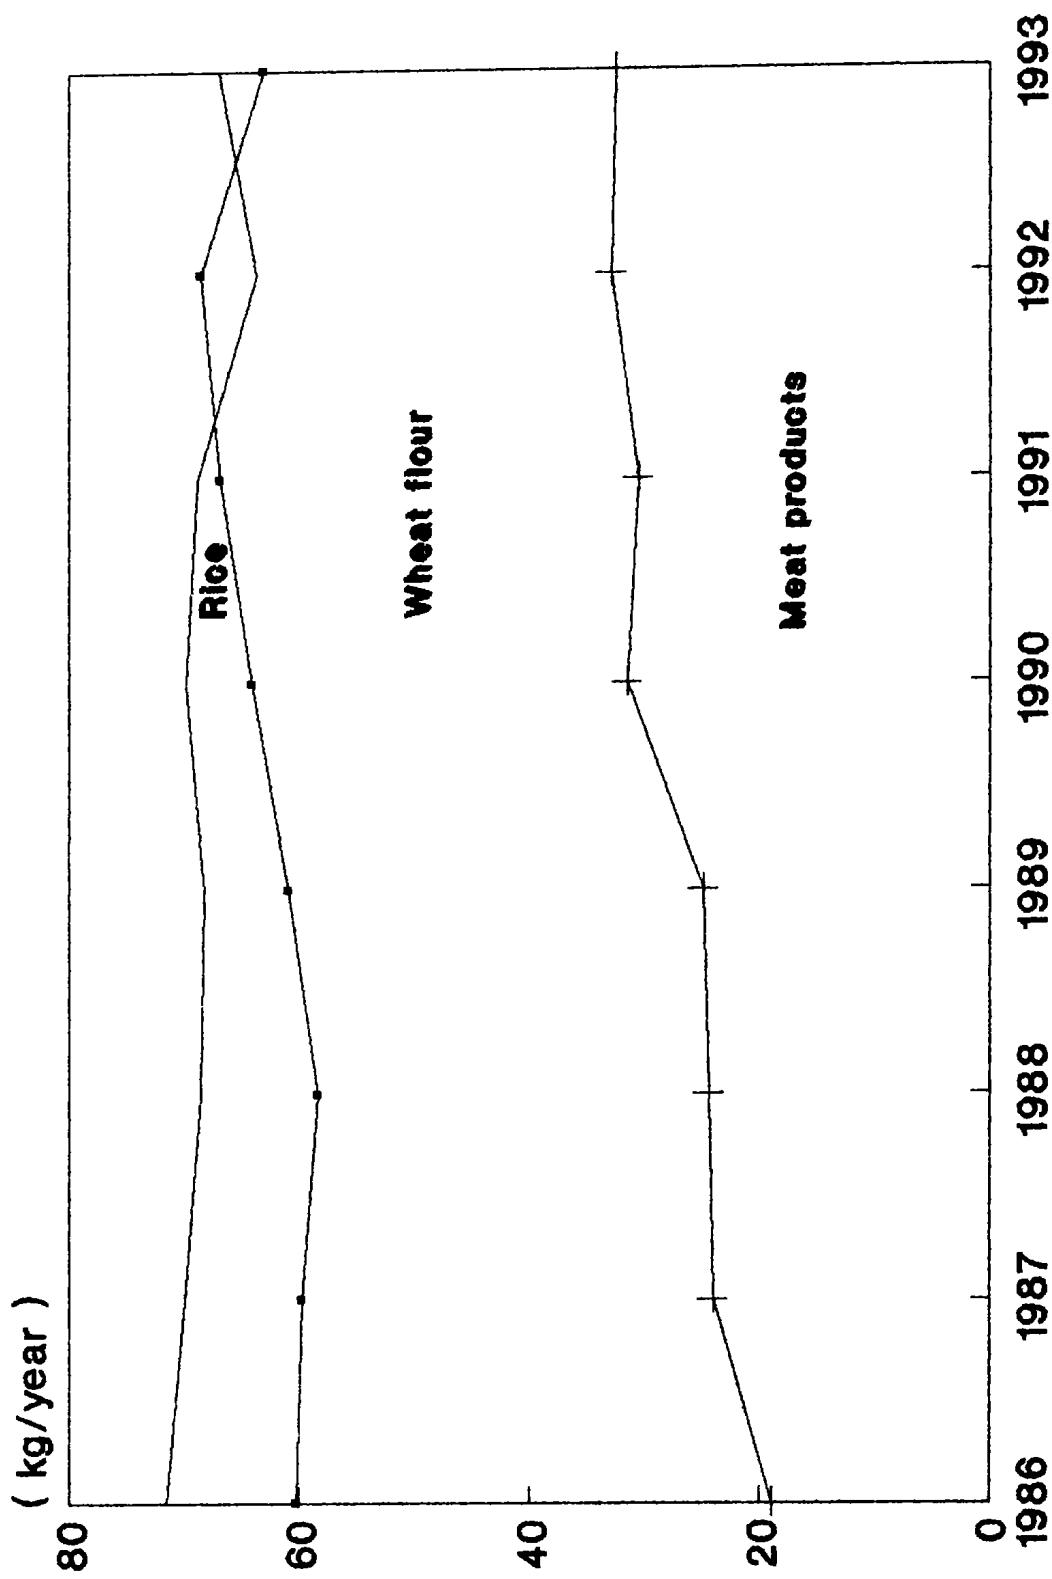

BALANCE SHEET

Food Balance Sheet

General Notes

1. All data relate to the Island of Mauritius only (not its dependencies).
2. Quantity is in tonnes unless otherwise specified.
3. (a) Gross imports include imports from dependencies.
(b) Gross exports include exports to dependencies.
4. Estimated changes in stock:
A plus sign indicates that there has been a decrease in stock, that is, an increase in supply. A negative sign would mean the converse.
5. Data on production of foodcrops may not tally with production data published in other sections since allowance has been made here for backyard production.
6. Local production of meat includes imported live animals slaughtered in Mauritius. Estimates for off-abattoir slaughter~~s~~ have been included.
7. Data on fish and crustaceans are given in terms of wet-weight equivalent.
8. As from 1989 onward, population includes Mauritian residents and Mauritians residing abroad.
