## FOREWORD

This is the first issue of a new publication on demographic statistics which the Central Statistical Office proposes to issue every year.

The Digest contains not only more detailed demographic data than have been previously published but also covers several topics which are being presented for the first time. Thus, apart from population, live births, still births, deaths and marriages, separate sections have been included on divorce statistics, estimates of the Mauritian population, and projections of the Mauritian population. Furthermore a set of life tables are given for both the Islands of Mauritius and Rodrigues.

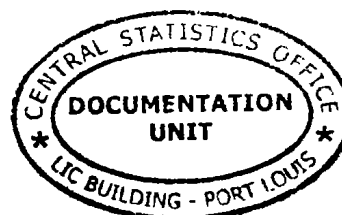

It is hoped that the data assembled in this report will be of help to the public in general and to planners and policy makers in particular.

Most of the data required for the preparation of this report were obtained from the Civil Status Division, except for divorce statistics which were supplied by the Judicial Department. The assistance and co-operation of these departments are gratefully acknowledged.

INTRODUCTORY NOTESSection 1 - Total population

In this report, two different population concepts have been used, namely that of 'total' population and that of 'Mauritian' population. The figures of total population include Mauritians and non-Mauritians and are presented in Section 1 while the figures of the Mauritian population are presented in Section 3.

Although the difference between the total and Mauritian population at the census was only about 5 000, the need for publishing data separately for the Mauritian population was seen when an evaluation of the 1983 Census data was carried out.

It was found that when the sex of passengers was not clearly stated on the embarkation or disembarkation card, it was difficult to deduce this information from the name in the case of many non-Mauritians. This affected the reliability of the sex distribution of the estimated population. Since the main interest lies in the Mauritian population, which did not seem to be affected by the above problem, it was found desirable to present a separate series of estimates for the Mauritian population only. However, all demographic rates will continue to be based on the total population.

It must be noted that in Mauritius population estimates for any year are obtained by using the most recent census as base, adding the excess of births over deaths and allowing for international arrivals and departures.

Section 2 - Vital Statistics

The statistics of births, deaths and marriages have been compiled from raw data supplied by the Civil Status Division, Prime Minister's Office while statistics of divorce have been obtained from the office of the Master and Registrar, Supreme Court.

The Vital Registration Forms for the recording of live births, still births, deaths and marriages occurring in Mauritius are shown at the end of this report.

Section 3 - Live births

Formerly, the birth statistics published in the Annual Digest of Statistics for any year related only to births which were registered in that year. However, not all births occurring in a year are registered within that year because a delay of 45 days is allowed for registration. In this report, an additional series of tabulations which present birth statistics according to year of occurrence, have been included.

All fertility and reproduction rates, whether in previous reports or the present one, are based on births occurred during the year. The only exception is the crude birth rate which is based on total births registered during the year. The reason is to avoid long delays in obtaining tabulations by year of occurrence.

#### Section 4 - Still births

The tables included in this report are more detailed than those previously appearing in the Annual Digest of Statistics.

Data on still births are compiled according to date of registration. In any case, there is not much difference between date of occurrence and date of registration because still births, like deaths, are normally registered within 24 hours of occurrence.

#### Section 5 - Deaths

The death statistics for any year are based on events registered during that year. The main points to be noted in this section are the inclusion, for the first time, of two sets of life tables for 1972 and 1983 respectively, and of two tables showing deaths due to selected causes, one for the whole population and the other one for children aged under one year.

#### Section 6 - Marriages

Prior to 1982, the statistics of marriages for any year referred to civil marriages which were celebrated during that year. These include religious marriages (not recognized by law) which could have been celebrated in the past, but which were registered for the first time during that year.

With the introduction of the Civil Status Act 1981 which came into operation on 1st January 1982, there has been a slight disruption in the series of marriage statistics. Since the commencement of the new Act, the figures for marriages for any year include:-

- (a) Civil marriages;
- (b) Religious marriages having effect as civil marriages;
- (c) Muslim religious marriages; and
- (d) 'Past Religious Marriages' celebrated before 1982 (either in Mauritius or abroad) but registered during the year.

#### Section 7 - Divorce

This is the first time that statistics of Divorce are published by this office. The number of divorces for any year relate to provisional decrees of divorce which are granted when the Court is satisfied that the petitioner has established his case. Three months after a provisional decree is made, any of the two parties may apply to the Court for the provisional decree to be made permanent.

#### Section 8 - Mauritian population

Please refer to the notes of Section 1 in order to differentiate between the concepts of 'total' population and that of 'Mauritian' population.

Section 9 - Projection of the Mauritian population

Three series of population projections, each one covering a different set of assumptions, are presented in this section. Of the three series, it is thought that the projections given under Variant I are the most likely to hold so that the demographic implications of this Variant only have been presented (Tables 9.4 and 9.5). Variant II is the same as Variant I except that no allowance is made for migration whereas Variant III can be considered as being on the high side since it assumes fertility to remain constant at the 1985 level.

Section 10 - Rodrigues

The population figures presented in this section relate to the total population of the island. Thus, unlike the data for the island of Mauritius, only one population concept enters into the tables.

For the island of Rodrigues, it is not possible to have estimates of 'total' and 'Mauritian' population separately because of the non-availability of data. The existing data collection system does not permit a distinction between Mauritians and non-Mauritians among the passengers entering and leaving the island of Rodrigues.

In any case, the difference between population figures using either the concept of 'total' or 'Mauritian' would not be large. For instance, the latest Census conducted in the island of Rodrigues on 2nd July 1983 returned a total population of 33 082, out of whom there were only 23 non-Mauritians.

- 1/ Note: (i) Estimates are based on the 1983 census total population, adjusted for underenumeration of young children.  
(ii) No account has been taken of internal migration in computing these estimates  
(iii) Estimates of population at the district level and for Municipal Council Areas have been updated by allowing for births, deaths and net external migration. However, in the case of localities and Village Council Areas, the estimates have been obtained by assuming a rate of increase of population of the same order as for the geographical district of which they form part.

2/ Excluding that part of Palma VCA which is in Black River district but within the boundaries of the Municipality of Quatre Bornes.

<sup>1/</sup> figures refer to total population (i.e. Mauritian and non-Mauritian). Data for 1963-71 have been revised in the light of the 1972 population census results; data for 1973-85 have been revised in the light of the 1983 population census results adjusted for underenumeration of young children.

Note: The increase in the number of civil marriages as from 1982 is due largely to improved registration of religious marriages with the coming into force of a new Civil Status Act as from January 1982.

The estimates by single year of age have been obtained by appropriate splitting of the projected population by five year age groups. Although the figures are given to the last digit, it is recommended that, because of the limitations on their reliability, they be rounded to the nearest hundred before use.

SECTION 10 - RODRIGUES

The population figures presented here relate to the 'total' population of the island of Rodrigues. No separate tabulations are presented for the Mauritian population, as in the case of the Island of Mauritius. This does not seem necessary especially since only 23 non-Mauritians were enumerated in Rodrigues at the 1983 Census.

## GLOSSARY

### Population

De facto population : a population enumerated on the basis of those present at a particular time, including temporary visitors and excluding residents temporarily absent.

De jure population : a population enumerated on the basis of normal residence excluding temporary visitors and including residents temporarily absent.

Natural Increase : the excess of births over deaths.

Rate of Natural Increase : the difference between the births and deaths occurring during a year per 1,000 mid-year population. This rate is the difference between the "crude birth rate" and the "crude death rate".

### Age structure

Dependency ratio : the ratio of the combined child population (under 15 years) and aged population (65 years and over) to the population of intermediate age (15 - 64 years).

Median age : the age which divides the population into two equal-size groups, one of which is younger and the other of which is older than the median.

### Fertility

Crude birth rate : the number of live births in a year per 1,000 mid-year population.

Age specific fertility rate : the number of live births to women of a specified age-group per 1,000 women in that age-group.

General fertility rate : the number of live births occurring in a year per 1,000 women aged 15 - 49 years at mid-year.

Total fertility rate : the average number of children born to an average woman assuming that she survives to the end of her child-bearing age and is subjected to a fixed schedule of age-specific fertility rates.

Gross reproduction rate : the average number of daughters born to an average woman assuming that she survives to the end of her child-bearing age and is subjected to a fixed schedule of age-specific fertility rates.

Net reproduction rate : the extent to which an average woman will replace herself, assuming a fixed schedule of age-specific mortality and fertility rates to prevail through her reproductive span of life.

Live birth order : the ordinal number of a given live birth in relation to all previous live births of the same woman.

## Mortality

Crude death rate : the number of deaths in a year per 1,000 mid-year population.

Age specific death rate : the number of deaths of a specified age-group occurring in a year per 1,000 mid-year population in that age-group.

Infant death : death of an infant aged under one year.

Infant mortality rate: the number of infant deaths in a year per 1,000 live-births during the year.

Still birth : a child born after the twenty-eighth week of pregnancy and not breathing or showing any signs of life at any time after being completely expelled from the mother.

Still birth rate : the number of still births in a year per 1,000 total births (live births and still births) during the year.

Early neonatal mortality rate : the number of deaths of infants under 7 days of age in a year per 1,000 live births during the year.

Late neonatal mortality rate : the number of deaths of infants aged between 7 and 28 days in a year per 1,000 live births during the year.

Neonatal mortality rate : the number of deaths of infants aged less than 28 days in a year per 1,000 live births during the year.

Post neonatal mortality rate : the number of deaths in a year of infants aged between 28 days and under one year, per 1,000 live births during the year.

Expectation of life at birth ( $e_0$ ) : the average number of years that a new born child would be expected to live if subjected to the mortality conditions expressed by a particular set of age-specific death rates.

## Marriage

Marriage rate : the number of persons married in a year per 1,000 mid-year population.

## International Migration

Net migration : because of the absence of reliable data on immigrants and emigrants, the net migration is taken as the difference between total international arrivals and departures.

Net migration rate : the net migration in a year per 1,000 mid-year population.
