DIGEST OF ENERGY AND WATER STATISTICS - 2009

FOREWORD

This is the twelfth issue of a regular publication of the Central Statistics Office on energy and water statistics. It presents latest statistics on energy for the years 2000 to 2009, and on water for the period 2005 to 2009. All data refer to the Republic of Mauritius, unless otherwise specified and may be subject to revision in subsequent issues of the digest.

It is hoped that the statistics contained in this publication will prove useful to a wide range of users including planners, policy makers and research workers.

This digest has been prepared with the collaboration of the Central Electricity Board, the Central Water Authority and several other public and private organisations. The co-operation and assistance of all these organisations are gratefully acknowledged.

This publication, together with other publications of the Central Statistics Office, is available on the website <http://statsmauritius.gov.mu>.

Energy & Water Statistics, 2009: An overview	15

SECTION 1 - Energy commodity balance and main indicators

Table 1.1 - Energy balance 2009 (ton of oil equivalent)	22
Table 1.2 - Energy balance 2009 (terajoules)	23
Table 1.3 - Energy balance 2008 (ton of oil equivalent)	24
Table 1.4 - Energy balance 2008 (terajoules)	25
Table 1.5 - Main energy indicators, 2000-2009	26

SECTION 2 - Primary energy requirement

Table 2.1 - Primary energy requirement, 2000-2009	30
Table 2.2 - Imports of energy sources (Physical unit), 2000-2009	32
Table 2.3 - Imports of energy sources (Energy unit), 2000-2009	32
Table 2.4 - Imports of energy sources by country of origin (Physical unit), 2000-2009	33
Table 2.5 - Imports value of energy sources by country of origin, 2000-2009	34
Table 2.6 - Re-exports of energy sources to foreign aircraft and bunkers, 2000-2009	35
Table 2.7 - Average import price of energy sources by country of origin, 2000-2009	36
Table 2.8 - Average retail price of petroleum products used as energy sources, 2000-2009	38

SECTION 3 - Transformation of energy

Table 3.1 - Plant capacity, peak demand, electricity generation, sales and total consumption of electricity, 2000-2009	40
Table 3.2 - Plant capacity, 2009	41
Table 3.3 - Electricity production by source of energy, 2000-2009	42

SECTION 3 - Transformation of energy (Contd.)

Table 3.4	- Percentage share of electricity production by source of energy, 2000-2009	42
Table 3.5	- Generation of electricity by CEB and IPP, 2000-2009	43
Table 3.6	- Percentage share of electricity generated by CEB and IPP, 2000-2009	44
Table 3.7	- Fuel input for electricity production, 2000-2009	45

SECTION 4 - Final energy consumption

Table 4.1	- Final energy consumption by sector (Energy unit), 2000-2009	48
Table 4.2	- Percentage share of final energy consumption by sector, 2000-2009	48
Table 4.3	- Final energy consumption by sector and type of fuel (Physical unit), 2000-2009	49
Table 4.4	- Final energy consumption by sector and type of fuel (Energy unit), 2000-2009	50
Table 4.5	- Percentage share of final energy consumption (ktoe) by sector and type of fuel, 2000-2009	51
Table 4.6	- Final energy consumption by energy source, 2000-2009	52
Table 4.7	- Sales of electricity by type of tariff, 2000-2009 (Republic of Mauritius)	54
Table 4.8	- Sales of electricity by type of tariff, 2000-2009 (Island of Mauritius)	56
Table 4.9	- Sales of electricity by type of tariff, 2000-2009 (Island of Rodrigues)	58

SECTION 5 - Water statistics

Table 5.1	- Water balance for Island of Mauritius, 2005-2009	62
Table 5.2	- Main water indicators, 2005-2009 (Island of Mauritius)	62
Table 5.3	- Water utilisation by source of water (Mm^3), 2005-2009 (Island of Mauritius)	63
Table 5.4	- Fresh water abstractions (Mm^3) for agricultural, domestic and industrial use by source, 2005-2009 (Island of Mauritius)	63

SECTION 5 - Water statistics (Contd.)

Table 5.5	- Gross storage capacity by location and use of reservoirs (Island of Mauritius)	63
Table 5.6	- Mean rainfall, 2005-2009 (Island of Mauritius)	64
Table 5.7	- Mean rainfall, 2005-2009 (Island of Rodrigues)	66
Table 5.8	- Percentage of water level by month and reservoir, 2005-2009 (Island of Mauritius)	69
Table 5.9	- Average monthly potable water production (Mm ³) from treatment plants and boreholes to distribution systems, 2005-2009 (Island of Mauritius)	72
Table 5.10	- Water sales by type of tariff of subscriber, 2005-2009 (Island of Mauritius)	75

SECTION 6 - Energy & Water data from Census and Surveys

Table 6.1	- Housing units occupied by private households by geographical location of residence and availability of electricity - 1990 & 2000	78
Table 6.2	- Private households by geographical location of residence and principal fuel used for cooking - 1990 & 2000	79
Table 6.3	- Private households by geographical location of residence and principal fuel used for heating bath-water, 2000	80
Table 6.4	- Private households by geographical location of residence and type of water supply - 1990 & 2000	81
Table 6.5	- Private households by geographical location of residence and availability of water tank and connection to sewerage system - 2000	82
Table 6.6	- Distribution of average monthly household consumption expenditure by <i>Income Class</i> for selected energy and water related items as at Household Budget Survey 2001/2002 and 2006/2007	84
Table 6.7	- Distribution of average monthly household consumption expenditure by <i>Expenditure Class</i> for selected energy and water related items as at Household Budget Survey 2001/2002 and 2006/2007	85
Table 6.8	- Average monthly household consumption expenditure for Transport and Housing division of COICOP by quintile group of household income at Household Budget Survey 2001/2002 and 2006/2007	86

SECTION 6 - Energy & Water data from Census and Surveys (Contd.)

Table 6.9	- Household expenditure for selected energy and water related items by district, Continuous Multi-Purpose Household Survey 2001-2009	87
Table 6.10	- Percentage of households by principal and secondary fuels used for cooking - Continuous Multi-Purpose Household Survey 2004	89
Table 6.11	- Percentage of households by main source of energy used for heating water for bathing purposes- Continuous Multi-Purpose Household Survey 2004	89
Table 6.12	- Percentage of households by measures taken to reduce electrical energy consumption- Continuous Multi-Purpose Household Survey 2004	89

LIST OF FIGURES

Mm ³	Million cubic metres
mn	Million
MW	Megawatt (1,000 kW)
Rod.	Island of Rodrigues
TJ	Terajoules
toe	Tonne of oil equivalent

Glossary

Energy sector

Bagasse	A cellulosic residue left after sugar is extracted from sugar cane. It is mostly used as fuel within the sugar milling factories.
Bunkers	Refer to the amount of fuels delivered to ocean-going ships or aircraft of all flags engaged in international traffic. Deliveries to ships engaged in transport in inland and coastal waters, or to aircraft engaged in domestic flights, are not included.
Calorific values	The energy content of a fuel is equivalent to the heat released on complete combustion of the fuel.
Capacity	<p>The maximum power available from a power station at a point in time:</p> <ul style="list-style-type: none"> - <i>Installed capacity</i>: The nameplate capacity of the generator set. - <i>Plant capacity</i>: The net capacity measured at the terminals of the stations, i.e., after deduction of the power absorbed by the auxiliary installations and the losses in the station transformers. - <i>Effective capacity</i>: It is the plant capacity less any amount of derated capacity from the install capacity.
Charcoal	Comprises the solid residue obtained by the destructive distillation of wood in the absence of air.
Coal	Fossil fuel that has a high degree of coalification, with a gross calorific value over 24MJ/kg (5700 Kcal/kg) on an ash-free but moist basis.
Conversion factors	Factors used to convert quantities from original physical units into a common accounting unit for the purpose of aggregating diverse energy sources. The ‘tonne of oil equivalent’ (toe) has been adopted as the accounting unit.
Diesel Oil	Consists primarily of medium oil distilling between 180°C and 380°C.
Energy	Means the capacity for doing work or for producing heat. Producing heat is a common manifestation of ‘doing work’ as are producing light and motive force.
Energy Balance	Shows in a consistent accounting framework, the production, transformation and final consumption of all forms of energy for a given geographical area and a given period of time, with quantities expressed in terms of a single accounting unit for purposes of comparison and aggregation. The energy balance thus presents an overview of the energy produced and consumed in a system, matching input and output for a specific time period, usually a year
Energy intensity	Provides a measure of the efficiency with which energy is being used in production.
Energy unit	Express fuel and energy in energy content. The International System of Units (SI unit) of energy is the Joule. Historically the ‘tonne of coal equivalent’ was used, but with ascendance of oil, this has been largely replaced by the ‘tonne of oil equivalent’ (toe), defined as 41.868 gigajoules.
Final Energy Consumption	<p>Energy consumption by final user- i.e. energy which is not being used for transformation into other forms of energy. The consumption by sector is presented as follows:</p> <p><i>Agriculture</i>: Energy used for irrigation and by other agricultural equipments;</p> <p><i>Commercial & distributive trade</i>: Energy consumed by the business and commercial sector;</p>

Residential: Consumption of energy by residential sector;

Manufacturing: Consumption in industry and construction; and

Transport: Includes consumption by land vehicles, ships and local aircrafts.

Fossils fuels	Formed from the fossilized remains of dead plants and animals by exposure to heat and pressure in the Earth's crust over hundreds of millions of years.
Fuels	The term fuel is used to describe those energy sources, whether primary or secondary, that must be subjected to combustion or fission in order to release the energy stored up inside them.
Fuel wood	The term 'fuel wood' embraces all forms of woody material.
Fuel Oils	The heavy oils from the refining process and used as fuel in power stations. It is also commonly used by ships and industrial large-scale heating boilers installations as a fuel in furnaces or boilers.
Gasolene	Comprises a mixture of relatively volatile hydrocarbons with or without small quantities of additives, which have been blended to form a fuel suitable for use in spark-ignition internal combustion engines.
Gross Domestic Product (GDP)	It represents the aggregate money value of all goods and services produced within a country out of economic activity during a specified period, usually a year, before provision for the consumption of fixed capital.
Gigawatt hour (GWh)	Unit of electrical energy, equal to 3.6 terajoules (TJ).
Hydro	Energy derived from the potential and kinetic energy content of water.
Imports	Refer to amount of fuels obtained from other countries.
Indigenous production	Comprises hydro electricity, fuel wood, bagasse and electricity from wind generation.
IPP (Independent Power Producers)	Undertakings which, in addition to their main activities, themselves produce (individually or in combination) electric energy intended, in whole or in part, to meet their own needs and for sale to the CEB.
Jet fuel Kerosene-type	Refers to medium oils meeting the required properties for use in jet engines and aircraft-turbine engines.
Kerosene (exlc. Jet fuel type)	A medium oil distilling between 150°C and 300°C and which is used in sectors other than aircraft transport.
Kilowatt hour (kWh)	It is a precise measure of heat and work. 1kWh=3.6 x 10 ⁶ joules
Liquefied petroleum Gas (LPG)	Consists mainly of propane or butane, derived from oil. It is normally liquefied under pressure for transportation and storage. It is often used to power cooking stoves or heaters and to fuel some types of vehicle.
Losses (transmission / distribution losses)	Comprise losses in transmission and distribution of electric energy and losses in transformers, which are <i>not</i> considered as integral parts of the power stations.

Megawatt (MW)	A unit of electrical power, equal to 10^6 watts, i.e 1000kW
Own use (Station use and loss)	Included are consumption by station auxiliaries and losses in transformers, which are considered as integral parts of the power stations.
Peak demand	Peak demand, peak load or on peak are terms used in energy demand management describing a period in which electrical power is expected to be provided for a sustained period at a significantly higher than the average supply level. Peak demand fluctuations may occur on daily, monthly seasonal and yearly cycles.
Petroleum products	The primary source of petroleum products is crude oil. Petroleum or crude oil is a naturally occurring, flammable liquid found in rock formations in the Earth. Diesel oil, fuel oils, Gasoline, Kerosene and Liquefied petroleum gas(LPG) are among the major products of oil refineries.
Primary energy	Primary energy designates energy from sources that involve only extraction or capture, with or without separation from contiguous material, cleaning or grading, before the energy embodied in that source can be converted into heat or mechanical work. Primary energy is not derived from any other forms of energy. By convention, sources of energy that occur naturally such as coal, natural gas, fuelwood are termed primary energy.
Primary energy requirement	It is the sum of imported fuels and locally available fuels less re-exports to bunkers after adjusting for stock changes.
Production	Comprises gross production, i.e., the amount of electric energy produced, including that consumed by station auxiliaries and any losses in transformers that are considered integral parts of the power station.
Quintile	A statistical value of a data set that represents 20% of a given population. The first quintile represents the lowest fifth of the data (1-20%); the second quintile represents the second fifth (21% - 40%) etc.
Renewables or Renewable sources of energy	Renewables are natural resources that, after exploitation, can return to their previous stock levels by natural processes of growth or replenishment. Conditionally renewable resources are those whose exploitation eventually reaches a level beyond which regeneration will become impossible. Such is the case with the clear-cutting of tropical forests.
Secondary energy	Secondary energy designates energy from all sources of energy that results from transformation of primary sources. e.g charcoal from fuelwood.
Statistical differences	This is the difference between calculated and observed inland consumption.
Solar	Energy derived from solar radiation directly by photovoltaic effect, or indirectly by thermal transformation.
Stock change / Statistical error	This is the difference between calculated and observed inland consumption.
Terajoule	The terajoule (TJ) is equal to one trillion joules(10^{12} J). (A joule is a genetic unit of energy in the International System of units. The work required to continuously produce one <u>watt</u> of <u>power</u> for one <u>second</u>).

Thermal plants	Comprises of conventional thermal plants of all types, whether or not equipped for the combined generation of heat and electric energy. They include steam-operated generating plants and plants using internal combustion engines or gas turbines.
Thermal sources of electricity	These include coal, oil and bagasse.
Transformation	Those fuels used directly in producing other fuels.
Watt (W)	The conventional unit to measure a rate of flow of energy. One watt amounts to 1 Joule per second.
Wind energy	Energy derived from the action of the wind.

Water Sector

Evapotranspiration	Combined loss of water by evaporation from the soil or surface.
Groundwater recharge	Process by which water is added from outside to fresh water found beneath the earth surface.
Surface runoff	The flow of surface water, from rainfall, which flows directly to streams, rivers, lakes and the sea.
Water Balance	The water balance is based on long term records of annual average rainfall and indicates how freshwater resources are distributed.
1mm rainfall	1 litre of rainwater per square metre of surface area.

* * * * *

Energy conversion factors

The following energy conversion factors have been used to express the energy content of the different fuels in terms of a common accounting unit, namely the ‘tonne of oil equivalent’ (toe*).

Energy source	Tonne	toe
Bagasse	1	0.16
Charcoal	1	0.74
Coal	1	0.62
Diesel Oil	1	1.01
Dual Purpose Kerosene (DPK)	1	1.04
Fuel oil	1	0.96
Fuelwood	1	0.38
Gasolene	1	1.08
Liquefied Petroleum Gas (LPG)	1	1.08
	GWh	toe
Electricity	1	86
Hydro/Wind	1	86

* 1 toe = 41.868 gigajoule (net calorific value)

ENERGY AND WATER STATISTICS, 2009 – An overview

Introduction

This issue of the ‘Digest of Energy and Water Statistics, 2009’ covers the period 2000 to 2009 for energy statistics, and the years 2005 to 2009 for water statistics. The figures have been compiled in close collaboration with the Central Electricity Board (CEB), the Central Water Authority (CWA), the Water Resources Unit (WRU), the Meteorological Services, petroleum companies and Independent Power Producers (IPPs). All data refer to the Republic of Mauritius, unless otherwise specified. Some of the figures, given in the text below, have been rounded off for easy interpretation.

Data pertaining to energy and water from Household Budget Surveys (HBS) and Continuous Multipurpose Household Surveys (CMPHS) have been introduced in this issue, together with the Housing and population Census tables which were already presented.

The energy data have been compiled according to the recommendation of the United Nation Manual, Series F No. 29 on Energy Statistics.

2. Energy

2.1 The energy balance

The energy balance (Tables 1.1 – 1.4) shows the supply and final uses of electricity and the different types of fuel in the national economy. Total primary energy requirement is obtained as the sum of indigenous production (hydro, fuelwood and bagasse) and imports less re-exports and bunkering, after stock adjustments. Final energy consumption is the total amount of energy required by end users as a final product. End-users are categorized into six sectors, namely manufacturing, transport, commercial and distributive trade, households, agriculture and other.

In order to compare the energy content of the different fuels, a common accounting unit, namely, tonne of oil equivalent (toe) is used. This issue also presents the energy balance in terajoules(TJ) for international comparison. The conversion factors are given on page 12.

2.2 Primary energy requirement

The total primary energy requirement of the country decreased by 4.1%, from 1,404 ktoe in 2008 to 1,347 ktoe in 2009 (Table 2.1). Of this, imported fuels (petroleum products and coal) accounted for 82.5% (1,111 ktoe) while locally available sources supplied the remaining 17.5% (236 ktoe).

In 2009, petroleum products which amounted to 741 ktoe comprised mainly fuel oil (30.7%), diesel (27.9%), aviation fuel (14.9%) and gasoline (16.3%).

In 2009, coal was 369 ktoe, which showed a 8.7% decrease over the 404 ktoe of 2008.

The local production (236 ktoe) comprised renewables including bagasse (92.2%), hydro/wind electricity (4.5%), and fuelwood (3.3%).

The total primary energy requirement index, with 1990 as base year (1990 = 100), decreased from 192.2 in 2008 to 184.3 in 2009 while the per capita primary energy requirement decreased by 4.5%, down from 1.11 toe in 2008 to 1.06 toe in 2009.

'Energy intensity' defined as total primary energy requirement (toe) per Rs 100,000 of GDP (in 1990 rupees) provides a measure of the efficiency with which energy is being used in production. As shown in Table 1.3, energy intensity, which was 1.53 in 2008 dropped to 1.43 in 2009. A lower ratio usually reflects a more efficient use of energy.

2.2.1 Local production

Total energy production from local renewable sources decreased by 10.6% from 264 ktoe in 2008 to 236 ktoe in 2009. This was primarily due to a reduction in the production of bagasse. Thus the contribution of bagasse decreased from 246 ktoe to 218 ktoe. However, production of hydro/wind electricity increased from 9.3 ktoe in 2008 to 10.7 ktoe in 2009. (Table 2.1)

2.2.2 Imports of energy sources

Data on imports of energy sources show that some 1,321 ktoe of petroleum products and coal were imported in 2009 compared to 1,451 ktoe in 2008 representing a decrease of 9.0%. Petroleum products went down from 1,075 ktoe to 973 ktoe (-9.5%) and coal decreased from 376 ktoe to 347 ktoe (-7.7%) (Table 2.3).

The import bill of petroleum products and coal went down to Rs 17,408 million in 2009, showing a 37.0% decrease over Rs 27,635 million of the preceding year. (Table 2.5).

2.2.3 Re-exports and bunkering

Of the 1,321 ktoe of imported energy sources in 2009, about 323 ktoe (24.5%) were supplied to marine vessels and aircraft. Re-exports consisted of 110 ktoe of aviation fuel (34.0%), 109.7 ktoe of diesel oil (33.9%), and 103 ktoe of fuel oil (32.0%). The following changes were noted compared to the previous year: Fuel Oil +12.0%, Aviation fuel -15.7%, Diesel -7.4%, overall -5.3% (Table 2.6).

2.3 Electricity

2.3.1 Electricity Generation

Some 2,577 GWh (222 ktoe) of electricity was generated in 2009 as compared with 2,557 GWh (220 ktoe) in 2008, representing an increase of 0.8%. The Independent Power Producers (IPPs) supplied 58.2 % of the electricity generated and the Central Electricity Board (CEB), only 41.8%. Thermal energy represented 95.2% and hydro/wind the remaining 4.8%. The peak power

demand in 2009 reached 388.6 MW (+2.8%) in the Island of Mauritius as compared with 378.1 MW in 2008. (Tables 3.1 - 3.6)

2.3.2 Fuel input for electricity generation

The different types of fuel used for electricity generation are shown in Table 3.7. Fuel input decreased by 2.9% from 751 ktoe in 2008 to 729 ktoe in 2009. The major components of the fuel input were coal, the dominant fuel, (48.9%), fuel oil (25.1%) and bagasse (24.9%).

2.33 Electricity sales & consumption

Electricity sales increased by 0.7%, from 2,054 GWh in 2008 to 2,069 GWh in 2009. The average sales price of electricity went up by 6.1 % from Rs 4.90 per kWh to Rs 5.20 per kWh during the same period (Table 4.7).

The per capita consumption of electricity sold per annum stood at 1,623 kWh in 2009 compared with 1,619 kWh in 2008 (Table 1.3).

2.4 Final energy consumption

Final energy consumption fell by 3.9% from 842 ktoe in 2008 to 809 ktoe in 2009. “Transport” and “Manufacturing” were the two largest energy-consuming sectors accounting for 48.4% and 27.7% of energy consumed respectively. They were followed by “Household” (14.0%), “Commercial and Distributive Trade” (8.9%) and “Agriculture” (0.5%). The details on the different types of fuel consumed by each sector and the respective amounts are given in Tables 4.1 to 4.6

2.4.1 Manufacturing

Energy used for manufacturing processes decreased by 9.7% from 248 ktoe in 2008 to 224 ktoe in 2009. The contribution of electricity was 77 ktoe (9.5%), diesel oil, 46 ktoe (5.7%) fuel oil, 45 ktoe (5.6%), and bagasse, 36 ktoe (4.5%).

2.4.2 Transport

In 2009, some 391 ktoe of energy were used for transportation, representing a decrease of 3.7% over last year’s figure of 406 ktoe. Consumption of gasoline increased from 109 ktoe to 121 ktoe (+11.0%) and that of diesel oil from 154 ktoe to 155 ktoe (+0.6%). Consumption of aviation fuel decreased from 137 ktoe in 2008 compared to 110 ktoe in 2009 (-19.7%) and the use of LPG in the transport sector also decreased from 5.6 ktoe in 2008 to 5.0 ktoe in 2008 (-10.7%).

2.4.3 Commercial and Distributive Trade

Total energy consumption by “Commercial and Distributive Trade” sector rose by 4.3% from 69 ktoe in 2008 to 72 ktoe in 2009. In this sector, electricity consumption increased from 58 ktoe to 61 ktoe (+5.2%). Similarly, LPG increased from 10.9 ktoe to 11.4 ktoe (+4.6%).

2.4.4 Household

Energy consumed by households in 2009 (excluding fuel used for transport) increased from 110 ktoe in 2008 to 113 ktoe in 2009. The two main sources of energy for households were electricity and LPG, representing 51.7% and 41.3% respectively of total energy consumed by households. Consumption of electricity increased by 4.3% and that of LPG by 2.0%.

2.45 Agriculture

Energy consumption in Agriculture went down from 4.5 ktoe in 2008 to 4.1 ktoe in 2009 (-8.9%). Electricity and diesel were the only two sources of energy used in this sector. In 2009, about 1.8 ktoe of electricity were used mainly for irrigation while 2.3 ktoe of diesel oil were used mainly for mechanical operations in field.

3 Water

3.1 Water balance

The estimated water balance for the Island of Mauritius is shown in Table 5.1. The water balance indicates how fresh water resources are distributed. In 2009, the Island of Mauritius registered 4,470 million of cubic metres (Mm^3) of rainfall. Some 1,341 Mm^3 of water was lost through evapotranspiration, while surface run-off and ground water recharge were 2,682 Mm^3 and 447 Mm^3 respectively.

3.2 Rainfall

Table 5.6 shows the amount of rainfall recorded around the Island of Mauritius. During the year 2009, the mean amount of rainfall recorded around was 2,397 millimetres, a 0.6 % increase compared with 2,382 millimetres registered in 2008. March was the wettest month of 2009, registering a mean rainfall of 352 mm whereas September was the driest month with a mean rainfall of only 73 mm.

For the Island of Rodrigues, the mean rainfall registered in 2009 was 948 millimetres compared with 1,055 in 2008. February recorded the highest amount of rainfall with 130 mm and October and November the least with 32 mm. (Table 5.7)

3.3 Water storage level

In 2009, the minimum and maximum percentage water storage level of the different reservoirs was as follows:

Reservoir	% Minimum (month)	% Maximum (month)
Mare aux Vocoas	64 (Jan)	93 (May)
La Nicoliere	59 (Dec)	100 (Jan-Jun),(Aug-Sep),(Nov)
Piton du Milieu	73 (Oct)	100 (Jan-May)
La Ferme	81 (Jan,Oct)	100 (Jan-Jun),(Nov-Dec)
Mare Longue	69 (Jan,Oct)	100 (April)
Midlands Dam	81 (Jan)	100 (Feb-Oct),(Dec)

Mean water level in 2009 for all reservoirs combined together (excluding Midlands Dam) varied from 77% to 94% (Table 5.8). It is to be noted that the mean water level is computed as the average level during a month while the normal is the long term mean averaged over the period 1990 to 1999.

3.4 Water production

In 2009 the total volume of potable water treated by the different treatment plants amounted to 220 million cubic metres (Mm^3), up by 5.3% compared with 209 Mm^3 in 2008. During the same year, average water production from surface and ground water represented 49.7% and 50.3% respectively (Table 5.9).

3.5 Water sales and revenue collectible

Total volume of water sold increased from 108.8 Mm^3 in 2008 to 110.3 Mm^3 in 2009 (+1.4%). In 2009, potable water made up 88.7% of the volume sold and the remaining 11.3% consisted of non-treated water. Water for domestic consumption amounted to 75.1 Mm^3 , accounting for nearly 68.1% of the total volume of water sold (Table 5.10).

The amount of revenue collectible for the year 2009 amounted to Rs 998.8 million, that is an increase of 3.8% over the amount of Rs 961.9 million for 2008 (Table 5.10).

1/ Marechal became operational anew in 2007

Note: 'Long-term mean' refers to: 1971-2000 for Oyster Bay, Plaine Corail, Port Sud Est, Solitude and Pte Canon (mean for the Island);

1981-2000 for Mourouk and St Gabriel;

1982-2000 for Citronelle and Baie Topaze;

1993-2000 for Baie Topaze.

Electricity	2.20	1.60	0.70	0.80	1.3	34.5
Other	0.10	0.10	0.20	0.10	0.2	1.0
None						35.9
Total	100.0	100.0	100.0	100.0	100.0	100.0

Fig. 6.14 - Percentage of households by principal and secondary fuel used for cooking, CMPHS^{1/} 2004**Table 6.11 - Percentage of households by main source of energy used for heating water for bathing purposes-CMPHS^{1/} 2004**

Main source of energy used	% of households reporting				
	1st quarter	2nd quarter	3rd quarter	4th quarter	Year
Gas	49.7	50.3	53.1	51.7	51.2
<i>of which:</i> Stove	38.0	34.9	35.6	34.2	35.7
Water Heater	11.7	15.4	17.5	17.5	15.5
Electricity	27.7	27.4	24.3	27.1	26.7
<i>of which:</i> Electrical system inside bathroom	22.3	21.8	18.7	22.3	21.3
Electric kettle	5.4	5.6	5.6	4.8	5.4
Wood	10.1	11.1	11.5	11.3	11.0
Solar water heater	4.1	5.1	4.4	3.1	4.2
kerosene stove	4.1	2.5	3.7	2.5	3.2
Other	0.3	0.5	0.2	0.3	0.3
Do not use hot water for bathing	4.0	3.1	2.8	4.0	3.4
Total	100.0	100.0	100.0	100.0	100.0

Table 6.12 - Percentage of households by measures taken to reduce electrical energy consumption-CMPHS^{1/} 2004

Measure	% of households reporting				
	1st quarter	2nd quarter	3rd quarter	4th quarter	Year
Turning off lights/electrical appliances when not in use	83.5	81.7	83.5	82.1	94.7
Use of other types of fuel instead of electricity for cooking	51.5	39.9	43.6	35.4	48.8
Use of other types of fuel instead of electricity for water heating	43.9	30.7	34.1	25.8	40.5
Use of low consumption electrical bulbs	39.3	39.8	30.7	27.1	37.2
Use of low consumption electrical appliances	27.6	27.9	18.1	15.1	25.4
