DIGEST OF ENVIRONMENT STATISTICS – 2003

Foreword

This is the second issue of the Digest of Environment Statistics prepared by the Central Statistics Office.

It presents in a single report detailed available data concerning the environment. Many of the statistics presented have been gathered from various institutions and thus some of the data may already be available in other publications. The digest covers a wide range of environmental topics in a readily accessible form to provide a handy reference.

The data provided in this publication and covering the period 1994 to 2003, wherever possible, are the latest available. These may be subject to revision in later issues. All data, unless otherwise stated, refer to the Island of Mauritius.

It is hoped that these statistics will prove useful to the public in general, particularly to planners, decision makers and research workers.

The digest has been prepared with the collaboration of the Ministry of Environment and several other public organisations. The cooperation and assistance of all these organisations are gratefully acknowledged.

Technical Notes	9
Concepts and Definitions	11
Abbreviations and symbols	15
Highlights	17
 CHAPTER 1 - FLORA	
Table	
1.1 - Forest area by category, 1994 – 2003	27
1.2 - Changes in forest land cover, 1994 and 2003	28
1.3 - Local production, imports and consumption of timber, poles and fuelwood, 1994 – 2003	29
1.4 - Forest fires and area affected, 1994 - 2003	30
1.5 - Silvicultural operations carried out in state forest land plantations, 1994 - 2003.	32
1.6 - List of land protected areas, Republic of Mauritius, 2003	33
1.7 - Number of offences detected against forest laws by category, 1994 - 2003	34
1.8 - Forest plantations by type of plants, 1994 – 2003	36
1.9 - Number of seedlings raised, by species, at the nurseries of the Forestry Service, 1994 – 2003	37
1.10 - Number of plants issued freely or sold to the public by the Forestry Service, 1994 – 2003	39
1.11 - Revenue and expenditure of the Forestry Service, 1994 – 2003	40
1.12 - Selling rates of timber by type, class and category, 1994 – 2003	41
1.13 - Private households using wood and charcoal for cooking, 1990 and 2000 Housing and Population Censuses, Republic of Mauritius.	42
 CHAPTER 2 - FAUNA	
2.1 - Number of farmers and livestock population by geographical district, as at March 2003	45
2.2 - Livestock herd and poultry status by geographical district as at March 2003	46
2.3 - Production of selected agro-industrial products, Republic of Mauritius, 1994 - 2003	48
2.4 - Export of monkeys (<i>Macaca fascicularis</i>), feral and captive bred, 1995 - 2003	49
2.5 - Fish production by type of fishery (in fresh - weight equivalent), 1994 - 2003	50
2.6 - Annual fish catch of the coastal (artisanal) fishery by gear - type, 1994 - 2003	51

Table		Page
2.7 -	Number of active fishermen by gear - type, 1994 - 2003	52
2.8 -	Fisherman-days and total catch from the lagoon and off lagoon, 1994 – 2003	53
2.9 -	Catch per fisherman-day, 1994 – 2003	54
2.10 -	Average price of fresh fish and other sea food, 1994 – 2003	55
2.11 -	Annual catch by banks, 1994 – 2003	56
2.12 -	Import,export and trade balance of fish and fish products, 1994 – 2003	57
2.13 -	Total number and type of fishing vessels calling at Port Louis, 1995 – 2003	58
2.14 -	Per capita consumption of fish, 1994 – 2003	59
2.15 -	Cases of poisoning by noxious fish and shell fish, venomous animals and plants, 1993– 2002	60
2.16 -	List of fishable areas, Republic of Mauritius.	61
2.17 -	Percentage of substrate cover at various monitoring stations, 2002/2003	62
2.18 -	List of marine protected areas, 2003	63

CHAPTER 3 - ATMOSPHERE

3.1 -	Monthly mean maximum temperature, 1994 – 2003	67
3.2 -	Monthly mean minimum temperature, 1994 – 2003	68
3.3 -	Monthly mean values of humidity (%) with extremes	69
3.4 -	Monthly total hours of sunshine by region and station, 1994 - 2003	70
3.5 -	Ambient air quality monitoring at Medco Cassis, 2002 - 2003	73
3.6 -	Total emissions and removal of greenhouse gases, , 2000 - 2003	73
3.7 -	Sectoral carbon dioxide emissions from fossil fuels, , 2000 – 2003	74
3.8 -	National inventory of greenhouse gases by source categories, 2003	75
3.9 -	Consumption of controlled ozone-depleting substances by sector, 1994 -2003	76
3.10 -	Consumption of controlled ozone-depleting substances by type of substances, 1994 – 2003	78
3.11 -	Health services (as at 31st December), Republic of Mauritius, 1994 – 2003	80
3.12 -	Respiratory diseases registered in government hospitals, 1993 – 2002	81

	Page
Table 3.13 - Cases of asthma treated as in-patients in government hospitals , 1996 – 2002	82
3.14 - Death registered due to asthma, 1996 – 2002	82
3.15 - Cases of Asthma treated as in-patients in government hospitals by age group and sex, 2002	83
3.16 - Death registered due to asthma by age group and sex, 2002	84
3.17 - Households with members suffering from health problems related to air pollution by type of problem, Republic of Mauritius, 2001	84

CHAPTER 4 - WATER

4.1 - Monthly rainfall, 1994 – 2003	87
4.2 - Yearly rainfall by region, 1994 – 2003	89
4.3 - Water balance,1998 - 2003	90
4.4 - Water utilization, 2003.	91
4.5 - Fresh water abstractions by source, 1994 – 2003	92
4.6 - Characteristics of major reservoirs	93
4.7 - Gross storage capacity of reservoirs	94
4.8 - Percentage water level by month and reservoir, 2003	95
4.9 - Average monthly potable water production from treatment plants and boreholes to distribution systems, 2003	96
4.10 - Water sales by type of tariff of subscribers, 1999 - 2003	97
4.11 - Domestic per capita consumption of water, 1994 – 2003	98
4.12 - Volume of water used by the CEB for hydropower generation, 1994 – 2003	99
4.13 - Guidelines for inland surface water quality	100
4.14 - River water quality by selected physico-chemical parameters for Grand River South East and Grand River North West, Jan-Nov 2002	101
4.15 - Range of levels of Nitrate-Nitrogen, Phosphate and COD for selected regions, 2003	102
4.16 - Volume of wastewater treated by public treatment stations, 1995 – 2003	103
4.17 - Water quality in coastal area - (Terre Rouge Rivulet Bird Sanctuary), 1997 – 2003	104
4.18 - Number of cases of certain notifiable waterborne diseases reported to sanitary authorities, 1994 - 2003	105

	Page
Table 4.19 - Enteritis and other diarrhoeal diseases, 1993 - 2002	106
4.20 - Sea transport, 1994 - 2003	107
4.21 - Contraventions established by the National Coast Guard, 2003	108
4.22 - Mean sea surface temperature around the Island of Mauritius, 1994 – 2003	109
4.23 - Percentage distribution of households by type of water supply and other amenities available, Republic of Mauritius, 1990 and 2000 Housing Censuses	110

CHAPTER 5 - LAND

5.1 - Land use by category, 1986 and 1995	113
5.2 - Utilisation of agricultural land area, 2000 - 2003	114
5.3 - Road network, 1996 – 2003	115
5.4 - No of accidents by severity of accident, 1994 – 2003	116
5.5 - Imports of fertilizers and pesticides, 1994 – 2003	117
5.6 - Consumption of fertilisers, 1994 – 2003	118
5.7 - Land under irrigation, 1996 – 2003	119
5.8 - Number of permits and floor area by region, 1998 – 2003	120
5.9 - Number of permits and floor area by type of building, 1998 – 2003	121
5.10 - Number of permits and floor area by region for residential building, 1998 – 2003	122
5.11 - Number of permits and floor area by region for non - residential building, 1998 – 2003	123
5.12 - Solid waste input by type at Mare Chicose landfill site, 1999 - 2003	124
5.13 - Monthly solid waste input by type at Mare Chicose landfill site, Jan - Dec 2003	125
5.14 - No. of EIA and PER licenses granted by type of project, 1999 – 2003	126
5.15 - Number of establishments by industrial group, Republic of Mauritius, 1999 - 2003	127

CHAPTER 6 - HUMAN SETTLEMENTS

	Page
Table	
6.1 - Main socio-economic indicators, Republic of Mauritius, 1994 and 2003	131
6.2 - Evolution of the population by urban/rural residence and sex between 1990 and 2000 censuses	132
6.3 - Evolution of the population by geographical district and sex between 1990 and 2000 censuses	133
6.4 - Age distribution of the population as enumerated at the 1990 and 2000 censuses	134
6.5 - Population growth in intercensal periods, Republic of Mauritius 1851 - 2000	135
6.6 - Growth of the resident population and vital statistics - Republic of Mauritius, 1994 - 2003	136
6.7 - Life expectancy at birth, 1994 - 2003	137
6.8 - Infant mortality rate by geographical district, 1994 - 2003	138
6.9 - Total number of buildings, residential and partly residential buildings, housing units, households and population, 1990 and 2000 Censuses	139
6.10 - Distribution of buildings by type, 1990 and 2000 Censuses	139
6.11 - Residential and partly residential buildings by type of construction materials, 1990 and 2000 Housing censuses	140
6.12 - Distribution of housing units by occupancy status and type of vacancy, 1990 and 2000 Housing Censuses	140
6.13 - Main energy indicators, Republic of Mauritius, 1994 - 2003	141
6.14 - Primary energy requirement, (Energy unit), Republic of Mauritius, 1994-2003	142
6.15 - Imports of energy sources, (Energy unit), Republic of Mauritius, 1994 - 2003	143
6.16 - Fuel input for electricity production, (Energy unit), Republic of Mauritius, 1994 - 2003	145
6.17 - Final energy consumption by sector and type of fuel (Physical unit), (Republic of Mauritius), 1994 - 2003	146
6.18 - Final energy consumption by sector (Energy unit), (Republic of Mauritius), 1994 - 2003	147
6.19 - Percentage share of final energy consumption by sector, (Republic of Mauritius), 1994 -2003	148
6.20 - Vehicles registered by type, 1994 - 2003	149
6.21 - Road traffic accidents and casualties, 1994 – 2003	151

	Page
Table 6.22 - Imports of motor spirit and gas oil by country of origin, 1999 - 2003	153
6.23 - Imports of lubricating oils and greases by country of origin, 1999 - 2003	155
6.24 - Air Transport, 1994 – 2003	156
6.25 - Tourist arrivals by mode of transport and tourists nights spend during period, 1994 - 2003	157
6.26 - Broadcasting services (end of period), Republic of Mauritius, 1994 – 2003	158
6.27 - Telephone services (end of period), 1994 – 2003	159
6.28 - Health related statistics, 1998 – 2003	160
6.29 - Percentage distribution of private households by amenities available, Republic of Mauritius, 1990 and 2000 Housing Censuses	161
6.30 - Percentage distribution of private households by method of refuse disposal, 1990 and 2000 Censuses	162
6.31 - Private households by principal fuel used for heating water for bathing, Housing and Population Census, 2000	163
6.32 - No. of complaints received at the Pollution Prevention and Control Division of the Department of Environment by category, 1994 – 2003	164
6.33 - Contraventions and notices established by Police De L'Environnement, 2002-2003	165
6.34 - Employment by industrial group and sex, (Republic of Mauritius), March 2003	166
6.35 - Number of accidents by economic activity, bodily location and agency (July 2002 – June 2003), Republic of Mauritius	168
6.36 - Rating of the state of the environment by head of households surveyed, Republic of Mauritius, 2001	169

TECHNICAL NOTES

Introduction

The statistics presented in this report are divided into six main chapters corresponding to the following components of the natural environment: Flora, Fauna, Atmosphere, Water, Land and Human Settlements.

Concept and coverage

The following United Nations manuals have been used as a basis for the compilation of the data on environment statistics.

- A Framework for the Development of Environment Statistics, Statistical Papers, M78, United Nations.
- Concepts and Methods of Environment Statistics, Statistics of Natural Environment, Studies in Methods, F57, United Nations.
- Concepts and Methods of Environment Statistics, Human Settlements Statistics, Studies in Methods, F51, United Nations.
- Glossary of Environment Statistics, Studies in Methods, Series F, No. 67.

The digest covers data for the period 1994 to 2003, wherever possible. Environmental data are collected over a variety of time periods, ranging from decades in some major censuses to monthly, daily, hourly or even continual monitoring. Hence, in some cases, annual data are not available due to the periodicity of censuses and surveys. Chapters of the digest would be reviewed annually with any new material added as soon as practical.

Attempts have also been made, through the use of footnotes and accompanying commentary, to ensure that each table is self-standing and as comprehensive as possible.

Sources

The tables and figures have been compiled with the help of the following government departments, non-governmental and para-statal bodies:

- The Forestry Service - Ministry of Agriculture, Food Technology and Natural Resources.
- National Parks and Conservation Service - Ministry of Agriculture, Food Technology and Natural Resources.
- Albion Fisheries Research Centre - Ministry of Fisheries
- Agricultural Research and Extension Unit (AREU) - Ministry of Agriculture, Food Technology and Natural Resources.

- The Meteorological Services
- Water Resources Unit - Ministry of Public Utilities.
- Central Water Authority
- Central Electricity Board
- Statistics Unit – Ministry of Health and Quality of Life.
- Ministry of Environment and National Development Unit
- Ministry of Local Government and Solid Waste Management
- Waste Water Management Authority

Data in tables whose source(s) is (are) not indicated are from other publications of the Central Statistics Office.

Concepts and definitions

Flora

Flora: A general term for all forms of plant life characteristic of a region, period or special environment.

Protected Area: Legally established land or water area under either public or private ownership that is regulated and managed to achieve specific conservation objectives.

Silviculture: Management of forest land for timber, including

Weeding : Weeding is defined as the removal of unwanted plants, particularly at seedling stage.

Staking : Straightening of young plants bent during cyclones, using guava sticks.

Recruiting : Replacement of dead seedlings at the initial stage of growth.

Wetland: Area of low-lying land where the water table is at or near the surface most of the time. Wetlands include swamps, bogs, fens, marshes and estuaries.

Fauna

Fauna: A general term for all forms of animal life characteristic of a region, period or special environment.

Marine park: Permanent marine reservation for the conservation of species. It constitutes an extension, to the undersea world, of the concept of the terrestrial national park.

Atmosphere

Greenhouse gases (GHG): GHG are gases occurring naturally and resulting from human activities (production and consumption) that contribute directly or indirectly to global warming. Some main naturally existing GHG are Carbon Dioxide (CO₂), methane (CH₄) and Nitrous Oxide (N₂O). Other gases such as Carbon monoxide (CO), oxides of Nitrogen (NO_x), non methane volatile organic compounds (NMVOC) and Sulphur dioxide contribute indirectly to global warming. GHG's act much like a glass greenhouse, trapping heat in the lower levels of the atmosphere and reflecting the heat back to the earth's surface, causing it to heat up.

Ozone depletion: Destruction of ozone in the stratosphere, where it shields the earth from harmful ultraviolet radiation.

Chlorofluorocarbons: Inert, non-toxic and easily liquefied chemicals used in refrigeration, air-conditioning, packing and insulation, or as solvents and aerosol propellants.

Water

Water balance: The water balance is based on long term records of annual average rainfall and indicates how freshwater resources are distributed.

Precipitation: Rain falling from the atmosphere and deposited on land or water surfaces.

Evapotranspiration: Combined loss of water by evaporation from the soil or surface water and transpiration from plants and animals.

Surface runoff: The flow of surface water from rainfall, which flows directly to streams, rivers, lakes and sea. Runoff may cause soil erosion.

Groundwater recharge: Process by which water is added from outside to fresh water found beneath the earth surface.

Ecosystem: The interacting system of a biological community and its non living surroundings.

Temperature: This is a measurement of the intensity (not amount) of heat stored in a volume of water. It affects the solubility of many chemical compounds and can therefore influence the effect of pollutants on aquatic life.

pH : This is the measurement of the hydrogen ion concentration in water. A pH below 7 is acidic (the lower the number, the more acidic the water) and a pH above 7 (to a maximum of 14) is alkaline (the higher the number, the more alkaline the water).

Dissolved Oxygen (DO): This is a measure of the amount of oxygen dissolved in water. DO is essential to the respiratory metabolism of most aquatic organisms. It affects the solubility and availability of nutrients.

Conductivity: This is the measurement of the ability of water to conduct an electric current. It can indicate saline intrusion or other sources of pollution.

Total Dissolved Solids (TDS): This is a measure of the amount of dissolved material in the water. High concentrations of TDS limit the suitability of water as a drinking source and irrigation supply.

Turbidity: This is a measurement of the suspended particulate matter in a water body, which interferes with the passage of a beam of light through the water. High levels of turbidity increase the total available surface area of solids in suspension upon which bacteria can grow. High turbidity reduces light penetration.

Chemical Oxygen Demand (COD): This is a measure of the oxygen required to oxidize all compounds in water. It represents the amount of organic matter in the media.

Fluoride: Fluoride may be present as the result of the natural decomposition of rocks.

Chloride: Chloride appears in the highest concentrations in natural fresh water systems. It is important in terms of metabolic processes. High Chloride levels can make freshwater unpalatable and unsuitable for various uses including agriculture.

Sulphate: Sulphate usually occurs in natural waters. High concentrations of SO_4^{2-} can have a laxative effect on human beings.

Nitrate: This is a measure of the most oxidised and stable form of nitrogen in a water body. It is used by plants as a nutrient to stimulate growth. Excessive amount of NO_3^- can lead to eutrophication.

Phosphate: Phosphorus in the form of phosphate commonly occurs in all natural waters. It is a nutrient and is used by plants to stimulate growth. High concentrations of PO_4^{3-} can cause eutrophication.

Pesticide: a product or substance used in the control of pests which may affect public health or attack resources of use to man.

Waste water: Used water typically discharged into the sewage system. It contains matter and bacteria in solution or suspension.

Sedimentation: Settling of matter to the bottom of a liquid or water body, notably a reservoir.

Land

Land use: Land use refers to the main activity taking place on an area of land, for example, farming, forestry or housing.

Built-up areas: Built-up areas consist of land under houses, industrial zones, quarries or any other facilities, including their auxiliary spaces, deliberately installed so that human activities may be pursued.

Nutrient: A nutrient is a substance, element or compound necessary for the growth and development of plants.

Solid waste: These are useless and sometimes hazardous material with low liquid content. Solid waste includes domestic garbage, industrial and commercial waste, sewage sludge, wastes resulting from agricultural and animal husbandry operations and other connected activities and demolition wastes.

Landfill: Final placement of waste in or on the land in a controlled or uncontrolled way according to different sanitary, environmental protection and other safety requirements.

Environmental impact assessment (EIA): Analytical process that systematically examines the possible environmental consequences of the implementation of projects, programmes and policies.

Preliminary environmental report (PER) is a short form of EIA and this preliminary analysis is undertaken to identify the impacts associated with the proposed development and the means of mitigation

Human settlements

Human settlements: Integrative concept that comprises (a) physical components of shelter and infrastructure and (b) services to which the physical elements provide support, that is, community services such as education, health, culture, welfare, recreation and nutrition.

Gross Domestic Product (GDP): GDP is the aggregate money value of all goods and services produced within a country out of economic activity during a specified period, usually a year, before provision for the consumption of fixed capital.

Primary energy requirement: It is the sum of imported fuels and locally available fuels less re-exports of bunkers and aviation fuel to foreign aircraft after adjusting for stock changes.

Energy intensity: Energy intensity provides a measure of the efficiency with which energy is being used in production.

Life expectancy at birth: the average number of years that a new born child would be expected to live if subjected to the mortality conditions expressed by a particular set of age-specific death rates.

ABBREVIATIONS AND SYMBOLS

Abbreviations

Rs mn	Rupees million
Rs	Rupees
US\$	US dollar
LPG	Liquefied petroleum gas
%	Percentage
f.o.b	free on board

Environment Statistics - 2003

Highlights

1. Flora

1.1 Land area

Table 1.1 shows the forest area by category for the Island of Mauritius. In 2003, total forest area was 56,608 hectares, of which 22,068 (39%) were state-owned and the remaining 34,540 hectares (61%) were private-owned.

Under the category state-owned, about 12,260 hectares were planted areas while the National Park and the nature reserves accounted for nearly 6,570 and 800 hectares respectively. Forest area under the category “Pas Geometriques” represented about 630 hectares.

Most of the privately-owned lands falls under forest land which includes scrubs and grazing land and they are estimated at 28,000 hectares all over the island. Total reserves of the privately-owned lands accounted for 6,550 hectares.

1.2 Protected areas

The land protected areas as shown in Table 1.6 total almost 14,000 hectares. The Black River Gorges National Park represents nearly 6,570 hectares followed by the mountain and river reserves which are all privately owned, by 3,800 and 2,740 hectares respectively. The nature reserves constituting the islets accounts for nearly 620 hectares.

2. Fauna

2.1 Livestock

Cattle, goat, sheep and pig represent the major livestock in the country. As at March 2003, goats dominated the livestock population with an estimated population of 20,015 heads followed by pigs, 12,921, cattle, 6,822 and sheep, 406 heads (Table 2.1).

2.2 Agro-industrial production

Meat production from cattle, pig, goat and sheep constitute the main livestock production. In 2003, meat production from beef, of which nearly 92% was imported, constituted the leading contributor averaging about 74% of the total livestock

production. The remaining livestock production were shared by pigs (23%) and goat and mutton (3%) (Table 2.3).

Poultry production of the country was estimated at about 30,000 tonnes in 2003, a 2% increase over the year of 2002 which was 29,300 tonnes.

2.3 *Fish catch and production*

Table 2.5 shows fish production by type of fishery for the years 1994 to 2003 and this was marked by a steady decline from 17,426 tonnes in 1994 to 9,709 tonnes in 2003. However compared to 2002, an increase of 4% was noted in the fish production for the year 2003.

As shown in Table 2.6, the annual fish catch of the coastal fishery by gear-type was characterised by fluctuations and decreased from 1,663 tonnes in 1994 to 1,166 in 2003 with fish catch from basket trap accounting almost 42% of the total artisanal catch.

Fish catch per fisherman-day was likewise characterised by fluctuations but managed to register an annual mean of 4.3 kilograms (Table 2.9).

2.4 *Protected areas*

The marine protected areas consist of marine parks, fishing reserves and wetland. In 2003, the area occupied by the fishing reserves were about 6,350 hectares followed by the marine parks, 838 hectares and wetland, 26 hectares respectively (Table 2.18).

3. Atmosphere

3.1 *Air quality*

In 2001, in order to address the air quality problem in Mauritius, the Ministry of Environment purchased fixed and mobile air quality stations. The fixed station is installed at Medco, Cassis since May 2001.

The main parameters under investigation are Dust (PM_{10}), Ozone, Sulphur Dioxide, Nitrogen Dioxide, Carbon Monoxide, Total Suspended Particles and Lead.

For the year 2003, the average results for all the parameters under study showed that the levels of ambient pollutants near Medco, Cassis were well below the norms (Table 3.5).

3.2 Greenhouse gas (GHG)

Mauritius as a party to the United Nations Framework Convention on Climate Change (UNFCCC) is required to update and report periodically on the inventory of anthropogenic emissions and removal of greenhouse gases using IPCC (Intergovernmental Panel on Climate Change) guidelines. GHG are gases occurring naturally and resulting from human activities which act much like a glass greenhouse, trapping heat in the lower levels of the atmosphere and reflecting the heat back to the earth's surface, causing it to heat up.

3.2.1 Total GHG emissions and removals

In 2003, some 2.78 million tonnes of Carbon Dioxide, the major greenhouse gas, were emitted in the atmosphere while only some 0.24 million tonnes were removed. Thus net emission of 2.55 million tonnes represented an increase of 5.7% over last year (Table 3.6).

The emission of minor greenhouse gases was as follows: Carbon Monoxide (0.07 million tonne), Sulphur Dioxide (0.03 million tonne), Non-Methane volatile organic compound (0.02 million tonne), Oxides of Nitrogen (0.02 million tonne), Methane (0.01 million tonne) and Nitrous Oxide (0.001 million tonne).

3.2.2 Carbon dioxide emissions from fuel combustion activities.

In 2003, total Carbon dioxide emissions from fuel combustion activities increased by about 5% from 2.65 million tonnes in 2002 to 2.78 million tonnes. Carbon dioxide from energy production alone contributed to 51% of the total emissions followed by transport, 29% and manufacturing industries, 14% (Table 3.7).

3.2.3 Greenhouse gas inventory

The national inventory of greenhouse gas emissions by source categories for the year 2003 is given in Table 3.8. Carbon dioxide with an emission of 2.78 million tonnes was the major greenhouse gas injected in the atmosphere. Most of this gas was produced as a result of fuel combustion activities such as electricity production, transport and manufacturing processes.

3.3 Ozone-depleting substances

The consumption of ozone-depleting substances increased by 66% from 136 metric tonnes in 2002 to 227 metric tonnes in 2003. Almost 98% of the ozone-depleting substances constituted of the hydrochlorofluorocarbons, HCFC's (Table 3.10)

4. Water

4.1 Water balance

The water balance is based on long term records of annual average rainfall and indicates how fresh water resources are distributed.

In 2003, the island of Mauritius received on average 4,006 million cubic metres (Mm^3) of precipitation (rainfall) which is an increase of about 3% over the previous year. Some $1,202 Mm^3$ (30%) of this water was lost through evapotranspiration, while surface runoff and ground water recharge accounted for $2,403 Mm^3$ (60%) and $401 Mm^3$ (10%) respectively (Table 4.3).

4.2 Water utilisation

The water demand in 2003 was estimated at $1,030 Mm^3$, of which, $491 Mm^3$ (47%) were used for irrigation, $305 Mm^3$ (30%) for hydropower and $234 Mm^3$ (23%) for domestic and industrial purposes (Table 4.4).

Around 86 % of the total water demand was met by surface water and the remaining 14 %, by ground water.

4.3 Water consumption

During the period 1994 to 2003, the domestic per capita consumption of water has risen from 148 to 161 litres per day at an annual growth rate of 1.0% (Table 4.11). Consumption was at its weakest in 1999 at 149 litres per day, which was due to the severe drought prevailing during that year.

5. Land

5.1 Land use

Urbanisation and the development of industries and infrastructure have led to a loss of agricultural land. Detailed data on land use for the island of Mauritius are available only for 1986 and 1995.

Between 1986 and 1995, the proportion of land under agriculture dropped from 48.2% to 46.4%, and that of forestry from 35.1% to 30.6% whilst built-up areas increased from 13.4% to 19.5% (Table 5.1 and figure 16).

As shown in Table 5.2, around 93% of our effective agricultural land was under sugarcane plantation with the remaining being planted with tea, tobacco and foodcrops.

5.2 Fertiliser and other inputs

Intensive use of chemical based fertilisers and other agro-chemicals may contribute to the pollution of the environment through the leaching of nitrate to ground water.

The total amount of fertilisers consumed and its breakdown by main nutrient components are shown in Table 5.6. The consumption of fertilisers for the year 2003 amounted to 63,507 tonnes, showing a decrease of 1,232 tonnes (-1.9%) over 2002. The nutrient contents consisted of nitrogen, phosphate and potash with respective proportions of 17.0%, 6.4 % and 18.1% of the product weight.

5.3 Waste disposal

Increasing waste generation and consequently its disposal pose a major environmental problem. Waste collected are either sent directly to the Mare Chicose Sanitary Landfill, which started operating by the end of 1997, or go through the process of compaction at the four transfer stations (St Martin, Roche Bois, Poudre D'Or and La Brasserie) before their transportation to the landfill site.

The total amount of solid waste landfilled at Mare Chicose went up from 363,913 tonnes in 2002 to 372,434 tonnes in 2003, representing an increase of 8,521 tonnes or 2.3% (Table 5.12).

5.4 Environmental Impacts Assessment (EIA) and Preliminary Environmental Report (PER) Licences

The Department of Environment grants EIA licences as from the end of 1993 and PER licences as from September 2002 for undertakings (projects) which have an impact on the environment or on human health. These undertakings are listed in the First Schedule of the Environment Protection Act, 2002.

The number of EIA licences issued during the period 1999 to 2003 and number of PER licences issued as from September 2002 are shown in Table 5.14. In 2003, the numbers of EIA and PER licences granted were 95 and 65 respectively. The highest in number among the EIA licences was “industrial development” which accounted for 29% and among the PER licences, “land parcelling”, 43%.

6. Human settlement

6.1 The economy

Table 6.1 provides some key socio-economic indicators in order to show the structural changes that have occurred in the economy during the last decade.

From 1994 to 2003, Gross Domestic Product (GDP), which measures the total value of production, has increased in nominal terms from Rs 64,048 million to Rs 157,210 million representing an annual growth rate of 10.5%. The share of agriculture in GDP decreased from 9.8% in 1994 to 6.3% in 2003, that of manufacturing, from 22.6% to 21.4% while that of the financial and business services increased from 14.9% to 19.4%.

During the same period, the population increased by 9.9% from 1,112,800 to 1,222,800 and the population density from 548 per km² to 602.

6.2 Energy

While being an essential ingredient for the economic development and for the well being of the population, energy-related activities are also a source of major concern for the environment. They are by far the most important contributors of air pollutants, through the emission of carbon dioxide and other greenhouse gases.

6.2.1 Primary energy requirement

The total primary energy requirement of the country increased by 6% from 1,169 ktoe in 2002 to 1,238 ktoe in 2003. Around 77% of the total primary energy requirement was met by imported fuels (oil, LPG and coal) and the remaining 23%, obtained from local sources (bagasse and hydro). Details on the primary energy requirement by energy source are shown in Table 6.14.

6.2.2 Inputs for electricity production

The different types of fuel used for electricity production expressed in energy units are shown in Table 6.16. Fuel oil, which represented about 172 ktoe of total energy used in 2002, increased by 14% to reach to 196 ktoe in 2003 while the amount of bagasse used fell by 3%.

6.2.3 Final energy consumption

In 2003, final energy consumption reached around 813 ktoe, an increase of 6% over the figure of 765 ktoe in 2002. Changes in the different sectors were as follows: "Commercial and Distributive Trade" (+14%), "Transport" (+7%), "Manufacturing" (+4%) and "Household" (+4%). No Change has been registered in the consumption of energy by the agricultural sector (Table 6.18).

The largest consumers were the transport and manufacturing sectors, which accounted for 48% and 32% of the total consumption respectively (Table 6.19).

6.2.4 Transport

Industrialisation, continuous economic growth and higher standard of living have led to a rapid increase in transport services over the recent years. A number of environmental problems are associated with transport, especially emission of carbon dioxide and other pollutants such as nitrogen oxide, volatile organic compounds, sulphur dioxide and particulate.

In 2003, petroleum products used for transportation amounted to about 161,270 tonnes of diesel oil, 89,240 tonnes of gasoline, 2,220 tonnes of liquefied petroleum gas (LPG) and 123,630 tonnes of aviation fuel. Between 1994 and 2003, consumption of gasoline and diesel oil rose at an annual growth rate of 1.3% and 5.5% respectively (Table 6.17).

6.3 Stock of registered motor vehicles

In 2003, the fleet of motor vehicles stood at 276,371, up by 4% over the year of 2002. Between 1994 and 2003, the number of vehicles increased at an annual growth rate of 4.8%.

6.4 Complaints

The number of complaints by category received by the Pollution Prevention and Control Division at the Department of Environment is shown in Table 6.32 for the years 1994 to 2003. The number of complaints rose from 370 in 1994 to 1,768 in 2003, showing an annual increase of nearly 19%. In 2003, the largest cause of complaint was noise, accounting for 33% of all complaints.

6.5 Contraventions

In 2003, the Police de L'Environnement issued 4,571 contraventions of which illegal littering accounted for 87% (3,965).

During the same period, 3,666 notices were issued to drivers of vehicles emitting black smoke (Table 6.33).

Carbon monoxide (CO)	ppm	0.0	0.0	1.8	8.4	0.3	1.4	8.0
Total suspended particles (TSP)	µg/m ³	47.2	29.6	65.9	107.5	56.4	57.7	150.0
Lead	µg/m ³	0.0	0.0	0.1	0.0	0.0	0.0	1.5

Source: Ministry of Environment and National Development Unit.

¹: Estimate²: 24-hour standard except for Ozone, Carbon monoxide and lead which are based on 1 hour, 8 hour and 3 month averages respectively.

Note: (i) Conversion coefficients (at 25° C and 1013 bar) have been used to convert the ambient air quality standards.

(ii) Measurements of the parameters are taken on a quarter hourly basis and the averaging time used is 24 hours.
