

**NATIONAL ACCOUNTS
OF
MAURITIUS**

2009

National Accounts of Mauritius - 2009

Foreword

National Accounts of Mauritius – 2009 is the twenty-seventh issue of an annual report on National Accounts published by the Central Statistics Office. This publication presents detailed data available as at March 2010 on the performance of the economy for the years 2006 to 2009. The report also includes estimates of Quarterly National Accounts for the period 2006 to 2009.

Estimates on national accounts in this report have been worked out using as base the results of the 2002 Census of Economic Activities.

Chapter 1 gives a description of the main concepts and definitions used.

The methodology and main data sources used, as well as the statistical tables and analysis for Annual National Accounts are given in Chapter 2. A table on Balance of Payments is included in this chapter.

Chapter 3 presents Annual National Accounts Aggregates for the years 1991 to 2005.

Quarterly National Accounts including the methodology and main data sources used are given in Chapter 4.

Foreign trade statistics are presented in Chapter 5 while Chapter 6 covers production data and selected indicators.

The Institutional Sector Accounts for the years 2002 to 2005 are presented in Chapter 7. A Supply and Use Table and an Input/Output Table for the year 2002, based on data from the 2002 Census of Economic Activities, have been compiled and are given in Chapter 8 and Chapter 9 respectively.

The preparation of this report has necessitated the mobilisation of considerable resources and the cooperation of numerous organisations, both public and private. Their assistance is gratefully acknowledged.

CHAPTER 1 - CONCEPTS AND DEFINITIONS	
1. General	7
2. Definition of main aggregates	12
CHAPTER 2 - ANNUAL NATIONAL ACCOUNTS, 2006 - 2009	
SECTION 1 - SOURCES AND METHODS	
1. Production account of each economic activity group	19
1.1 - Agriculture, hunting, forestry and fishing	19
1.2 - The Sugar industry	21
1.3 - Mining and quarrying	22
1.4 - Manufacturing	22
1.5 - Electricity, gas and water supply	23
1.6 - Construction	23
1.7 - Wholesale and retail trade, repair of motor vehicles, motorcycles and personal household goods	24
1.8 - Hotels and restaurants	25
1.9 - Transport, storage and communications	27
1.10 - Financial intermediation	28
1.11 - Real estate, renting and business activities	29
1.12 - General government	30
1.13 - Education	31
1.14 - Health and social work	31
1.15 - Other community, social and personal service activities and private households with employed persons	32
2. Gross National Income and its appropriation	32
3. Gross Domestic Fixed Capital Formation	33
4. Estimates of growth rates	34
SECTION 2 – STATISTICAL ANALYSIS	
1. Year 2008	37
2. Year 2009	40
Symbols and abbreviations	45

SECTION 3 - MAIN TABLES

Table 2.1 - Main National Accounts aggregates, 2006 - 2009	46
2.2 - Growth rates and ratios, 2006 - 2009	47
2.3 - Gross Domestic Product by industry group at current basic prices, 2006 - 2009	50
2.4 - Percentage distribution of Gross Domestic Product by industry group at current basic prices, 2006 - 2009	51
2.5 - Gross Domestic Product by industry group - sectoral growth rates (% change over previous year), 2006-2009	52
2.6 - Contribution of industry groups to GDP growths, 2006 – 2009	53
2.7 - Gross Domestic Product by industry group - sectoral deflators (% change over previous year), 2006 - 2009	54
2.8 - National Disposable Income and its appropriation at current prices, 2006 - 2009	55
2.9 - Expenditure on Gross Domestic Product at current prices, 2006 - 2009	57
2.10 - Expenditure on Gross Domestic Product at current prices (percentage distribution), 2006 - 2009	57
2.11 - Expenditure on Gross Domestic Product – Growth rates (% change over previous year), 2006 - 2009	58
2.12 - Gross Domestic Fixed Capital Formation at current prices by type and use, 2006 - 2009	59
2.13 - Gross Domestic Fixed Capital Formation - Annual real growth rates (%) by type and use, 2006 - 2009	62
2.14 - Gross Domestic Fixed Capital Formation - Deflators (% over previous year), 2006 - 2009	63
2.15 - Composition of Gross Domestic Fixed Capital Formation by public and private sector at current prices, 2006 - 2009	64
2.16 - Production and generation of income accounts by kind of economic activity, 2006 - 2008	65
2.17 - Production and generation of income accounts by kind of economic activity for general government, 2006 - 2008	71
2.18 - Contribution of public sector to Gross Domestic Product, 2006 -2008	74
2.19 - General government current expenditure classified by function and type, 2004 - 2006	75
2.20 - Balance of Payments, 2006 - 2008	78

CHAPTER 3 – ANNUAL NATIONAL ACCOUNTS AGGREGATES, 1991-2005

(Revised based on the results of the Census of Economic Activities, 2003)

3.1 - Main national accounts aggregates, 1991 - 2005	83
3.2 - Growth rates and ratios, 1992-2005	84
3.3 - Gross Domestic Product by industry group at basic prices, 1991-2005	85

3.4 - Gross domestic product- sectoral growth rates, (% change over previous year), 1992 - 2005	86
3.5 - National disposable income and its appropriation at current prices, 1991 - 2005	87
3.6 - Expenditure on Gross Domestic Product at current prices , 1991 - 2005	88
3.7 - Expenditure on Gross Domestic Product - Growth rates, (% change over previous year), 1992 - 2005	89
3.8 - Gross Domestic Fixed Capital Formation at current prices by type and use, 1993 - 2005	90
3.9 - Gross Domestic Fixed Capital Formation - Annual real growth rates (%) by type and use, 1994 – 2005	91

CHAPTER 4 - QUARTERLY NATIONAL ACCOUNTS, 2006 - 2009

SECTION 1 - SOURCES AND METHODS

SECTION 3 - TABLES

Table 4.1 - Quarterly Gross Domestic Product by industry group at current basic prices, Q ₁ 2006 - Q ₄ 2009	113
4.2 - Gross Domestic Product - sectoral growth rates (% over corresponding period of previous year), Q ₁ 2006 - Q ₄ 2009	114
4.3 - Quarterly expenditure on Gross Domestic Product at current prices, Q ₁ 2006 - Q ₄ 2009	115
4.4 - Expenditure on Gross Domestic Product - Growth rates (% over corresponding period of previous year), Q ₁ 2006 - Q ₄ 2009	116
4.5 - Seasonally adjusted Gross Domestic Product - sectoral growth rates (% , quarter to quarter), Q ₁ 2006 - Q ₄ 2009	117

CHAPTER 5 - FOREIGN TRADE STATISTICS

Table 5.1 - Distribution of total exports (f.o.b. value) by selected commodities, 2006-2008	121
5.2 - Distribution of imports by section (c.i.f. value), 2006-2008	122
5.3 - Classification of imports (c.i.f. value) into consumption by industrial origin and use, 2006-2008	123
5.4 - Distribution of imports (c.i.f. value) into consumption classified by economic categories, 2006-2008	126
5.5 - Annual change (%) in the domestic export price indices (EPI – Base year 2003=100) of selected goods, 2007 - 2008	128
5.6 - Annual change (%) in the domestic export volume indices of selected goods, 2007 - 2008	128
5.7 - Annual change (%) in the import price indices (IPI – Reference year 2003=100) of selected goods, 2007 - 2008	129
5.8 - Annual change (%) in the import volume indices (IPI – Reference year 2003=100) of selected goods, 2007 - 2008	130

CHAPTER 6 - PRODUCTION DATA AND SELECTED INDICATORS

Table 6.1 - Local production of selected commodities for the Island of Mauritius, 2006-2008	133
6.2 - Production of selected commodities, 2006-2008	134
6.3 - Total number of permits and floor area by type of building, 2006-2009	136
6.4(a) - Total number of permits and floor area by region for residential buildings, 2006-2009	137
6.4(b) - Total number of permits and floor area by region for non-residential buildings, 2006-2009	138
6.5 - Number of permits for residential buildings by range of floor area, 2006-2009	139
6.6 - Series of selected indicators, 1992-2009	140
6.7 - Selected social and economic indicators, 1999-2008	141
6.8 - Internal purchasing power of the rupee, 1970-2009	142

CHAPTER 7 – INSTITUTIONAL SECTOR ACCOUNTS - 2002 - 2005

7.1 - Integrated Economic Account for the Total Economy, 2002 – 2005	147
7.2 - Integrated Economic Account for the General Government, 2002 – 2005	150
7.3 - Integrated Economic Account for the Non-Financial Corporations, 2002 – 2005	153
7.4 - Integrated Economic Account for Financial Corporations, 2002 – 2005	156
7.5 - Integrated Economic Account for Households, 2002 – 2005	159
7.6 - Integrated Economic Account for the Rest of the World, 2002 – 2005	162

CHAPTER 8 - SUPPLY AND USE TABLE - 2003 165

CHAPTER 9 - INPUT/OUTPUT TABLE - 2003 187

ILLUSTRATIONS

Figure 2.1 - GDP at basic prices by sectors, 2003 - 2009	48
2.2 - Annual real growth rate of GDP, 2003 - 2009	48
2.3 - Consumption and gross national saving, 2003 - 2009	49
2.4 - Saving and investment rates (% of GDP at market prices), 2003 - 2009	49
2.5 - Expenditure on GDP at market prices, 2003 - 2009	56
2.6 - National Income and its appropriation, 2003 - 2009	56
2.7 - GDFCF by type of capital goods, 2003 - 2009	60
2.8 - Annual real growth rate of GDFCF, 2003 - 2009	60
2.9 - Composition of GDFCF, 2009	61
4.1 - Quarterly GDP estimates at current basic prices, Q ₁ 2006 - Q ₄ 2009	107
4.2 - GDP growth rates, quarterly (percentage change over corresponding period of previous year) and annual, Q ₁ 2006 - Q ₄ 2009	108
4.3 - GDP growth rates(over corresponding quarter of previous year and quarter to quarter),	

Q ₁ 2002 – Q ₄ 2009	112
5.1 - Imports by economic categories, 2003 - 2009	127
6.1 - Building permits and floor area, residential buildings, 2003 - 2009	131
6.2 - Building permits and floor area, non - residential buildings, 2003 - 2009	131

CHAPTER 1 - CONCEPTS AND DEFINITIONS

1. General

National accounting represents a system of accounts, which describes the functioning of the national economy in such areas as production, distribution, consumption and accumulation. It has been developed to facilitate the practical application of economic theory. National accounting therefore furnishes a unified system for studying the economic condition of a country and its changes over time.

1.1 The System of National Accounts (SNA)

A System of National Accounts (SNA) consists of a coherent, consistent and integrated set of macro-economic accounts based on internationally agreed concepts, definitions, classifications and accounting rules. The United Nations Statistical Office in 1953 produced the first publication "A System of National Accounts (SNA)", which was revised in 1968. Since then, the SNA has undergone an extensive revision in the light of country experiences during the twenty-five years. The new version, the 1993 SNA was published in 1993 and countries have been advised to implement the new system as soon as possible. Whilst the basic structure has remained more or less the same, certain changes have been brought in, to take account of new developments and concerns.

1.1.1 Implementation of the 1993 System of National Accounts (1993 SNA)

Mauritius started the compilation of national accounts based on the 1993 SNA in 2001. As from April 2001, the national accounts data are produced according to the new concepts and definitions. Historical series as from the year 1990 have been reworked according to the 1993 SNA and are given in Chapter 3.

In addition to the change in the system of accounting, the office has also adopted the latest revision of industrial classification, that is, the International Standard Industrial Classification of Economic Activities ISIC, Revision 3 of 1990, for the classification of economic activities. As from April 2001, economic activities are classified according to NSIC which is an adapted version of ISIC Rev 3. National Standard Industrial Classification is an adapted version of ISIC. This change in classification will affect the value added of some industry groups but does not affect the overall Gross Domestic Product (GDP).

Some of the main changes in terminology, valuation and classification that are relevant to Mauritius are given at paragraph 4.

1.2 National Accounts of Mauritius - historical background

The first estimates of national income and expenditure date back to the year 1948 when (GDP) stood at some R 300 million. The measures were then confined to 'Value Added' figures only and were published in the Year Book and later, in the Digest of Statistics.

Estimates for 1948 to 1975 were based on the 1953 System of National Accounts. In 1983, following the availability of more detailed data which were collected through an Annual Census of Production, a new series was produced for the years 1976 onwards, based on the 1968 SNA. In April 2001, the Central Statistics Office adopted the 1993 SNA, following the availability of updated and more detailed data from the 1997 Census of Economic Activities. Data series worked according to the 1993 SNA are available for the years 1990 onwards. In June 2005, the series have been revised based on the results of the 2002 Census of Economic Activities.

As from 2005, Quarterly National Accounts (QNA) estimates starting from the first quarter of 1999 are compiled and published by the Central Statistics Office. These quarterly figures provide information needed for monitoring short term economic development. The publication of quarterly data is also one of the requirements for the country to graduate to the Special Data Dissemination Standard (SDDS) of the International Monetary Fund (IMF).

The quarterly estimates are compiled according to guidelines provided in the IMF manual entitled "Quarterly National Accounts Manual – Concepts, Data Sources and Compilation", which is itself based on the 1993 SNA.

1.3 Main changes between 1968 SNA and 1993 SNA.

1.3.1 Terminology

- (i) Taxes on production and imports replaces 'Indirect taxes'. 1993 SNA argues that it is extremely difficult, if not impossible, to determine the real incidence of different kinds of taxes, and that the use of the terms 'direct' and 'indirect' taxes has fallen out of favour in economic theory. Taxes on production and imports comprise all taxes that enterprises incur by engaging in production.
- (ii) Taxes on products and Other taxes on production replaces 'Commodity taxes' and 'Other indirect taxes' respectively and are explained as follows:

Taxes on products are payable on good and services when they are produced, sold or used. Examples are excise duties, import duties and Value Added Taxes (VAT).

Other taxes on production are taxes payable out of the value added of producers. This category of taxes includes taxes levied on property, fixed assets and labour employed. Examples are municipal rates, motor vehicle licences and business licences.

- (iii) Change in inventories replaces 'Changes in stocks'.
- (iv) Financial Intermediation Services Indirectly Measured (FISIM) replaces 'Imputed bank Service Charges'. The argument is that the service charges exist and that they are not really imputed, but it is not possible to measure them through direct observation.
- (v) Primary incomes replaces 'Factor incomes'. Primary incomes are payable out of the value added created by production. They include compensation of employees, property income (interest, dividends, etc.) and taxes on production and imports net of subsidies. The concept of 'factor incomes', comprising the first two categories of primary incomes, is no longer used in 1993 SNA.
- (vi) Gross National Income (GNI) replaces 'Gross National Product (GNP)'. The rationale behind the change is that this aggregate is a concept of income rather than a concept of production.

1.3.2 Changes in the valuation of output

Under the 1968 SNA, GDP was estimated at factor cost. It is that part of the cost of producing the GDP, which consists of gross payments to factors of production (labour, land and capital). This valuation had some limitations in the sense that value added at factor cost is essentially a measure of income and not of output. 1993 SNA changes the concept from factor cost to basic prices, which is a better measure of output. 1993 SNA recommends that output be valued at *basic prices*. The basic price is the amount receivable by the producer exclusive of any taxes on products and inclusive of any subsidies on products.

Definitions of the different type of prices and the inter relationship between them:

- (i) Basic price

The basic price is the amount receivable by the producer exclusive of taxes payable on products and inclusive of subsidies receivable on products. The equivalent for imported products is the c.i.f (cost, insurance and freight) value, that is, the value at the border of the importing country.

- (ii) Purchaser's price

The purchaser's price is the amount payable by the purchaser. This includes trade margins realised by wholesalers and retailers (by definition, their output) as well as transport margins (that is, any transport charges paid separately by the purchaser) and non-deductible VAT.

1.3.3 *Changes in the methods of estimation*

(i) Annual growth rates

The growth rate of GDP worked out so far was calculated using a Fixed Base Laspeyres Index (fixed weight). It was observed that this index could not adapt to change in the structure of the economy. One of the recommendations of 1993 SNA is to use a Chain Index, which is equivalent to using the previous year's structure for calculation of growth rates.

(ii) Output of the General Government

Output of General Government is estimated as the sum of production costs, which include mainly salaries paid to staff. Another important cost is the consumption of fixed capital, which was previously not included because of lack of data. For this new series, consumption of fixed capital has been estimated and is included in the value added of General Government.

(iii) Output of the Central Bank

Under 1968 SNA, the output of the Central Bank was calculated by the income approach, which included salaries and profit of the bank. However, it was observed that the profit declared or transferred varied considerably from year to year and growth rate of the banking sector fluctuated a lot and did not show clearly the growth of that sector. It has therefore been recommended that the output of the Central Bank be measured as the sum of production costs, which include salaries paid to staff and consumption of fixed capital, in line with the recommendations of the Inter-Secretariat Working Group on National Accounts (ISWGNA).

1.4 **Changes in classification by industry group**

The most important change brought in by adopting NSIC Rev. 3, is the classification of activities pertaining to the General Government sector to their respective activity groups. When NSIC Rev. 2 was adopted, most of the activities of the General Government sector were classified under the heading 'Producer's of government services', although no such class existed in the International Standard Industrial Classification. This procedure was adopted by many countries, including Mauritius, because of data constraints.

The new NSIC Rev. 3 has been developed to enable the collection of data on sectors (e.g education, health etc.) which, according to analysts and policy makers, are becoming more and more important. Thus establishments previously grouped under 'Producers of government services', are now reclassified in the relevant industry groups according to their activities. As an example, in the new classification, government institutions involved in education activities are grouped under the heading 'Education'.

The main changes by industry group are given below:

- (i) Agriculture, hunting, forestry and fishing: Include part of expenditure of the Ministry of Agriculture, previously classified under "Producers of Government Services".
- (ii) Mining and quarrying: No change.
- (iii) Manufacturing: Electricity produced by sugar factories as by-products are still included in sugar milling, while electricity produced by the Independent Power Producers (IPPs) of the sugar industry is excluded and shown under "Electricity, gas and water".
- (iv) Electricity, gas and water supply: Include electricity produced by the Independent Power Producers (IPPs)
- (v) Construction: Construction works carried out by the "Public works committee" of the Local Government is now transferred to "Public administration and defence; compulsory social security".

- (vi) Wholesale & retail trade; repair of motor vehicles, motorcycles, personal and household goods: Repair of motor vehicles, motor cycles and of personal and household goods previously under “Community, social and personal services” is now classified here.
- (vii) Hotels and Restaurants: Formerly included in “Wholesale, retail trade, restaurants and hotels”.
- (viii) Transport, storage and communications: No change
- (ix) Financial intermediation: Activities of financial intermediaries and insurance companies, formerly classified under ‘Financing, insurance, real estate and business activities’ are now classified here.
- (x) Real estate, renting and business activities: These activities previously classified under ‘Financing, insurance, real estate and business activities’ are now classified here. This sector, also includes activities of the Central Information System Division, which was previously recorded in ‘Public administration and defence; compulsory social security’.
- (xi) Public administration and defence; compulsory social security: This class includes a variety of government *administrative* activities, including administration of government providing social security programmes. These activities were formerly recorded under the heading ‘Producers of government services’.
- (xii) Education: This category includes public as well as private education provided by institutions. Activities of private institutions were previously recorded under ‘Community, social and personal services’ and those of public institutions under ‘Producers of government services’.
- (xiii) Health and social work: This activity group comprises health activities provided by both public and private institutions. Activities of private institutions providing health services were formerly recorded under ‘Community, social and personal services’ while those provided by public institutions, under ‘Producers of government services’. This group also includes activities that are directed to provide a variety of social assistance, counseling and welfare.
- (xiv) Other community, social and personal service activities and private households with employed persons: This class includes other service activities which cannot be classified in the above categories. It includes activities of professional organisations, trade unions, religious and political organisations, as well as recreational, cultural and sporting activities and other services such as hairdressing, laundering and funeral activities. These activities were previously classified under “Community, social and personal services”.
- (xv) Financial intermediation services indirectly measured (FISIM): FISIM replaces ‘imputed bank service charges’ and is measured in the same way as in the 1968 SNA, that is, the total property income receivable (e.g. interest) less their total interest payable, excluding the value of any property income from their own funds.

The 1993 SNA recommends that the consumption of these services be allocated among users. However, because of practical difficulties of allocating FISIM among the different users, FISIM is recorded as intermediate consumption of a nominal industry.

1.5 Data collection, compilation and publication

Benchmark data for the compilation of National Accounts statistics are collected through the Census of Economic Activities which is conducted at five year intervals. Annual data are collected through sample surveys of establishments. In addition, many organisations, both public and private, are regularly contacted for obtaining the latest available information on the key sectors of the economy. Data are collected under the authority of the Statistics Act 2000 which also lays great emphasis on the confidentiality aspect.

The presentation of the tables broadly follows the recommendations of the United Nations 1993 System of National Accounts (SNA). A brief description of the methodology used for the preparation of the Accounts is given in Chapter 2 of this report for Annual National Accounts (ANA) and in Chapter 4 for Quarterly National Accounts (QNA).

National Accounts data are disseminated via an annual report entitled “The National Accounts of Mauritius” and in “Economic and Social Indicators”. All these publications are published by the Central

Statistics Office and are posted on the website of the office (<http://statsmauritius.gov.mu>).

Economic and Social Indicators on annual national accounts used to be published twice a year, in April and October. As from 2003, following requests for more frequent updates, they are published four times during the year namely in January, April, July and October. The issue published in April now provides a first forecast of National Accounts aggregates for the current year together with revised figures for earlier years. Subsequent issues in the course of the year provide for figures updated in the light of latest information available.

Economic and Social Indicators on quarterly national accounts are published about three months after the end of a quarter. To meet this target, estimates for the current quarter are based on selected indicators that capture quarterly movements. Administrative data that are available on a monthly or quarterly basis, the most important one being data from the Value Added Tax (VAT) system which have the advantage of being timely and of having a wide coverage are also extensively used. Some surveys requesting quarterly income and expenditure data have also been conducted among enterprises which are large contributors in specific sectors.

Estimates for a quarter are revised at subsequent quarters when new and more accurate information become available, to improve their accuracy. It is to be noted that quarterly estimates are sometimes subject to important revisions because of the limitations in the source data.

For consistency, the estimates for the four quarters of a given calendar year are benchmarked with the latest annual estimates which are more accurate as they are mostly compiled from income and expenditure data of enterprises obtained through surveys. In incorporating the more accurate annual information into the quarterly estimates, the accuracy of the quarterly data is enhanced while the quarterly pattern inherent in the QNA is preserved.

1.6 The Report

This report contains the latest available Annual National Accounts data relating to the years 2005 to 2008 and Quarterly National Accounts for the years 2005 to 2008. Explanatory notes on the concepts, definitions are given in Chapter 1. The various methods used for the computation of the estimates together with the statistical tables for Annual National Accounts and Quarterly National Accounts, are given in Chapter 2 and Chapter 4 respectively. The statistical tables are preceded by a brief analysis.

- Chapter 1 - Concepts and Definitions
- Chapter 2 - Annual National Accounts, 2006 – 2009
 - Section 1* - *Sources and methods*
 - Section 2* - *Statistical Analysis*
 - Section 3* - *Main Tables, 2006 - 2009*
- Chapter 3 - Annual National Accounts Aggregates, 1991 - 2005
- Chapter 4 - Quarterly National Accounts, 2006 - 2009
 - Section 1* - *Sources and methods*
 - Section 2* - *Statistical Analysis*
 - Section 3* - *Tables, 2006 - 2009*
- Chapter 5 - Foreign Trade statistics
- Chapter 6 - Production data and selected indicators
- Chapter 7 - Institutional Sector Accounts, 2002 - 2005
- Chapter 8 - Supply and Use Table (SUT), 2002
- Chapter 9 - Input/Output Table, 2002

1.7 Supply and Use Table (SUT)

It has been possible, by making use of benchmark data available from the 2002 Census of Economic Activities and other sources, to construct a Supply and Use Table (SUT) for the year 2002. The SUT brings together the detailed goods and services accounts in the format of matrices with the product groups in the rows and the different categories and components of supply and use in the columns. In this matrix, commodity flow of goods and services are traced from different sources of supply to different categories of use. This table is an important analytical tool to study economic repercussions. Using 2002 data as benchmark and currently available data, SUT for 2002 to 2005 have been worked out and published on the website.

1.8 Input/Output Table (I/O)

The Input/Output (I/O) Table gives the picture of input composition and output distribution of each product. On the assumption of stable or linear technical correlation between input and output, the table serves as an effective analytical tool for the study of economic repercussion. For instance, it illustrates the ultimate effect (direct and indirect) of a unit increase in domestic demand for a certain good on product output or value added.

1.9 Problems and limitations of published data

The main problems of the office in obtaining relevant data can be grouped as follows:

(i) *Response rate to enquiries*

The response rate to our annual enquiries is one of the major problems encountered by the office. It appears that the fear that the Central Statistics Office discloses information to other authorities still prevails among some suppliers of data. Data are collected under the authority of the Statistics Act 2000 which guarantees the absolute confidentiality of all information. No information relating to costs of production, capital employed or profits of an individual enterprise can be revealed to any authority or person.

(ii) *Non-uniformity of accounting years*

All firms do not have uniform accounting years. Data referring to the last "twelve-months" period may in fact spread over two or three consecutive years. Only in some cases, have data been adjusted before incorporation in the National Accounts. The time reference of the accounts is the calendar year.

The varying accounting years are also major obstacles to the preparation of the Capital, Finance and Balance Sheet Accounts.

2. Definition of main aggregates

The concepts and definitions used in this publication are those stated in the United Nations System of National Accounts (SNA) Manual - A System of National Accounts 1993.

(i) *Taxes on production and imports*

Taxes on production and imports comprise all taxes that enterprises incur by engaging in production. There are two categories of taxes, namely taxes on products and other taxes on production.

Taxes on products are payable on goods and services when they are produced, sold or used. Examples are excise duties, import duties and Value Added Taxes (VAT).

Other taxes on production are taxes payable out of the value added of producers. This category of taxes includes taxes levied on property, fixed assets and labour employed. Examples are municipal rates, motor vehicle licenses and business licenses.

(ii) *Gross output*

Gross output of industries covers the value in the market of goods and services produced, including work in progress and products for own use. Valuation is usually at basic prices. The imputed rent of

owner-occupied dwellings is also included.

The basic price is the amount receivable by the producer exclusive of taxes on products and inclusive of subsidies on products. The equivalent of imported products is the c.i.f. value at the border of the importing country.

Gross output for "general government" and for "non-profit institutions serving households" are computed as the sum of the cost of intermediate consumption expenditure, compensation of employees and consumption of fixed capital.

(iii) Intermediate consumption

"Intermediate consumption of industries" covers non-durable goods and services used up in production and includes repairs and maintenance of the capital stock and is valued at purchasers' prices.

The purchasers' price is the amount payable by the purchaser exclusive of deductible taxes on products (e.g deductible value added tax).

"Intermediate consumption of general government" is made up of acquisitions (purchases and transfers in kind) of new goods and services on current accounts.

(iv) Value added

The value added is equal to the gross output at basic prices less the value of intermediate consumption at purchasers' prices.

(v) Gross Domestic Product (GDP)

The sum of value added of all domestic producers gives the Gross Domestic Product (GDP). It represents the aggregate money value of all goods and services produced within a country out of economic activity during a specified period usually a year, before provision for the consumption of fixed capital.

(vi) GDP at basic prices

GDP at basic prices is obtained as the difference between output and intermediate consumption whereby output is valued at basic prices and intermediate consumption at purchasers' prices.

(vii) GDP at market prices

GDP at market prices is equal to the GDP at basic prices plus taxes (net of subsidies) on products.

(viii) Gross National Income (GNI)

GDP plus net primary income from the rest of the world gives Gross National Income (GNI).

(ix) Gross National Disposable Income (GNDI)

The sum of Gross National Income (GNI) and net transfers from the rest of the world gives Gross National Disposable Income (GNDI).

(x) Gross Domestic Fixed Capital Formation (GDFCF)

Gross Domestic Fixed Capital Formation (GDFCF) consists of the net additions to the assets of producers of tangible reproducible goods which have an expected lifetime of use of more than one year. These assets are buildings, plants, machinery and transport equipment. The additions are valued at purchasers' prices. Non-reproducible tangible assets such as land and mineral deposits are not included in gross capital formation. However, outlays on improvement of land and development of mining sites are considered as gross domestic fixed capital formation.

Durable goods purchased by households, with the exception of dwellings, are not classified as capital formation but are treated as consumption expenditure.

(xi) Change in inventories

Change in inventories includes the value of the physical change in inventories of raw materials, work in progress and finished goods held by producers.

(xii) Final Consumption expenditure

Consumption expenditure is made up of final consumption expenditure of households and of government.

Government final consumption expenditure is further disaggregated into collective and individual consumption expenditure. **Collective** expenditure consists of the services which government provides to the community as a whole, for example, security and defence whereas **individual** expenditure is made up of expenses incurred in providing services which are mostly beneficial to individuals, mainly in respect of health and education.

Actual Government final consumption expenditure refers to expenditure incurred for the provision of collective services.

Final consumption expenditure incurred by households comprises the value of goods and services purchased by households including the value of imputed rent of owner occupied dwellings. For a better measure of standard of living, actual private final consumption expenditure is used.

Actual private final consumption expenditure covers goods and services supplied to households, irrespective of whether these goods and services are actually paid by government or households themselves. Consequently, it consists of expenditure incurred by households and government on the provision of individual services.

(xiii) Gross National Saving

Gross National Disposable Income (GNDI) less total final consumption expenditure gives Gross National Saving.

(xiv) Exports and Imports of goods and services

Both exports and imports are measured on an f.o.b. basis.

Exports and imports of goods are compiled according to the General Trade System, using the national boundary as the statistical frontier. All goods entering the country are recorded in imports and goods leaving the country, in exports. However, for the sake of continuity and consistency gross imports and exports through the customs and the free zone area are shown separately.

(xv) Compensation of employees

Compensation of employees comprises all payments of wages and salaries by producers to their employees. Payments in kind and contributions to social security and to private pension fund, casualty insurance and similar schemes are also included.

Wages and salaries in cash comprise all payments which employees receive in respect of their work, before deductions of employees' contributions to social security schemes. Payments such as refund of traveling of work, commissions, overtime, bonuses, and cost of living allowances are also included.

Payments in kind include goods and services provided to employees free of charge or at markedly reduced costs which are clearly of direct benefit to the employees as consumers.

(xvi) Gross operating surplus

Gross operating surplus is defined as the excess of value added over the cost of employees' compensation and other taxes on production and imports net of subsidies.

(xvii) Financial intermediation services indirectly measured (FISIM)

FISIM is the difference between interest received and interest paid by banks excluding those received on own funds. As it is difficult to allocate FISIM to the intermediate consumption of different industries, the total value of FISIM is imputed to a nominal industry with a negative value added.

(xviii) Goods-producing industries

Goods-producing industries comprise "Agriculture, hunting, forestry and fishing", "Mining and quarrying", "Manufacturing", "Electricity, gas and water supply" and, "Construction".

(xix) Service industries

Service industries include "Wholesale and retail trade; repair of motor vehicles, motorcycles, personal and household goods", "Hotels and restaurants", "Transport, storage, communications", "Financial intermediation", "Real estate, renting and business services", "Public administration and defence; compulsory social security", "Education", "Health and social work", "Other community, social and personal service activities and private households with employed persons".

CHAPTER 2

ANNUAL NATIONAL ACCOUNTS

Section 1 – SOURCES AND METHODS

1. Production Account of Economic Activity Group

1.1 Agriculture, hunting, forestry and fishing

The agricultural sector contributed 4.4% to the Gross Domestic Product in 2008. The activities in this sector are presented in the following sub-groups:

- Industrial crops (sugar cane, tea and tobacco)
- Food crops, fruits and flowers
- Livestock, poultry and related products
- Agricultural services
- Forestry and hunting
- Fishing
- Government services

(i) **Data sources**

- Ministry of Agro Industry & Fisheries
- Mauritius Chamber of Agriculture
- Mauritius Sugar Syndicate
- Agricultural Research and Extension Unit (AREU)
- Mauritius Meat Authority (MMA)
- Annual Survey of Employment and Earnings
- Household Budget Surveys
- Special enquiries from food crop planters, livestock and poultry breeders and providers of agricultural services

(ii) **Methodology**

Separate production accounts are prepared for each of the sub-groups mentioned above. Apart from sugar and tea, agricultural activities are performed mainly by small planters, breeders and fishermen who do not keep proper records of their transactions. Because of the lack of proper accounts, a variety of methods, based essentially on the commodity flow approach, is used to estimate gross output, intermediate consumption and value added.

(a) **Industrial crops**

Sugar cane: Details on the sugar industry are given separately in Section 1.2.

Tea and Tobacco: Quantities and prices of tea and tobacco leaves are available from the Tea and Tobacco Board respectively. Intermediate inputs per hectare are computed based on information obtained from a few tea estates and tobacco planters. Total intermediate consumption is then obtained by applying the appropriate rates of inputs to the total area under cultivation.

(b) **Food crops, fruits and flowers**

Food crops: Since July 1997, monthly data on food crops production and area harvested are obtained from the Agricultural Research and Extension Unit (AREU), which accounts for about 80% of total production. Estimates of backyard production are made on the basis of consumption data collected through the Household Budget Surveys. Retail prices of about forty food crops and fruits are collected

weekly by the Prices unit. This enables the valuation of the output for each product at basic price by deducting transport costs and retail margin from its retail price value.

Ad-hoc production cost surveys are regularly carried out to provide the necessary information on inputs. Intermediate consumption expenditure is then estimated by applying appropriate rates of inputs to the total acreage under cultivation. Some of the inputs, for example fertilizers, pesticides, seeds are cross-checked with imports and local production figures.

Fruits and flowers: Monthly production of banana and pineapple and area harvested are obtained from AREU. As regards other fruits, the number of fruit trees in bearing age is estimated based on the "1985 Fruit Trees Survey" carried out by the Extension Service Division of the Ministry of Agro Industry and Fisheries. Production is first estimated in quantity using an average yield per tree, taking into account the climatic factor. This production is valued at basic prices.

The main source of data for estimating production of flower is exports data from the Foreign Trade unit. A separate estimate is worked out for locally sold flowers, based on the number of weddings, deaths, religious ceremonies, etc.

(c) *Livestock, poultry and related products*

The Mauritius Meat Authority (MMA) forwards a monthly return on the number of heads and carcass weight of local/imported cattle, sheep, goats and pigs slaughtered at the Abattoir. To these, are added the weight of off-abattoir slaughters estimated from permits issued by the Ministry of Agro Industry and Fisheries. The total quantity multiplied by a weighted average retail price gives the gross output at basic prices (after deducting retail margins and transport costs). Estimates of intermediate expenditure on cattle feeds, salt and water etc. are made and deducted from the gross output to obtain value added.

Poultry and egg production are calculated from data obtained through the questionnaires sent to all large producers. These data are supplemented with estimates made for small breeders. Estimates of backyard production are based on the number of broilers sold by the large establishments and on the quantity of feeds sold.

Estimates of milk production are obtained from the Animal Production Division of the Ministry of Agro Industry and Fisheries.

(d) *Agricultural Services*

(a) Government

Details are provided at Section 1.12.

(b) Non-government

Establishments engaged in non-government agricultural services provide services like land preparation, de-rocking, etc. Their respective production accounts are worked out from statistics obtained either from published reports or from direct surveys.

(e) *Forestry and hunting*

Estimates of forestry production namely, wood processed by sawmills and, to a lesser extent, firewood are made on the basis of information obtained from the Forestry Department.

Hunting, mainly deer hunting, is undertaken during a specific period of the year. The associations of hunters provide data on the production of venison. This is valued at basic prices as for other livestock.

Intermediate costs for both forestry and hunting are negligible so that the gross output is composed essentially of value added.

(f) *Fishing*

The Ministry of Agro Industry and Fisheries provides data on the quantity of fish caught. Separate figures are given in respect of lagoon and bank fishing. These are then valued at market prices available from

the Prices unit. The transport and retail margins are estimated and deducted from the market price value to give gross output at basic prices. Intermediate inputs for lagoon fishing is very low as the fishermen who are engaged in fishing in coastal waters, use artisanal methods and the catch is usually sold fresh. Bank fishing involves higher costs as the fish are caught in high seas in larger vessels. Also, these fish are sold frozen.

1.2 The Sugar Industry

The share of the sugar industry in total GDP was 2.5% and export of sugar represented around 17.8% of total domestic exports in 2008. Sugarcane plantations occupy about 90% of total land under cultivation.

There are three categories of growers in the sugar industry, namely "miller", "metayer" and "owner" planters. Millers are owners of sugar factories and large plots of land around these factories. In 2007, they numbered 6 and cultivated sugarcane on an area of 30,258 hectares. Metayers are normally employees of the millers who are allowed to grow sugarcane on their lands. There were 22,390 owner-planters who cultivated 34,545 hectares of land.

Value added generated by the sugar industry is attributed, for national accounting purposes, to the following industrial activity groups:

Agriculture: the final product is sugarcane. Both millers and planters are engaged in its production.

Manufacturing: the final product is sugar and its by-products, molasses, scums and electricity, which excludes Independent Power Producers (IPPs). Only millers are engaged in this activity.

Transport: includes only the millers' own account transport of sugarcane, sugar and other inputs

Distribution: includes activities of brokers, shippers and the Mauritius Sugar Syndicate:

(i) **Methodology**

The period from the growing stage up to the marketing of all sugar produced covers eighteen months. Production is valued on an accrual basis, so that output relating to crop year, say 2004/2005 is treated as production for calendar year 2004. The sugar cane crop of a given year normally extends from July to June of the following year.

Sugar is marketed solely through the Mauritius Sugar Syndicate. This agency provides data on value and price of sugar, both local sales and exports' proceeds. All the expenses incurred in respect of marketing are also given.

Production accounts are compiled using information from surveys and other data made available by the Mauritius Chamber of Agriculture.

The items of expenditure therein are scrutinised and then allocated to the intermediate expenses of the respective industries as mentioned above.

(ii) **Production Account of Sugar Cane**

Separate accounts are prepared in respect of millers and planters.

The gross proceeds from the sales of sugar and its by-products are obtained from the Mauritius Sugar Syndicate. The gross output of agriculture comprises 78% of the gross proceeds as the remaining 22% accrue to millers to cover the milling cost.

Intermediate expenses in respect of sugarcane cultivation owned by millers are extracted from the statements provided by the Mauritius Chamber of Agriculture. As regards owner planters, the country is divided into four main regions and detailed production cost per arpent is prepared regionwise based on information collected from personal interviews of planters. Intermediate consumption also takes into consideration expenditure incurred on new plantations – a 'ratooning' cycle of 10 years is assumed.

Manufacturing: The end product is sugar and only millers are engaged in its production. The gross output is worked out from the gross proceeds of sugar. The main item under goods consumed is sugarcane; other inputs include milling cost and marketing expenses which are obtained from the Mauritius Chamber of Agriculture and the Mauritius Sugar Syndicate.

Transport: The sugar estates and millers provide their own means of transport. Most of their canes, sugar and other inputs are transported by their own lorries. The 'Transport' activity is valued at cost. The expenditure incurred in respect of purchases of materials and services, compensation of employees and consumption of fixed capital are obtained from surveys. The total of these aggregates gives the gross output. Transport cost is then imputed, on a pro-rata basis, to the intermediate consumption expenditure of the agriculture and manufacturing sectors.

Distribution: The gross output is computed from the related expenditure items as given in the Mauritius Sugar Syndicate report. The cost component consists mainly of elements of value added.

1.3 Mining and quarrying

The activity of mining and quarrying covers salt production, stone and sand quarries. The share of this industry in the Gross Domestic Product is negligible. Estimates of gross output and value added are based on information collected through special enquiries.

1.4 Manufacturing

The manufacturing sector is the largest sector in the Mauritian economy. It contributed to 20.1% of GDP in year 2008 compared to 15% in the early eighties.

(i) Sources

- Annual Survey of Large Establishments
- Annual Survey of Employment and Earnings
- Trade Statistics
- Household Budget Surveys
- Census of Economic Activities
- Quarterly Employment Survey in EOE - Export Oriented Enterprises (mainly ex.EPZ)

(ii) Methodology

The manufacturing sector is more conveniently analysed under the following three broad groups

- Sugar Milling
- EOE
- 'Other' manufacturing enterprises

Sugar: Production account in respect of sugar milling is prepared from annual reports of the Chamber of Agriculture and from financial statements of the Mauritius Sugar Syndicate as explained in section 1.2.

Other Manufacturing establishments are surveyed once a year through the Annual Survey of Large Establishments.

In August/September, a questionnaire is sent to a representative sample of large establishments to collect information on employment, labour costs, inputs, sales and inventories. Production accounts are worked out for each of the ISIC groups. Technical ratios such as labour costs/gross output, value added/gross output and labour costs/value added are also calculated. These are used to make estimates for the non-respondents and also help in forecasting exercises.

1.5 Electricity, gas and water supply

This sector covers the activities of two public enterprises, namely the Central Electricity Board (CEB) and the Central Water Authority (CWA) as well as the Independent Power Producers (IPPs) which provide electricity to the national grid.

The generation of electricity throughout the island is undertaken by the CEB and the IPPs, while its distribution rests solely with the CEB. The CWA is responsible for the storage and supply of water.

The enterprises are required to fill in two questionnaires annually. The first relates to the income and expenditure accounts of the current year, requesting detailed data on receipts, employment, labour costs, purchase of goods and services. Through this questionnaire, the enterprise is also requested to give a forecast for the forthcoming year. The second questionnaire collects information on investment in buildings and machinery for the estimation of GDFCF by type of goods. In addition, the parastatal bodies CEB and CWA regularly publish their income and expenditure accounts, which are used extensively for the preparation of production accounts.

1.6 Construction

The construction industry consists of the activities of:

- General builders and civil engineering contractors
- Small contractors and special trade contractors
- Public authorities engaged in capital works - Ministry of Public Infrastructure, Land Transport and Shipping and local authorities
- Own-account construction carried out by individuals

(i) Sources

- Building permits statistics
- Financial Report of Accountant-General's Department
- Trade Statistics
- Housing and Population Census
- Household Budget Surveys
- Special surveys of building contractors and parastatal bodies

(ii) Methodology

The gross output of the construction industry is the value of investment on residential and non-residential buildings, roads, electricity and communications networks, land improvement and reclamation, maintenance and repair services, etc. The methodology adopted varies with the type of construction and the source of statistical information.

The main source of data is the records of building permits kept by the Ministry of Public Infrastructure, Land Transport and Shipping and the local authorities. The total volume (floor area) of building construction, whether performed by contractors or individuals, is compiled at the office from these records.

A few 'small' contractors are interviewed to obtain the price charged per square metre for the construction of dwellings and its breakdown into labour costs and materials consumed. These prices vary with the size and location of the building. In addition 'large' builders and contractors are surveyed to obtain value of projects completed during the year. Supplemented with investment statistics, collected for the computation of the fixed capital formation, an estimate of gross output in the private sector is derived.

Data on construction works (value and expenses) carried out by the Ministry of Public Infrastructure, Land Transport and Shipping and local authorities are obtained from their respective accounts as well as from the Financial Report of the Accountant's General Department. These are used to evaluate gross output of

construction in the public sector.

Another element of the construction industry is the repair and maintenance of buildings, both residential and non-residential, performed by the various contractors and public authorities. Estimates are made from benchmark data from:

stock of buildings updated from the 2000 Housing Census

repairs and maintenance expenses by households from Household Budget Surveys

Some items of intermediate consumption, e.g. aggregates, paints, cement, iron bars, are cross-checked with production and imports statistics.

1.7 Wholesale and retail trade, repair of motor vehicles, motorcycles and personal and household goods.

This group contributed 12.3% to the Gross Domestic Product of the country in the year 2008.

(i) Sources

Register of licence holders

Trade Statistics

Agricultural Statistics

Special enquiries from docks and stevedoring and large distributive enterprises

Census of Economic Activities

Value Added Tax Department

Survey of large establishments

Road transport statistics

(ii) Methodology

Wholesale and retail trade: The gross output for wholesale and retail trade is estimated as the gross margins obtained between sale and purchase values of goods sold. These goods can be categorised into two groups: imported goods and locally manufactured goods.

Imported goods: The basic data used for the computation of wholesale and retail margins on imported goods are obtained from the annual tabulations on imports. Imports are classified itemwise according to the Standard International Trade Classification (S.I.T.C., Revision 3) and for each item the quantity, C.I.F. value, customs and excise duties are available.

These data are first grouped into broad economic categories namely intermediate, final consumption and capital goods. Margins are estimated as the difference between the 'landed cost' and the retail price for each item. Wholesale margins are estimated using available information from 2002 Census of Economic Activities (2002 CEA) and additional data collected through annual special enquiries from "large" enterprises engaged in landing, storage, clearing and forwarding activities. Retail margins are estimated from information available from the 2002 CEA.

Locally manufactured goods: Data on local production and exports available from VAT Department are classified by ISIC. Local sales are then computed and coded in SITC. The wholesale/retail rates of margin are determined based on the 2002 Census of Economic Activities and these rates are applied for each SITC section.

The agricultural products used to compile the wholesale and retail margin are: fresh vegetables, fresh fruits, fish, eggs and flowers. Data is collected by the Prices Unit (Producer prices) and the Consumer Prices Unit (Retail prices) of this office. The wholesale and the retail margin for fresh vegetables and fresh fruits (banana and pineapple) is the difference between the retail prices and the producer prices. Margins for "other

fruits", fish, eggs and flowers are estimated using a percentage of the gross output valued at basic prices.

Other activities:

Estimates are also made in respect of margins obtained from the following:

Mauritius Sugar Syndicate for the marketing of sugar worked out from data obtained by mail questionnaire.

Lottery and pool organisers based on information obtained from the Value Added Tax Department.

Ship handling activities using value of ships' stores supplied.

Other activities such as auctioneers and scrap metal dealers which are estimated using data collected at the Census of Economic Activities.

Intermediate consumption incurred by the distributive trades are estimated on the basis of benchmark data collected for the Census of Economic Activity (CEA 2002) and is used to derive the value added.

The production account is then worked out from the aggregated data on gross output and intermediate consumption expenditure.

Repair of motor vehicles, motorcycles and personal and household goods.

For establishments engaged in the repair of vehicles, the production account is worked out using data from the 2002 Census of Economic Activities, the age distribution of vehicles registered and import figures of spare parts, lubricants, and other materials used in repair works. These are supplemented with an annual mail survey covering all "large" garages and a sample of "small" establishments.

Other repair services reported at the census of economic activities concerned mainly repairs of electronic goods. The value added is calculated in line with imports of electronic goods.

1.8 Hotels and Restaurants

In 2008 this sector contributed 8.6 % of the country Gross Domestic Product.

(i) Sources of data

Bank of Mauritius: The main source of data for calculation of output of the sector is the Bank of Mauritius which provides estimates of Tourism receipts.

Census of Economic Activities: The Census of Economic Activities collects benchmark data for the hotels and restaurants sector every five years.

The Bi-ennial Survey of Outgoing Tourists (SOT): The Bi-ennial Survey of Outgoing Tourists (SOT) conducted jointly by the CSO and the Ministry of Tourism, Leisure and External Communications supplements data on expenditure by tourists.

The Household Expenditure Survey (HBS): Results of The Household Expenditure Survey were used to cross check Mauritian expenditure in hotels, bars and restaurants.

The Passport and Immigration Office: The number of tourist arrivals is obtained from passenger traffic statistics.

Local Authorities: The register of license holders compiled by the Local Authorities provides the total number of hotels and restaurants in operation.

(ii) Components of the output of the Hotels and Restaurants Sector

Benchmark data are collected from all hotels and restaurants through the Census of Economic

Activities every five years. Gross output of the hotels and restaurants sector is made up of the following:

- **A tourist component** comprising expenditure of tourists and accounting for 88% of the output of Hotels and Restaurants.
- **A local component** comprising expenditure of Mauritians in hotels, restaurants, small bars, canteens and on catering and accounting for remaining 12% of the total output.

For reliability of estimates the aggregates compiled for this sector were cross checked with data from other sources. The output of hotels and restaurants resulting from tourists was checked for consistency with other available sources namely from data obtained from the 2002 Survey of Outgoing Tourists (SOT2002). In the light of SOT2002 results, the expenditure of tourists in hotels was calculated as a percentage of the Bank of Mauritius figure of Tourism earnings in 2002. The figures for the local component obtained from the latest Census of Economic Activities (CEA2002) were compared and adjusted with Mauritians expenditure in hotels, bars and restaurants from the results of the Household Expenditure Survey (HBS).

(iii) Computation of annual estimates

For intercensal years the establishments in the hotels and restaurants sector are not surveyed due to the low response rate and time constraint. Therefore a proxy measure is adopted.

An estimate of output is worked out for the local component based on annual growth in number of households and the CPI component measuring prices of meals in bars and restaurants.

Given that estimates of tourism receipts are regularly provided by the Bank of Mauritius a percentage of tourist earnings is adopted for the output of hotels and restaurants from tourists.

The production account of this sector is based on technical ratios calculated from benchmark data collected through the census of Economic Activities.

During intercensal years, a sample of hotels and restaurants are surveyed to revise the production structure, if needs be. Other ratios from the Survey of Outgoing Tourist, leading indicators for activities of the hotels and restaurants sector such as the number of room nights/beds nights spent during the year, the total number of restaurants and cafés operating from register of licence holders and supplementary information collected from personal interviews of operators in the sector are also considered.

(iv) Constant price estimates

Presently the number of tourist arrivals is used as a proxy for measuring volume change of the value added at current price of the tourist component and the CPI component measuring price of meals in bars and restaurants is used to deflate value added at current price generated by Mauritians in this sector.

1.9 Transport, storage and communications

This group contributed 10.9% to the Gross Domestic Product in 2008 and covers a wide range of activities grouped under the following:

Land transport

Water transport

Services allied to transport, namely cargo handling, ports and airport services, travel agencies and storage and warehousing

Air transport

Communication services

(i) Sources of data

National Transport Authority

Financial Report of the Accountant-General's Department

Mauritius Chamber of Agriculture
Annual Survey of Employment and Earnings
Household Expenditure Surveys
Special enquiries from: Mauritius Telecom, docks and stevedoring companies, bus,
lorry and contract car companies
Personal interviews of taxi, lorry and van owners
Census of Economic Activities

(ii) Methodology

Land transport: The enterprises in this activity group consist of operators of buses, lorries, vans, contract cars and taxis.

Statistics on number of buses, lorries and contract cars operating, obtained from the National Transport Authority, provide leading indicators. The 'large' establishments namely the bus, lorry and contract car companies are interviewed by mail questionnaire and the resulting working ratios are applied to estimate gross output, intermediate consumption and labour cost in this sub sector.

A similar method is used to estimate the gross output and value added of taxis and vans. Information on income and expenditure per vehicle is obtained from personal interviews of taxi and van owners. The estimates of gross output for buses and taxis are cross-checked with data on consumption obtained from Household Expenditure Surveys.

The production account for lorries engaged in the transport of sugarcane and sugar is worked out separately, as explained in section 1.2.

Water transport: Ship owners and shipping agents are interviewed by mail questionnaire. As very scarce information is obtained from this source, indirect methods are used to estimate output. Indicators such as volume of goods loaded and unloaded and statistics on movement of ships are used.

Services allied to transport:

Most of the enterprises engaged in these activities employ more than 10 persons. This sector covers mainly activities carried by the Mauritius Ports Authority (MPA), the Cargo Handling Corporation (CHC), ports and airport services and storage and warehousing (comprising mainly The Mauritius Sugar Terminal Corporation). Information required for the estimation of gross output, intermediate consumption, value added etc, are obtained through mail questionnaires.

The activity of the Civil Aviation Department, which is one of the government industries, is also included here. The relevant information for the preparation of its production account is obtained from the Financial Report of the Accountant General's Department.

Information on the operation of large travel agencies, forwarding agencies and tour operators is obtained from direct enquiries annually.

Estimates are also made for non-response and small units not covered by the annual survey.

Air transport: The main enterprise engaged in this activity is Air Mauritius Ltd which provides data through mail questionnaires for working out the production account of this sector.

Telecommunication services: The main contributor is the Mauritius Telecom and survey questionnaire is sent annually to obtain information on inputs and outputs. All the other 'large' establishments engaged in telecommunication services are surveyed annually. This activity group also comprises the Mauritius Post Ltd.

1.10 Financial intermediation

The activities in this group can be categorised into three sub groups: (i) insurance corporations, (ii) banks and (iii) other financial intermediaries

(i) Sources of data

Bank of Mauritius
The Registrar of Companies
Financial Services Commission
Annual Survey on Income and Expenditure

(ii) Methodology

(i) Insurance

The activity of insurance is intended to provide customers with protection against certain risks. It is also a form of financial intermediation where funds are collected from policyholders and invested in assets that are held as technical reserves to meet future claims.

The insurance enterprises do not charge a separate fee for the service they provide. Whenever they do charge explicit fees, they are treated as payment for services and included in the output of the enterprise. The value of those services for which there is no explicit charge must be estimated indirectly from total receivables and payables of the enterprises, including the income accruing from investment of their reserves.

Data for the production accounts of insurance companies are collected via mail questionnaires quarterly and annually.

The gross output of insurance enterprises is calculated as:

+ Total premiums earned
+ Total premiums supplements (interest, dividend and rent)
- Claims due
- Changes in actuarial reserves
= Output of services to policyholders
+ Commission fees explicitly charged

The Sugar Insurance Fund Board is considered to be an equalizing fund. Its output is measured as the sum of production costs.

The service charged for general insurance is allocated to industries in the same proportion as premiums paid by each industry.

As the adequacy of the life fund of most of the insurance enterprises is determined triennially by actuarial valuation, an estimate based on the life fund is made for changes in actuarial reserves.

(ii) Banks and Other Financial Intermediaries

Data on the activities of this sub-group, comprising of commercial banks and offshore banks and other financial institutions, are obtained through mail questionnaires. The gross output of these establishments, as defined by the 1993 SNA, is estimated as the sum of FISIM (Financial Intermediation Services Indirectly Measured) and their actual service charges (income from dealings in foreign exchange, commissions, ledger fees, etc). The total value of FISIM is measured as total property income receivable minus total interest payable excluding the value of any property income receivable from investment of own fund. The 1993 SNA recommends that the consumption of these services be allocated among users. However, this procedure involves the collection of detailed figures on credits and deposits which are not easily obtained from the banks. Because of practical difficulties of allocating FISIM among the different users, FISIM is recorded as intermediate consumption of nominal industry.

In summary the output of banks is measured as

+ Property income receivable
- Property income from own funds
- Interest payable

= FISIM
+ Fees and commission explicitly charged

The Central Bank is not considered to produce FISIM. Its output is measured as the sum of production costs and is also recorded as intermediate consumption of commercial banks.

1.11 Real estate, renting and business activities

(i) Sources of data

Census of Economic Activities

Financial Services Commission

Board of Investment

Special enquiries from real estate agencies, architects and engineers, firms, advertising agencies and auditing firms.

Annual Survey of large establishments

(ii) Methodology

Real estate and renting

This group comprises the actual and imputed rent of owner occupied dwellings as well as activities of agencies involved in sale of property.

The stock of dwellings distributed by size and region is obtained from the 2000 Housing and Population Census. These benchmark data are updated, using the number of building permits issued every year by the local authorities and the Ministry of Public Infrastructure. Information on rent paid by size for dwellings is obtained from the quarterly Rent Survey conducted by this office. These rents are applied to the total number of residential buildings and the current market value of the existing stock of dwellings is thus computed. To this imputed rent, the actual rent paid in respect of non-residential buildings is added. Data on rent paid is obtained indirectly from the Income Tax statistics and returns of establishments surveyed by this office. The total gives the gross output of activities classified in 'Real estate'. The intermediate cost, which consists mainly of expenditure on repairs and maintenance, is estimated as a percentage of the gross output (obtained from benchmark data available from the 2002 Census of Economic Activities).

Business services

The activities of this sector are broadly classified into 3 main components

- (a) activities of business enterprises, such as consultancy, engineering firms, advertising agencies, computer firms, accounting firms and other services such as car and machine rental and photographic activities,
- (b) activities of own-account professional workers such as lawyers, accountants, notaries, surveyors, etc,
- (c) business activities carried out in the offshore sector.

For the first category, the large contributors to output are interviewed by mail questionnaires annually and estimates are made for the non-respondents and small firms using benchmark data collected through the 2002 Census of Economic Activities.

For the second category, the income approach is used to estimate value added which consists of compensation of employees and operating surplus. The estimates are based on working ratios obtained from the 2002 Census of Economic Activities and leading indicators on employment and registration of professionals from their respective associations.

The third category comprises the activities of business enterprises registered with the Financial Services Commission (FSC) and Board of Investment (BOI). Currently, C.S.O does not survey offshore companies. However, their accounts which are filed at the F.S.C cannot be made available to C.S.O due to confidentiality and secrecy provisions in the Financial Services Development Act. For management companies, "profit before tax" data published in the Annual Report of F.S.C is being used as an alternative of value added.

1.12 General Government

The general government sector subdivided into central government and local government consists of all government units and all non-market Non Profit Institutions that are controlled and mainly financed by government units.

The central government is generally composed of ministries/departments, National Pension Fund and units (Extra Budgetary Units) operating under the authority of the central government with a separate legal identity and enough authority to form additional government units

The local government consists of municipalities and district councils, mainly financed by the central government.

The main functions of government are to assume responsibility for the provision of services to the community as a whole (collective services) as well as certain individual services (e.g. education and health). Government units are normally engaged in the production of non-market goods and services.

Total output, valued as the sum of production costs is estimated as follows:

Gross output = Intermediate Consumption
+ Compensation of employees
+ Consumption of fixed capital

The government accounts are prepared by the Accountant General's Department. The expenditure items in the recurrent budget are carefully scrutinised and classified in categories such as compensation of employees, intermediate consumption, capital expenditure, transfers, etc. Likewise, items of expenditure in the capital budget are examined and classified under capital formation, intermediate consumption, capital transfer, etc. For other units, data are extracted from their financial accounts.

All units forming part of general government are classified according to ISIC groups. The main ISIC group is 'Public Administration and Defence, Compulsory Social Security' which consists of the executive and legislative administration directly dependent on head of state and Parliament together with all other central and local government bodies, the regulation of the activities of agencies that provide health care, education, cultural services and the provision of services to the community as a whole (foreign affairs, defence, public order and compulsory social security activities).

Activities other than administration are classified in their appropriate ISIC groups e.g. education activities are classified under Education, human health activities are classified under Health, agricultural activities under Agriculture.

1.13 Education

(i) Data Sources

Financial Report of the Accountant General's Department
Education statistics from the statistics division of the Ministry of Education
Register of licence holders
Annual Survey of Employment and Earnings
Household Budget Surveys

Housing and Population Census
Census of Economic Activities
Annual survey of large establishments

(ii) Methodology

Education services are provided both by the public and private sector.

The Accountant General's Department provides data on the revenue and expenditure incurred by the Ministry of Education & Human Resources. This is extensively used to estimate output of educational activities in the public sector (Government preprimary, primary and secondary schools). Value added is then measured at cost (intermediate consumption, compensation of employees and consumption of fixed capital).

Output for the private secondary institutions is estimated on the basis of returns available at the Private Secondary School Authority. Benchmark ratios worked out from the 2002 Census of Economic Activities, supplemented with data on enrolment (from the Ministry of Education) and the CPI sub-index for education are used to estimate output in the private preprimary, primary and other private educational institutions.

1.14 Health and social work

(i) Data Sources

Financial Report of the Accountant General's Department
Health statistics from the Ministry of Health & Quality of Life
Register of licence holders
Annual Survey of Employment and Earnings
Household Budget Surveys
Housing and Population Census
Census of Economic Activities
Annual survey of large establishments

(ii) Methodology

Like education services, public health services are provided both by public and private sectors.

Output of public health services are measured at cost from data available at the Accountant General's Department.

For private health services, a number of sources are tapped to obtain relevant data and leading indicators (register of license holders, Associations of dentists and doctors, employment data from the Survey of Employment and earnings etc.). Benchmark data from the Household Budget Survey and the 2002 Census of Economic Activities are also extensively used.

Annual estimates for private doctors and dentists are calculated using the number of persons offering private medical services and the average price charged per patient.

Health services provided by private clinics, private laboratories, physiotherapy, veterinary and welfare institutions are obtained by mail questionnaires.

1.15 Other community, social and personal service activities and private households with employed persons

(i) Data Sources

Register of licence holders
Register of pools and lottery organisations
Annual Survey of Employment and Earnings
Household Budget Surveys
Housing and Population Census
Census of Economic Activities
Mauritius Revenue Authority (MRA)
Survey of large establishments

(ii) Methodology

This section, consisting of services not covered by the activity groups above, deals mainly with community, social and personal services. The main services included are sanitary services, activities of religious organisations, recreational, cultural and sporting activities and other service activities such as laundry, hairdressing and beauty parlour, funeral and domestic services.

Income and expenditure data from the MRA is used to measure output for entertainment activities provided by casinos and clubs, pools and lottery and bookmakers which account for the major part of this subgroup.

Data is collected annually through mail questionnaires for establishments which keep proper records and where the information can be readily obtained. For these enterprises, the production approach is used to measure output. Among these are the Mauritius Broadcasting Corporation and some large establishments engaged in laundry services, sporting and cultural activities.

For the other enterprises which are mostly 'small', output is measured indirectly either by the income approach or the production approach. The estimation is based on indicators such as licenses issued by local authorities, employment figures from the Survey of Employment and Earnings and from benchmark censuses and surveys such as 2000 Housing and Population Census and the 2002 Census of Economic Activities.

2. Gross National Income and its appropriation

Value added at market prices comprises compensation of employees, operating surplus, the consumption of fixed capital and the excess of taxes on production and imports over subsidies. Operating surplus is termed 'gross' because it includes the element of consumption of fixed capital.

Compensation of employees comprises all payments made by producers as wages and salaries, including payments in kind as well as in cash, and of contribution to Social Security and Pension Funds.

Data on compensation of employees are readily available from questionnaires sent to enterprises. Value added is thus computed by the income approach. When the Production approach is used to calculate value added, data on compensation of employees are readily available from the questionnaires. Whenever the income approach is used, the number of persons employed is first obtained. The main sources are the surveys of employment and earnings, the National Pension Scheme and the Population Census data.

Appropriate wage rates are then applied to the employment data to obtain estimates of compensation of employees.

3. Gross Domestic Fixed Capital Formation

Gross Domestic Fixed Capital Formation (GDFCF) is one of the main aggregates of expenditure on the Gross Domestic Product. It consists of the value of durable goods intended for non-military purposes

acquired by resident producer units and meant to be used for a period of more than one year.

Capital formation of industries corresponds to the net additions to their fixed assets, whereas for households only expenditure on construction of dwellings is included. Household expenditure on durable goods such as cars, refrigerators, washing machines, etc., is treated as final consumption although the acquisition of similar goods by industries or government is considered as capital goods.

(i) Methodology

Different methods are used for the valuation of capital formation, based essentially on the commodity approach. Information on investment are collected and compiled on a calendar year basis. These data are classified by type of capital goods such as residential buildings, transport equipment, machinery and equipment, and by industrial use as shown in the Table 2.12.

Building and construction

The main data source used to compile investment in buildings is the local authorities which provide to this office statistics on issues of building permits for new buildings, additions and reconstructions. These permits are classified according to type of buildings (residential and non-residential), size of buildings (in terms of floor area) and region. The value of building construction works are thereafter estimated by using estimates of floor areas and cost per square metre obtained from a sample of small contractors. These costs varied according to type, size and location of buildings.

In the public sector, investment on residential buildings are obtained from the National Housing Development Company (NHDC), while the financial reports provide estimates on capital expenditure incurred in the construction of non-residential buildings. Costs of large construction projects are estimated from data obtained from questionnaires sent to 'large' contractors, sugar estates and parastatal bodies.

Other construction works

All other construction works not included above are grouped under "Other construction works". These include outlays on road constructions, dams, reservoirs, pipe laying, electricity distribution networks, land improvement and reclamation and all other civil engineering works. Information on such construction works is obtained from questionnaires sent to the bodies concerned.

Machinery and Equipment

Machinery and equipment accounted for 32.6 % of the GDFCF in 2008. As most of the machines are imported, external trade statistics is the main source of data. A list of imported machinery and equipment, identified as capital goods, is prepared. These imported goods are obtained at c.i.f. value and are brought to purchasers' prices by the addition of taxes on imports, landing cost, transportation cost, wholesale and retail margins and in some cases, installation cost. They are then classified by industrial use based on information collected from parastatal bodies, sugar estates and imports of the export processing enterprises.

Machinery and equipment imported by government are also obtained from external trade statistics. These are however supplemented with expenditure data from the financial reports.

Establishments producing machinery and equipment are also surveyed and their gross output provides data on investment in local machinery and equipment.

Data used in the computation of estimates on capital formation are obtained from many sources. In order to avoid double counting, the data are thoroughly scrutinised at the compilation stage.

4. Estimates of growth rates

(i) *Double-deflation method*

The value added of an industry is a residual obtained after subtracting its intermediate consumption from its gross output. Therefore, to obtain the value added at previous year's prices, both the gross output and the input of goods and services should be revalued at previous year's prices. This method, the ideal one, is known as the "double-deflation" method. However, this method requires extensive data on both inputs and outputs which, in practice are very difficult to obtain. Therefore, other methods using 'proxy indicators' are used to indicate volume changes. The proxy indicators most often used are:

- Physical quantities of goods produced
- Physical quantities of materials used
- Employment

As most industries produce a large number of heterogeneous products it is not possible to obtain separate physical output or input series. The value series are most often deflated by an appropriate price index to obtain the growth rates. The indices normally used are:

- Producer Price Index (PPI)
- Consumer Price Index (CPI)
- Construction Price Index
- Wage/Salary Index
- Import and Export Price Index

A brief description of the methodology used to derive growth rates are given below:

<u>Industry Group</u>	<u>Method used</u>
Agriculture, hunting, forestry and fishing:	
<i>Sugar and tea</i>	<i>Double deflation method</i>
<i>Other</i>	<i>Use of quantity relatives</i>
Manufacturing:	
<i>Sugar and black tea</i>	<i>Double deflation method</i>
<i>E.P.Z. / E.O.E</i>	<i>Deflation by specific price indices such as the Export price index</i>
<i>Other</i>	<i>(i) Quantity relatives for homogeneous products</i> <i>(ii) Deflation by specific price indices for product groups (e.g. PPI)</i>
Electricity, gas and water supply	Volume indicator: Units of electricity sold and volume of water sold
Construction	Building permits statistics and construction price index
Wholesale and retail trade	Deflation by a weighted index of the Consumer Price Index and Import Price Index
Hotels and restaurants	Use of tourist nights/arrival series
Transport, storage and communications	<i>(i) Deflation by a price index of bus fares, taxi fares or a retail price index of fuel</i> <i>(ii) Deflation by a salary index or extrapolation using an index based on registration of vehicles</i>
Financial intermediation	<i>(i) Deflation by a weighted bank interest rate index and Consumer Price Index</i> <i>(ii) Use of employment data and number of insurance policies</i>
Real estate, renting and business activities	Use of employment data
Public administration and defence	<i>(i) Deflation by a salary index</i> <i>(ii) Use of employment data</i>
Education, health and other services	Use of employment data

(ii) ***Expenditure approach***

The methods used for the estimation of growth rates for GDP by type of expenditure are as follows:

<u>Type of expenditure</u>	<u>Method used</u>
Private consumption expenditure	The Consumer Price Index adjusted for coverage
Government consumption expenditure	Deflation by a weighted index of salary and Consumer Price Index
Capital formation:	
(a) Buildings, construction	Building permits statistics and Construction Price Index
(b) Machinery and other equipment	Deflation by the price index of imported capital goods
Exports and imports of goods and services	Deflation by the export and import price indices
Taxes on production and imports:	
(a) for taxes on production such as excise duty	Quantity relatives based on production data
(b) for other taxes e.g. import duties and Value Added Tax	A price index based on increase in the rates of the specific duties or the GDP deflator

Section 2 - STATISTICAL ANALYSIS

1. Year 2008

1.1 Gross Domestic Product (GDP)

In 2008, GDP at basic prices increased by 12.9% in nominal terms to reach R 233688 from R 206,971 million in 2007. After removing the price effect of 7.4% (the GDP deflator), the economy grew by 5.1%, lower than the 5.5% recorded in 2007. Exclusive of sugar, the rate works out to 5.2% compared to 6.3% in 2007 (Tables 2.3 and 2.5).

GDP at market prices, which includes R 31,201 million as taxes (net of subsidies) on products, increased by 12.5% to R 264,889 million from R 235,520 million in 2007. Per capita GDP at current market prices increased by 11.7% to R 208,763 from R 186,818 in 2007 (Table 2.1).

1.2 Growth rate by industry

In 2008, more than two thirds (66.4%) of GDP was generated by the tertiary sector comprising the services industries compared to slightly over a quarter (29.0%) by the secondary sector. The remainder or 4.5% was attributable to the primary sector which consists mainly of agricultural activities (Table 2.3).

GDP growth was positively influenced by the secondary and tertiary sectors which contributed 1.4 and 3.7 percentage points respectively to the overall GDP growth. The contribution of the primary sector was marginal (Table 2.6).

Primary sector

Activities in the primary sector which are mainly related to **Agriculture** grew by 1.5% in 2008 after a decline of 5.3% in 2007. Within the sector

- **Agriculture** grew by 1.5%, as a result of growths of 3.7% and -0.4% in "Sugarcane" and "Other agriculture" respectively
- No growth was registered in **Mining and quarrying** in 2008 compared to a decline of 9.1% in 2007.

Secondary sector

Activities in the secondary sector grew by 5.0% in 2008, same as in 2007. Within the sector,

- **Manufacturing** grew by 3.2% in 2008 compared to 2.2% in 2007. The performances of its sub sectors were as follows:

Sugar milling a growth of 3.7% in 2008 based on a sugar production of 452,062 tonnes, compared to a decline of 13.6% in 2007 based on a production of 435,972 tonnes.

Food a growth of 7.5% compared to 4.0% in 2007.

Textile no growth in 2008 compared to 8.5% registered in 2007.

Activities of export oriented enterprises (EOE) grew by 3.6% in 2008 lower than the growth of 8.0% in 2007.

- **Electricity, gas and water supply** grew by 4.0% higher than the 3.4% growth in 2007. After a growth of 15.2% in 2007, **Construction** grew further by 11.1%, mainly attributable to the construction of commercial and office buildings, hotels and projects under the Integrated Resort Scheme

Tertiary sector

The tertiary sector grew by 5.7% in 2008, lower than the 6.7% growth in 2007

- **Wholesale and retail trade; repair of motor vehicles, motor cycles, personal and household goods** grew by 4.6%, slightly higher than the 4.5% growth recorded in 2007.
- **Hotels and restaurants** grew by 2.7%, lower than the growth of 14.0% in 2007. This is based on 930,456 tourist arrivals in 2008 compared to 906,971 in 2007. Tourist earnings were estimated at R 41,213 million compared to R 40,687 million in 2007.
- **Transport, storage and communications** grew by 6.0%, lower than the 7.7% growth in 2007.
- **Financial intermediation** grew by 10.1%, higher than the 7.5% growth in 2007. The 10.1% growth was due to growths of 5.0%, 12.9% and 7.0% in insurance, banks and other financial intermediation activities respectively.
- **Real estate, renting and business activities** grew by 7.6% same as in 2007.
- Activities of **Public administration and defence; compulsory social security** registered a growth of 1.7% higher than the 0.5% growth in 2007.
- **Education**, which includes services provided by both public and private operators, grew by 3.4% in 2008, higher than the 2.5% growth in 2007.
- **Health and social work** grew by 4.6% same as in 2007.
- **Other community, social and personal service activities and private households with employed persons** grew by 8.3% in 2008, slightly higher than the 8.0% growth registered in 2007.
- **Financial Intermediation Services Indirectly Measured (FISIM)** grew by 10.4% compared to 7.5% in 2007.

1.3 Expenditure on Gross Domestic Product

1.3.1 Final consumption expenditure

Total final consumption expenditure increased by 18.1% to reach R 232,127 million in 2008 from R 196,533 million in 2007. The real growth rate worked out to 6.1% compared to 3.9% in 2007 as a result of a higher growth in the final consumption expenditure of households and in that of general government (Tables 2.9 and 2.10). Final consumption expenditure of households which represents 84.8% of the total grew by 7.0% compared to 4.5% in 2007 and that of general government grew by 1.4% compared to 0.8% in 2007.

1.3.2 Investment (GDFCF)

Investment in 2008 reached R 65,176 million compared to R 59,170 million in 2007, representing a nominal increase of 10.2% (Table 10). After removing the price effect estimated at 6.0%, investment in real terms grew by 3.9% in 2008, lower than the high growth of 8.6% registered in 2007. Exclusive of the acquisition of aircraft and marine vessel, the growth rate worked out to 7.5% compared to 17.0% in 2007 (Table 2.13).

Investment rate, measured by the ratio of investment to GDP at market prices worked out to 24.6% in 2008, lower than the 2007 figure of 25.1% (Table 2.2).

Exclusive of aircraft and marine vessel, the rate for 2008 worked out to 24.4% compared to 24.1% for 2007.

Investment by type

“Building and construction work” continued to grow at a high rate of 13.9% in 2008, though lower than the growth of 16.9% registered in 2007. The 13.9% growth was due to growths of 19.3%, 12.7% and 8.6% in “Residential building”, “Non-residential building” and “Other construction work” respectively.

Investment in "Machinery and equipment" declined by 10.4% in 2008 after a slight decrease of 1.0%

in 2007. This is mainly explained by lower investment in machinery and equipment including aircraft by the public sector in 2008. Excluding investment on aircraft and marine vessel, the growth rate worked out to - 2.8% in 2008 compared to 17.2% in 2007 (Tables 2.12 & 2.13).

Investment by sector

Private sector investment in 2008 was estimated at R 54,011 million representing a nominal increase of 16.8% over the 2007 figure of R 46,261 million. In real terms, it grew by 10.0% compared to 24.0% in 2007. The 10.0% growth is mostly attributable to investment in commercial and office buildings, hotels and IRS projects.

Public sector investment decreased by 13.5% in nominal terms to R 11,165 million in 2008 from R 12,909 million in 2007. In real terms, it fell by 17.9% in 2008 compared to a decline of 24.7% in 2007, mainly as a result of lower investment in machinery and equipment (including aircraft) and in infrastructure projects. However, excluding aircraft and marine vessel, the real growth of public sector investment was 1.9% in 2008 compared to a decline of 7.4% in 2007.

The share of private sector investment increased to 82.9% in 2008 from 78.2% in 2007 and that of the public sector decreased to 17.1% from 21.8%. Excluding the acquisition and sale of aircraft and marine vessel, the share of private sector investment was 82.7% and that of the public sector 17.3% compared to 82.0% and 18.0% respectively in 2007 (Table 2.2).

1.3.3 Imports and exports of goods and services

Imports of goods and services for 2008 amounted to R 179,108 million compared to R 162,612 million in 2007, representing an increase of 10.1% in nominal terms mostly explained by higher import prices of food and petroleum products (Tab 2.9).

In real terms, imports of goods and services grew by 1.8% in 2008 compared to 2.0% in 2007. Imports of goods measured on an f.o.b. basis grew by 1.3% as opposed to a decline of 1.2% in 2007, while imports of services which include insurance and freight paid in respect of imported goods, grew by 2.9% compared to 10.4% in 2007 (Table 2.10).

Exports of goods and services increased by 1.2% to R 140,166 million in 2008 from R 138,459 million in 2007. In real terms, this represents a growth of 2.3%. Exports of goods measured on an f.o.b. basis grew by 1.9% in 2008 as opposed to a decline of 10.6% in 2007, mostly as a result of higher volume of exports of fish products and other manufactured goods except textiles and wearing apparel. Exports of services registered a low growth of 2.6% compared to 23.0% in 2007, mainly due to a low growth in tourist earnings in 2008 (Tables 2.9 and 2.10).

Net exports of goods and services resulted in a deficit of R 38,942 million in 2008, higher than the deficit of R 24,153 million registered in 2007. This represents 14.7% of GDP at market prices in 2008 compared to 10.3% in 2007 (Tables 2.1 and 2.2).

Exclusive of aircraft and marine vessel, the deficit worked out to R 38,342 million, representing 14.5% of GDP at market prices, compared to R 21,638 million or 9.2% of GDP in 2007.

1.4 GDP at market prices by category of income

In 2008, the share of the three components of GDP at market prices was as follows:

Compensation of employees	36.0%
Taxes net of subsidies on production and imports	12.7%
Gross operating surplus	51.3%

Compensation of employees reached R 95,363 million in 2008, representing a nominal increase of 14.2% over the R 83,522 million estimated in 2007. Gross operating surplus which accounted for around half

of GDP at market prices increased by 12.2% to R 136,201 million in 2008 from R 121,342 million in 2007 while taxes (net of subsidies) on production and imports increased by 9.7% to R 33,635 million from R 30,656 million (Table 2.8).

1.5 Gross National Disposable Income and Saving

Gross National Disposable Income (GNDI), which in addition to GDP at market prices takes into account flows of primary income comprising mostly interests and dividends (+ R 4,900 million) and transfers (+ R 6,409 million) from and to the rest of the world, is estimated at R 276,508 million in 2008.

Out of the R 276,508 million available, R 232,127 million or 83.9% were spent as final consumption by households and general government. The remaining R 44,381 million or 16.1% constituted the Gross National Saving (GNS).

The saving rate as measured by the ratio of Gross National Saving to GDP at market prices decreased to 16.7% in 2008 from 21.21% in 2007 (Table 2.8).

2. Year 2009

2.1 Gross Domestic Product, (GDP)

In 2009, GDP at basic prices increased by 4.4% in nominal terms to reach R 244,080 million from R 233,688 million in 2008. After removing the price effect estimated at 1.3% (the GDP deflator), the economy grew by 3.1%, lower than the 5.1% recorded in 2008. Exclusive of sugar, the growth rate worked out to 2.8% compared to 5.2% in 2008 (Tables 2.3 and 2.5).

GDP at market prices, which includes R 30,739 million as taxes (net of subsidies) on products, increased by 3.7% to R 274,819 million from R 264,889 million in 2008. Per capita GDP at current market prices increased by 3.0% to R 215,063 from R 208,763 in 2008 (Table 2.1).

2.2 Growth rate by industry

In 2009, 68.8% of GDP was generated by the tertiary sector comprising the services industries compared to 27.2% by the secondary sector. The remainder, or 4.0%, was attributable to the primary sector which consists mainly of agricultural activities (Table 2.3).

GDP growth was positively influenced by the secondary and tertiary sectors which contributed 0.8 and 1.8 percentage points respectively to the overall GDP growth. On the other hand, the contribution of the primary sector was 0.5 percentage point (Table 2.6).

Primary sector

Activities in the primary sector which are mainly related to "Agriculture" grew by 10.4% in 2009 compared to 1.5% in 2008. Within the sector,

- **Agriculture** grew by 10.6%, as a result of growths of 15.0% and 7.3% in "Sugarcane" and "Other agriculture" respectively.
- **Mining and quarrying** recorded a negative growth of 15.0% in 2009 compared to no growth in 2008

Secondary sector

Activities in the secondary sector grew by 2.5% in 2009 lower than the 5.0% growth in 2008. Within the sector,

- **Manufacturing** grew by 1.1% in 2009 compared to 3.2% in 2008. The performances of its sub sectors were as follows:

Sugar milling a growth of 15.0% in 2009 based on a sugar production of 467,234 tonnes, mostly refined and special sugars, compared to a growth of 3.7% in 2008 based on a production of 452,062 tonnes, mostly raw.

Food a growth of 4.0% compared to 7.5% in 2008.

Textile a negative growth of 2.9% in 2009 compared to no growth registered in 2008.

Other manufacturing no growth in 2009 compared to 2.4% in 2008.

Activities of export oriented enterprises (EOE) grew by 0.5% in 2009 compared to 3.6% in 2008.

- **Electricity, gas and water supply** grew by 2.5% lower than the 4.0% growth in 2008.
- **Construction** grew further by 6.5% after a growth of 11.1% registered in 2008.

Tertiary sector

The tertiary sector grew by 3.1% in 2009, lower than the 5.8% growth in 2008

- **Wholesale and retail trade; repair of motor vehicles, motor cycles, personal and household goods** grew by 1.3%, lower than the 4.6% growth recorded in 2008.
- **Hotels and restaurants** grew by -5.3% compared to a growth of 2.7% in 2008. This is based on 871,356 tourists arrivals in 2009 compared to 930,456 in 2008. Tourist earnings were estimated at R 35,700 million compared to R 41,213 million in 2008.
- **Transport, storage and communications** grew by 5.0%, lower than the 6.0% growth in 2008.
- **Financial intermediation** grew by 4.9%, lower than the 10.8% growth in 2008. The 4.9% growth was due to growths of 4.0%, 5.2% and 5.6% in insurance, banks and other financial intermediation activities respectively.
- **Real estate, renting and business activities** grew by 5.9% compared to 7.6% in 2008.
- Activities of **Public administration and defence; compulsory social security** registered a growth of 2.5% higher than the 1.7% growth in 2008.
- **Education**, which includes services provided by both public and private operators, grew by 1.9% in 2009, lower than the 3.4% growth in 2008.
- **Health and social work** grew by 6.1% higher than the 4.6% registered in 2008.
- **Other community, social and personal service activities and private households with employed persons** grew by 7.9% in 2009, lower than the 8.3% growth registered in 2008.
- **Financial Intermediation Services Indirectly Measured (FISIM)** grew by 5.3% compared to 10.4% in 2008.

2.3 Expenditure on Gross Domestic Product

2.3.1 Final consumption expenditure

Total final consumption expenditure increased by 5.6% to reach R 244,915 million in 2009 from R 231,849 million in 2008. The real growth rate worked out to 2.6% compared to 6.0% in 2008 (Tables 2.9 and 2.10). Final consumption expenditure of households which represents 83.6% of the total grew by 2.1% compared to 7.0% in 2008 and that of general government grew by 5.4% compared to 0.7% in 2008.

2.3.2 Investment (GDFCF)

Investment in 2009 reached R 71,848 million compared to R 65,176 million in 2008, representing a nominal increase of 10.2% (Table 2.9). After removing the price effect estimated at 1.0%, investment in real terms grew by 9.1% in 2009, higher than the 3.6% growth registered in 2008. Exclusive of the acquisition of aircraft and marine vessel, the growth rate worked out to 5.0% compared to 7.2% in 2008 (Table 2.13).

Investment rate, measured by the ratio of investment to GDP at market prices worked out to 26.1% in 2009, higher than the 2008 figure of 24.6% (Table 2.2).

Exclusive of aircraft and marine vessel, the rate for 2009 worked out to 24.9% compared to 24.4% for 2008.

Investment by type

"Building and construction work" grew by 7.6% in 2009, lower than the 13.4% growth registered in 2008. The 7.6% growth was due to growths of 7.8% in "Residential building", -0.8% in "Non-residential building" and 30.8% in "Other construction work". The high increase in "Other construction work" is explained by accelerated implementation of public sector investment projects, particularly during the last quarter of 2009.

Investment in "Machinery and equipment" rebounded by 12.3% in 2009 after a decline of 10.4% in 2008. This is mainly explained by the acquisition of aircraft by the public sector in 2009. Excluding investment on aircraft and marine vessel, the growth rate worked out to -0.5% in 2009 compared to -2.8% in 2008 (Table 2.12 & 2.13).

Investment by sector

Private sector investment in 2009 was estimated at R 53,426 million, representing a nominal decrease of 1.1% over the 2008 figure of R 54,011 million. In real terms, it declined by 2.0% compared to a growth of 9.7% in 2008. The decline in 2009 is mainly due to the completion of major projects such as commercial and office buildings, new hotels and hotel renovation partly offset by some new ones such as RES, residential complexes, IRS, office buildings, and renovation of hotels.

Public sector investment increased by 65.0% in nominal terms to R 18,422 million in 2009 from R 11,165 million in 2008. In real terms, it grew by 62.9% in 2009 compared to a decline of 18.1% in 2008. This high growth is due to the implementation of public sector investment projects (e.g. road infrastructure, renovation of hospitals and schools) and the acquisition of aircraft. Excluding aircraft and marine vessels, the real growth of public sector investment worked out to 33.2% in 2009, compared to 1.7% in 2008.

The share of private sector investment decreased to 74.4% in 2009 from 82.9% in 2008 and that of the public sector increased to 25.6% from 17.1%. Excluding the acquisition of aircraft and marine vessel, the share of private sector investment was 78.1% and that of the public sector 21.9% compared to 82.7% and 17.3% respectively in 2008 (Table 2.2).

2.3.2 Imports and export of goods and services

Imports of goods and services in 2009 amounted to R 162,156 million compared to R 179,108 million in 2008, representing a decrease of 9.5% (Table 2.9).

In real terms, imports of goods and services declined by 4.6% in 2009 compared to a growth of 1.8%

in 2008. Imports of goods measured on an f.o.b. basis grew by -6.1% compared to 1.3% in 2008, mainly due to contractions in imports of raw materials. Imports of services which include insurance and freight paid in respect of imported goods, declined by 1.2% compared to a growth of 2.9% in 2008 (Table 2.10).

Exports of goods and services decreased by 5.1% to R 132,980 million in 2009 from R 140,166 million in 2008. In real terms, this represents a decline of 4.8%. Exports of goods measured on an f.o.b. basis declined by 8.8% in 2009 as opposed to a growth of 1.9% in 2008, mostly as a result of lower volume of exports of textiles and wearing apparel. Exports of services registered a decline of 1.1% compared to a growth of 2.6% in 2008, mainly due to lower tourist earnings as a result of a decrease in the number of tourist arrivals in 2009 (Tables 2.9 and 2.10).

Net exports of goods and services resulted in a deficit of R 29,176 million in 2009, lower than the deficit of R 38,942 million registered in 2008. This represents 10.6% of GDP at market prices in 2009 compared to 14.7% in 2008 (Tables 2.1 and 2.2).

Exclusive of aircraft and marine vessel, the deficit worked out to R 25,776 million, representing 9.4% of GDP at market prices, compared to R 38,342 million or 14.5% of GDP in 2008.

2.4 GDP at market prices by category of income

In 2009, the share of the three components of GDP at market prices was estimated as follows:

Compensation of employees	37.2%
Taxes (net of subsidies) on production and imports	12.0%
Gross operating surplus	50.8%

Compensation of employees reached R 102,264 million in 2009, representing a nominal increase of 7.1% over the R 95,447 million estimated in 2008. Gross operating surplus which accounted for around half of GDP at market prices increased by 2.8% to R 139,587 million in 2009 from R 135,807 million in 2008 while taxes (net of subsidies) on production and imports decreased by 2.0% to R 32,968 million from R 33,635 million (Table 2.8).

2.5 Gross National Disposable Income and Saving

Gross National Disposable Income (GNDI), which in addition to GDP at market prices takes into account flows of primary income comprising mostly interests and dividends (+ R 825 million) and transfers (+ R 6,909 million) from and to the rest of the world, was estimated at R 282,553 million in 2009.

Out of the R 282,553 million available, R 244,915 million or 86.7% were spent as final consumption by households and general government. The remaining R 37,638 million or 13.3% constituted the Gross National Saving (GNS). The saving rate as measured by the ratio of Gross National Saving to GDP at market prices worked out to 13.7% (Table 2.8).

GNDI for 2008 worked out to R 276,198 million, and GNS to R 44,349 million representing 16.1% of GNDI. The saving rate worked out to 16.7%.

SYMBOLS AND ABBREVIATIONS

Symbols

The following symbols are used throughout:

- : Not applicable or nil
- ... : Not available

Abbreviations

- R : Rupees
- R M : Rupees Million
- 000 : Thousand
- M-tons : Metric tons: 1,000 kilos
- H-Litres : Hectolitres: 100 litres
- No. : Number
- E.O.E. : Export Oriented Enterprises
- ISIC : International standard industrial classification of all economic activities
- C.I.F. : Cost, insurance, freight
- F.O.B. : Free on board

Exchange rate

Conversion rate to Special Drawing Rights (S.D.R.):

1 S.D.R.: 7.713759 Mauritian Rupees up to 23rd October, 1979

1 S.D.R.: 10.00 Mauritian Rupees as from 24th October, 1979

1 S.D.R.: 12.00 Mauritian Rupees as from 28th September, 1981.

On the 28th February, 1983, the Mauritian Rupee was delinked from the S.D.R. and linked to a trade-weighted basket of currencies.

Note: As from Quarter 3,2005, "Other Income" includes interest income of banks.

As from Quarter 3, 2006, valuation changes are excluded from foreign assets and liabilities transactions of banks.

As from 2007, banks' foreign assets and liabilities have been derived using the Depository Corporations Survey.

CHAPTER 4

QUARTERLY NATIONAL ACCOUNTS

Section 1 – Sources and Methods

1. Concepts and definitions

The quarterly estimates have been compiled according to guidelines provided in the IMF manual entitled “Quarterly National Accounts Manual – Concepts, Data sources and Compilation”, which is itself based on the System of National Accounts 1993 (SNA 93) of the United Nations and are therefore consistent with annual estimates of the National Accounts.

2. Sources of data

The objective of the Quarterly National Accounts (QNA) is to provide the best indication of quarterly movements. Indicators for QNA have therefore been chosen according to their ability to capture the movements in the performance of the various sectors.

The main sources of data for compiling QNA estimates include quarterly production accounts of various organisations, quarterly surveys on income and expenditure among enterprises considered as drivers in specific sectors, quarterly quantity produced, quarterly expenditure of Government from the Accountant General Department, quarterly data from administrative sources such as building permits from local government, foreign trade data from the Customs Department, turnover data from the VAT systems, as well as some indirect indicators such as employment.

3. Methods used

When data on both output and input are available, the quarterly value added estimates are computed as the difference between the output and the intermediate consumption (inputs consumed in the process). When the quarterly output only is readily available or is compiled on the basis of quarterly data on quantity produced, the value added is computed using the production structure of the industry obtained at the latest Census of Economic Activities or from the latest annual production accounts available. When indicators on quarterly volume produced and price only are available, these are applied to the last quarterly value added figures to have the estimates for the quarter under review.

Constant price estimates take account of effects of prices and provide real growths. The constant price estimates are computed using the double deflation method for sectors where information on both inputs and outputs is available. In practice such data are difficult to obtain, hence ‘proxy indicators’ of volume changes are used if available, otherwise value series are deflated by an appropriate price index.

More details on the data sources and methods used for the different sectors are given in the table at section 5.

4. Seasonal adjusted quarterly GDP

The Central Statistics Office (CSO) of Mauritius has decided to increase its current outlay of statistical tables on National Accounts with the presentation of seasonally adjusted time series of quarterly national accounts estimates. However, at present only seasonally adjusted figures of value added by sector and total GDP are available. The methodology adopted in the seasonal adjustment exercise is briefly given below. Seasonally adjusted time series has historically been a common practice in analyzing business cycles. Currently this is widely used by a majority of statistical offices, central banks and policy analysts to describe and understand the most recent economic developments.

4.1 Procedures for seasonal adjustment of quarterly GDP

QNA data are subject to seasonal variations which are recurrent within a year pattern. For example, activities of “Wholesale and retail trade” are usually lowest in the first quarters, but highest in the fourth quarters in line with the high demand for consumption goods at the end of the year; activities of “Hotels and restaurants” are highest in the first and last quarters in line with high tourist arrivals during these quarters. For meaningful comparison of quarter to quarter growth, particularly for identifying turning points, the seasonal component must be removed from the data.

The procedures for carrying out the seasonal adjustment exercise are as follows:

- (i) The software, Demetra, developed by Eurostat and which includes the X-12 program has been used.
- (ii) Forward adjustment, instead of concurrent adjustment, has been used for quarterly series up to the most recently completed year, that is seasonal factors for the four quarters ahead are estimated using the X-12 procedure. When a new data point becomes available, the seasonally adjusted value of the new data point is obtained by dividing it by the appropriate forward factor if model is multiplicative or subtracting from it the appropriate forward factor if the underlying model is additive.
- (iii) The seasonal adjustment exercise has been reworked using data up to 2008. In the light of the new seasonal factors, the seasonally adjusted growth rates for year 2008 that were computed using forecast factors based on 2000 to 2007 data have been revised and are given in Table B.
- (iv) Indirect adjustment, that is seasonally adjusted GDP obtained by summation of seasonally adjusted components of GDP, has been used for the aggregate GDP.
- (v) Adjustments have been made so that the sums of quarterly seasonally adjusted data are equal to the original yearly totals.

It should be noted that different seasonal adjustment methods, no matter how carefully they have been implemented, do not always yield identical results if applied to the same time series. In addition, even if the same seasonal adjustment method is applied, there may be substantial revisions, particular towards the end of the time series, when new data are included in the calculation and taking account of possible shifts in the seasonal movements. Consequently, seasonally adjusted data remain provisional for longer than unadjusted figures, which are also subject to revisions.

5. Data sources, methods and indicators used for the estimation of quarterly GDP

The table below gives the data sources and methods used for the estimation of quarterly GDP estimates at current and constant prices by both the production and expenditure approaches.

Production approach

Industry group	Data sources	Methods	Indicator - constant price estimates
A. Agriculture, Hunting & Forestry			
Sugar Cane	<ul style="list-style-type: none"> - Annual production and price of sugar. - Final annual production accounts. - Survey of sugar factories to have the quarterly cost structure. 	<ul style="list-style-type: none"> - Final estimates: Based on the final annual production accounts. Annual gross output and intermediate consumption are allocated to quarters according to cost structure of cane growing furnished by surveyed sugar factories. The value added is thereafter derived. - Preliminary estimates: value added for the year based on expected production and price of sugar is quarterlised using the latest value added structure. Revision is made when final accounts are available about two years later. 	<ul style="list-style-type: none"> - Final estimates: deflation of the four quarterly estimates of the year by the price deflator of the annual estimate. - Preliminary estimates: deflation of the four quarterly estimates of the year by the price of sugar for the year.
Tea and Tobacco	<ul style="list-style-type: none"> - Quarterly production and prices of tea from Tea Board. - Quarterly production and prices of tobacco leaves from Tobacco Board. 	<ul style="list-style-type: none"> - Gross output based on quarterly production and prices. - Value added based on annual production structure. 	<ul style="list-style-type: none"> - Deflation by component of Quarterly Producer Price Index-Agriculture (PPI-A).
Food crops	<ul style="list-style-type: none"> - Monthly quantities of food crops from Agricultural Research and Extension Unit (AREU). - Retail prices through the monthly consumer price surveys. 	<ul style="list-style-type: none"> - Value added based on quarterly quantities of food crops produced and producers' price obtained from retail prices adjusted for transport and trade margins. 	<ul style="list-style-type: none"> - Deflation by quarterly changes in the estimated producers' price based on retail prices.
Flowers and Fruits	<ul style="list-style-type: none"> - Quarterly exports of flowers from Trade Statistics supplemented by an estimate for local sales. - Monthly production of some fruits from AREU. - Quarterly production of other fruits based on the "1985 Survey of fruit trees in backyard" supplemented with data from other sources. 	<ul style="list-style-type: none"> - Value added based on quarterly sales/quantities produced and PPI-A component/producers' price obtained from retail prices adjusted for transport and trade margins. 	<ul style="list-style-type: none"> - Deflation by components of quarterly PPI-A/quarterly changes in the estimated producers' price based on retail prices.

Industry group	Data sources	Methods	Indicator - constant price estimates
Livestock, Poultry and Related Products	<ul style="list-style-type: none"> - Quarterly production of poultry from main breeders. - Monthly quantity of livestock slaughtered from the Mauritius Meat Authority (MMA) adjusted for illegal slaughtering. - Retail prices. 	<ul style="list-style-type: none"> - Value added based on quarterly quantities produced and on producers' price obtained from retail prices adjusted for transport and trade margins. 	<ul style="list-style-type: none"> - Deflation by quarterly changes in the estimated producers' price based on retail prices.
Government Services	<ul style="list-style-type: none"> - Expenditure of Central Government from the Accountant General Department. 	<ul style="list-style-type: none"> - Value added is estimated at cost, that is, it is equal to compensation of employees and consumption of fixed capital. 	<ul style="list-style-type: none"> - Deflation using a weighted index made up of quarterly wage rate index based on salary compensation, construction price index, price of transport equipment and machinery component of import price index.
B. Fishing			
Fishing	<ul style="list-style-type: none"> - Quarterly quantities of fish caught from the Albion Fisheries Research Centre (AFRC) Retail prices. 	<ul style="list-style-type: none"> - Value added based on quarterly quantities of fish caught and producers' price obtained from retail prices adjusted for trade margins. 	<ul style="list-style-type: none"> - Deflation by quarterly changes in the estimated producers' price based on retail prices.
C. Mining & Quarrying			
Mining & Quarrying	<ul style="list-style-type: none"> - Quarterly quantities of salt produced and sand extracted, and their prices through surveys of establishments. 	<ul style="list-style-type: none"> - Value added derived using data collected from quarterly surveys 	<ul style="list-style-type: none"> - Deflation by change in producer prices.
	<ul style="list-style-type: none"> - Annual production accounts of decorative rocks through survey of establishments. 	<ul style="list-style-type: none"> - Annual estimates of value added evenly distributed over the 4 quarters. 	<ul style="list-style-type: none"> - Deflation by wage increase due to salary compensation of July of every year.

Industry group	Data sources	Methods	Indicator - constant price estimates
D. Manufacturing			
Sugar Milling	<ul style="list-style-type: none"> - Annual production and price of sugar. - Final annual production accounts. - Survey of sugar factories to have the quarterly cost structure. 	<ul style="list-style-type: none"> - Final estimates: Based on the final annual production accounts; Annual gross output and intermediate consumption are allocated to quarters according to cost structure of sugar milling activities furnished by surveyed sugar factories. The value added is thereafter derived. - Preliminary estimates: value added for the year based on expected production and price of sugar is quarterlised using the last quarterly value added structure. Revision is made when final accounts are available about two years later. 	<ul style="list-style-type: none"> - Final estimates: deflation of the four quarterly estimates of the year by the price deflator of the annual estimate. - Preliminary estimates: deflation of the four quarterly estimates of the year by the price of sugar for the year.
EPZ	<ul style="list-style-type: none"> - Quarterly exports from Trade statistics. - Quarterly turnover from the Value Added Tax (VAT) Department and the Large Taxpayers' Department (LTD). - Level of stock from quarterly stock surveys. 	<ul style="list-style-type: none"> - Quarterly value added based on quarterly gross output compiled from these sources and last annual technical ratio. 	<ul style="list-style-type: none"> - Volume index from Quarterly Index of Industrial Production (QIIP).
Non – EPZ	<ul style="list-style-type: none"> - Quarterly exports from Trade Statistics - Quarterly turnover from the VAT and LTD Departments - Production of excisable goods from Customs and Excise Department - Level of stock from quarterly stock surveys 	<ul style="list-style-type: none"> - “Large” establishments (those with 10 persons or more engaged): Quarterly value added estimates based on quarterly gross output compiled from these sources and last annual technical ratio. - Small establishments: Quarterly value added estimates based on the same quarterly trends as “Large establishments” 	<ul style="list-style-type: none"> - Volume index based on Quarterly Index of Industrial Production (QIIP) adjusted for small establishments.
E. Electricity, Gas & Water Supply			
Electricity, Gas & Water Supply	<ul style="list-style-type: none"> - Quarterly production accounts from Central Electricity Board (CEB) and Central Water Authority (CWA) 	<ul style="list-style-type: none"> - Value added compiled from quarterly accounts. 	<ul style="list-style-type: none"> - Volume based on quarterly quantity of electricity and water sold.
	<ul style="list-style-type: none"> - Quarterly production data of the Independent Power Producers 	<ul style="list-style-type: none"> - Value added derived from the value of electricity purchased by CEB and quarterly technical ratio of the previous year. 	

Industry group	Data sources	Methods	Indicator - constant price estimates
F. Construction			
Construction	<ul style="list-style-type: none"> - Monthly building permits from Municipalities and District Councils - Quarterly capital expenditure estimates of General Government from Accountant General Department - Maintenance expenditure by Government based on quarterly output of the Ministry of Public Infrastructure from Accountant General Department - Maintenance expenditure by households from latest Household Budget Survey 	<ul style="list-style-type: none"> - Quarterly output based on these sources and quarterly value added derived using the production structure obtained at the 2002 CEA. 	<ul style="list-style-type: none"> - Deflation by quarterly Construction Price Index.
G. Wholesale & Retail Trade, Repair of Motor Vehicles, Motorcycles, Personal & Household Goods			
Wholesale & Retail Trade	<ul style="list-style-type: none"> - Quarterly imports from Trade statistics - Local production from Agriculture statistics and Industrial statistics 	<ul style="list-style-type: none"> - For imported goods, gross output based on trade margins computed from quarterly imports. For local production, gross output based on trends of production of food crops and production of the non-EPZ sector. - Value added derived using the production structure obtained at the 2002 CEA. 	<ul style="list-style-type: none"> - Deflation by CPI.
Repair Services		Annual estimates divided by 4.	- Deflation by CPI.
H. Hotels & Restaurants			
Hotels & Restaurants	<ul style="list-style-type: none"> - Quarterly tourist arrivals from Tourism statistics - Quarterly tourist earnings from Bank of Mauritius - Expenditure on food and accommodation by tourists from Survey of tourist expenditure 	<ul style="list-style-type: none"> - Gross output based on quarterly estimates of expenditure on food and accommodation derived from quarterly tourist earnings and pattern of expenditure of tourists. - Value added is estimated using the production structure obtained from latest available annual production accounts. 	<ul style="list-style-type: none"> - Volume based on quarterly tourist arrivals.

Industry group	Data sources	Methods	Indicator - constant price estimates
I. Transport, Storage & Communication			
Land Transport			
Bus	<ul style="list-style-type: none"> - Quarterly production accounts of bus companies from National Transport Authority (NTA) 	<ul style="list-style-type: none"> - Value added compiled from quarterly accounts 	<ul style="list-style-type: none"> - Double deflation using bus fare for output and relevant CPI components for inputs.
Taxi	<ul style="list-style-type: none"> - Quarterly licences of taxi cars from NTA - Taxi fares from monthly consumer price surveys. 	<ul style="list-style-type: none"> - Output based on the quarterly number of licences delivered and taxi fare. - Value added derived using the production structure obtained at the 2002 CEA. 	<ul style="list-style-type: none"> - Double deflation using CPI relevant components for inputs and taxi fare for output.
Lorries	<ul style="list-style-type: none"> - Quarterly tonnage of goods loaded and unloaded from Civil Aviation Department and Customs Department - Lorry charges based on CEA and inflation. 	<ul style="list-style-type: none"> - Output based on the quarterly volume of goods transported and lorry charges. - Value added derived using the structure obtained at the 2002 CEA. 	<ul style="list-style-type: none"> - Double deflation using relevant CPI components for both output and inputs.
Water transport	<ul style="list-style-type: none"> - Quarterly number of passengers from Mauritius Shipping Corporation. 	<ul style="list-style-type: none"> - The number of passengers and fares charged as per CPI are used to estimate quarterly output. - Value added is derived using the production structure obtained at the 2002 CEA. 	<ul style="list-style-type: none"> - Volume based on number of passengers.
Air transport	<ul style="list-style-type: none"> - Quarterly receipts and expenditure from Air Mauritius Ltd. 	<ul style="list-style-type: none"> - Value added compiled from quarterly accounts 	<ul style="list-style-type: none"> - Double deflation using airfare index for output and relevant CPI components for inputs.
Services allied to transport	<ul style="list-style-type: none"> - Quarterly receipts and expenditure from Mauritius Ports Authority (MPA) and Cargo Handling Corporation (CHC). - Quarterly indicators such as aircraft landings and take offs, and tourist arrivals and Mauritian travelling abroad. 	<ul style="list-style-type: none"> - Value added compiled from quarterly accounts where available. - For other activities, annual estimates are quarterlised using the quarterly indicators. 	<ul style="list-style-type: none"> - Volume based on tonnage of goods loaded and unloaded. - Volume based on quarterly indicators.
Telecommunicati on services	<ul style="list-style-type: none"> - Quarterly receipts and expenditure of Mauritius Telecoms Ltd (MT). 	<ul style="list-style-type: none"> - Value added compiled from quarterly accounts. 	<ul style="list-style-type: none"> - Deflation by changes in the price of telephone calls.

Industry group	Data sources	Methods	Indicator - constant price estimates
J. Financial Intermediation			
Financial Intermediation	<ul style="list-style-type: none"> - Quarterly survey among all offshore and commercial banks, and insurance companies. 	<ul style="list-style-type: none"> - Value added compiled from quarterly accounts. 	<ul style="list-style-type: none"> - Banks: Double deflation using changes in interest rates for output and inflation for inputs - Insurance sector: Volume based on changes in the number of vehicles.
K. Real Estate, Renting & Business Activities			
Ownership of dwellings	<ul style="list-style-type: none"> - Number of housing units (Hu) from Housing Census - Expenditure by household on rent from household budget survey. 	<ul style="list-style-type: none"> - Output based on imputed rent of owner occupied dwellings estimated as the product of number of Hu and rent per Hu. - Value added is derived after deducting from the output, expenses on maintenance of residential buildings. 	<ul style="list-style-type: none"> - Deflation by quarterly Construction Price Index.
Renting and Business services	<ul style="list-style-type: none"> - Trends in related sectors. - Indirect indicators such as no. of cases lodged in court and tourist arrivals. 	<p>This sector comprises units which offer their services to different activities, both offshore and onshore. Their output consequently follow that of the respective activity groups.</p>	<ul style="list-style-type: none"> - Deflation by CPI.
L. Public Administration & Defence; Compulsory Social Security			
Public Administration and Defence; Compulsory Social Security	<ul style="list-style-type: none"> - Expenditure of Central Government from the Accountant General Department. 	<ul style="list-style-type: none"> - Estimates are made at cost, that is, the gross output is equal to the purchase of goods and services, compensation of employees and consumption of fixed capital; value added is equal to compensation of employees and consumption of fixed capital. 	<p>Deflation using a weighted index made up of quarterly wage rate index based on salary compensation, construction price index, price of transport equipment and machinery component of import price index.</p>

Industry group	Data sources	Methods	Indicator - constant price estimates
M. Education services			
Education Services	<ul style="list-style-type: none"> - Expenditure of Ministry of Education from the Accountant General Department. 	<ul style="list-style-type: none"> - Value added for education services provided by Government is estimated at cost, that is, it is equal to compensation of employees and consumption of fixed capital. 	<ul style="list-style-type: none"> Deflation using a weighted index made up of quarterly wage rate index based on salary compensation, construction price index, price of transport equipment and machinery component of import price index.
	<ul style="list-style-type: none"> - Annual data on enrolment from the Ministry of Education - Enrolment from private schools and Industrial Vocational Training Board (IVTB) - % change in fees charged for private tuition estimated from the sub-index for "Education" obtained from the CPI Unit 	<ul style="list-style-type: none"> - Private schools and IVTB: annual output is divided by 4. - Private tuition fees: output based on ten months only (February to November) are quarterlised accordingly. 	<ul style="list-style-type: none"> Volume based on enrolment statistics.
N. Health and Social Work			
Health and Social Work	<ul style="list-style-type: none"> - Expenditure of Ministry of Health from the Accountant General Department. 	<ul style="list-style-type: none"> - Value added for health services provided by Government is estimated at cost, that is, it is equal to compensation of employees and consumption of fixed capital. 	<ul style="list-style-type: none"> - Deflation using a weighted index made up of quarterly wage rate index based on salary compensation, construction price index, price of transport equipment and machinery component of import price index.
	<ul style="list-style-type: none"> - Annual production accounts of clinics. - Quarterly data on admissions in clinics and hospitals from the Ministry of Health. - No. of private medical practitioners from the Ministry of Health. - Fees charged from monthly consumer price surveys. 	<ul style="list-style-type: none"> Annual value added for private health services are computed using available production accounts of clinics and supplemented with indicators on private practitioners. The estimates are quarterlised using quarterly data on admissions to clinics and hospitals. 	<ul style="list-style-type: none"> - Deflation by CPI component.

Industry group	Data sources	Methods	Indicator - constant price estimates
- O. Other Community, Social & Personal Services			
Sanitary Services	<ul style="list-style-type: none"> - Quarterly production accounts of Waste Water Authority. - Quarterly surveys among a sample of private companies. 	<ul style="list-style-type: none"> - Value added compiled from quarterly accounts. 	<ul style="list-style-type: none"> - Deflation by CPI.
Amusement and Recreational Activities	<ul style="list-style-type: none"> - Monthly data from the VAT Department 	<ul style="list-style-type: none"> - Quarterly gross output derived from the VAT returns. - Value added estimated using technical coefficients obtained from latest available annual final production accounts. 	<ul style="list-style-type: none"> - Deflation by CPI.
Personal Services.	<ul style="list-style-type: none"> - Quarterly turnover from the VAT department - Demographic statistics such as births, deaths and marriages - Tourist arrivals 	<ul style="list-style-type: none"> - Quarterly gross output derived from the VAT returns. - Quarterly value added estimated using technical coefficients obtained from latest available annual final production accounts. - For companies not registered at the VAT: annual estimates are quarterlised using indirect indicators such as quarterly number of births, deaths, marriages, and tourist arrivals. 	<ul style="list-style-type: none"> - Deflation by CPI.
P. Private Households with Employed Persons			
Private households with employed persons	<ul style="list-style-type: none"> - Number of employees based on number of household with domestic employees as collected in Household Budget Survey (HBS). - Wage Rate from monthly consumer price surveys. 	<ul style="list-style-type: none"> - Annual estimate based on the number of persons employed and average wage divided by 4. 	<ul style="list-style-type: none"> - Deflation by wage increase due to salary compensation of July of every year.

**Data sources, methods and indicators used for the estimation of quarterly GDP
Expenditure approach**

Item	Sources & Methodology	Indicator – constant price estimates
Final Consumption Expenditure - Household (HH)	Annual estimates are quarterlised using Continuous Multi-Purpose Household Survey (CMPHS) and HBS structure adjusted for conceptual difference with national accounts.	- Deflation by CPI.
Final Consumption Expenditure – General Government	Government consumption expenditure is equal to the output (compensation of employees, consumption of capital and value of goods and services purchased) of General Government calculated at cost less goods or services sold plus expenditure on social benefits in kind. All data are available on a quarterly basis at the Accountant General Department, except consumption of capital, which is worked out by dividing the available annual estimate by 4.	- Deflation using a weighted index made up of quarterly wage rate index based on salary compensation, construction price index, price of transport equipment, machinery component of import price index and CPI.

Gross Domestic Fixed Capital Formation (GDFCF)		
Building and Construction		
Item	Sources & Methodology	Indicator – constant price estimates
Residential Building	Quarterly investment in residential buildings based on quarterly data on floor area from building permits (with a lag of 1 quarter) and quarterly Construction Price Index, together with quarterly data from National Housing Development Company (NHDC) and an estimate for projects for which no permit has been issued.	- Deflation by quarterly construction price index.
Non-Residential Building and Other Construction Work	Quarterly investment in non-residential buildings and other construction work based on quarterly building permits for non-residential buildings (lag by one quarter) and quarterly Construction Price Index, work in progress of large projects and quarterly data on Government capital expenditure available from the Accountant General Department.	

Machinery and Equipment		
Item	Sources & Methodology	Indicator – constant price estimates
Aircraft	Based on information provided by Air Mauritius Ltd	Exchange rate of the currency in which asset is purchased.
Marine Vessel	Based on information provided by Mauritius Ports Authority (MPA)	
Transport Equipment	Based on information on registered vehicles provided by National Transport Authority (NTA) classified as final consumption expenditure or investment according to purchasers. For transport equipment for which no registration is necessary, imports statistics are used.	- CPI component for car.
Other Machinery and Equipment.	<p>Estimates are mostly based on quarterly Trade Statistics given that most of the machinery and equipment are imported. The imported machinery and equipment goods are brought to purchasers' prices by adding all duties and taxes, landing cost, transport cost and margins. Duties and taxes are available from Customs Department, landing cost from Mauritius Ports Authority while rates of transport and margin are based on the results of the 2002 CEA. Annual installation cost obtained through surveys is quarterlised according to the quarterly trend of concerned machinery.</p> <p>Local production of machinery is estimated from outputs of companies producing capital goods.</p>	- Quarterly Import Price Index.
Exports and Imports of Goods and Services	Data available from the Quarterly Balance of Payments (BOP) of the Bank of Mauritius (BOM).	- Deflation using quarterly import and export price indices.

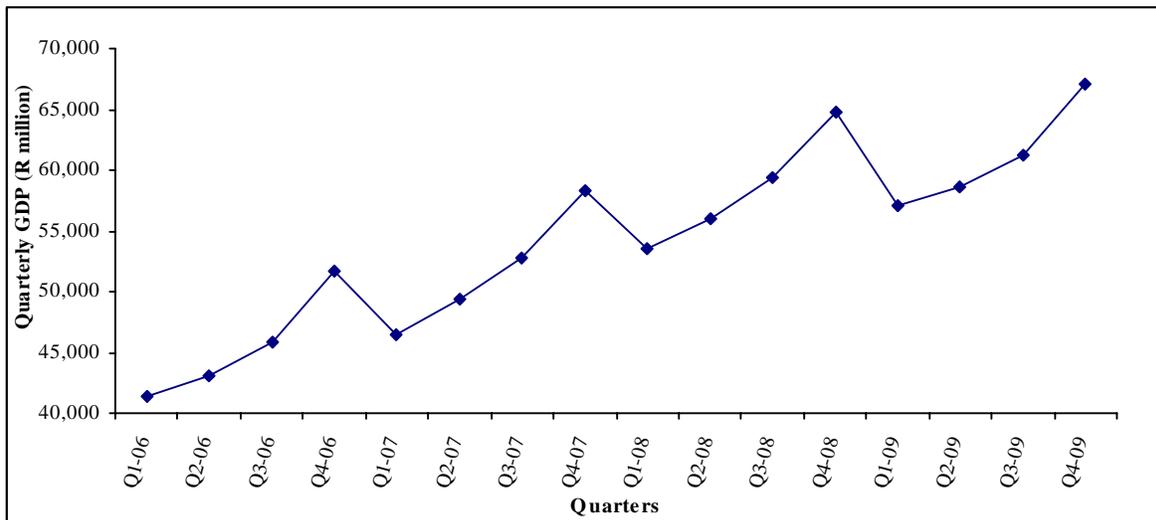

SECTION 2 – STATISTICAL ANALYSIS

1. Quarterly GDP estimates at current prices

1.1 Overall GDP

Figure 4.1 shows the quarterly GDP estimates at basic prices for 2006 to 2009. It is observed that throughout the period, the quarterly data follow the same pattern every year. Production is relatively low in the first quarter; it increases gradually in the two subsequent quarters to peak in the last quarter before declining in the first quarter of the following year. This pattern clearly indicates seasonality in the data. Thus, in 2008, GDP at current basic prices which stood at R 53,493 million in the first quarter, increased to R 56,069 million in the second and to R 59,421 million in the third to peak at R 64,701 million in the fourth quarter. It then declined to R 57,077 million in the first quarter of 2009.

Fig 4.1: Quarterly GDP estimates at current basic prices, Q₁ 2006 – Q₄ 2009

The lower GDP figures observed during the first quarters may be due to lower economic activities resulting from temporary closures of firms during the month of January because of New Year festivities. On the other hand, the higher GDP figures during the last quarters could be explained by more activities in “Hotels and restaurants” due to high tourist arrivals, and “Manufacturing” and “Wholesale and retail trade” to meet the high demand for consumption goods for end of year festivities.

Quarterly data for the years 2006 to 2009 indicate that around 23% of the annual GDP was produced in the first quarters, 24% in the second quarters, 25% in the third quarters and 28% in the fourth quarters.

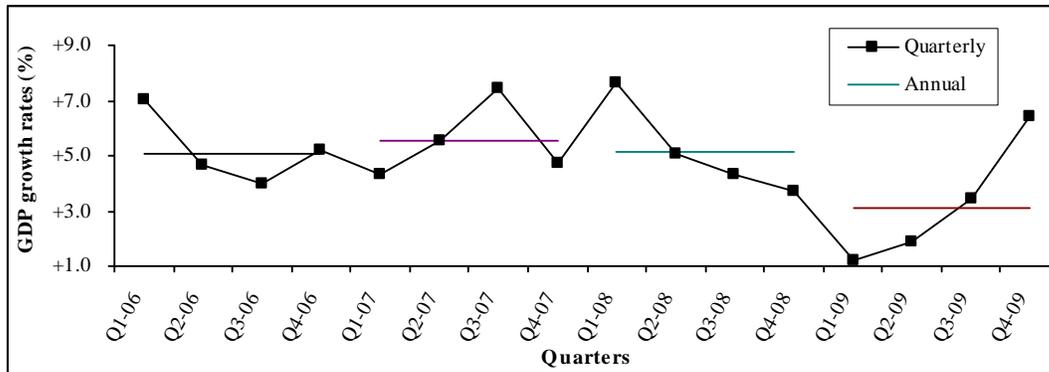

Quarterly GDP at current basic prices for the fourth quarter of 2009 is estimated at R 67,099 million compared to R 61,219 million in the previous quarter and to R 64,701 million in the corresponding quarter of 2008.

2. Quarterly GDP growth rates (based on data unadjusted for seasonality)

2.1 Growth rates, Q₁2006 – Q₄2009, (year on year change)

Figure 4.2 shows the year on year quarterly GDP growth rates for 2006 to 2009 and the annual rates for 2006 to 2009. The economy grew steadily during the period 2006 to 2008 as indicated by the annual GDP growth rates: 5.1% in 2006, 5.5% in 2007 and 5.1% in 2008. A slowdown is then observed in 2009 with a growth of only 3.1%.

Fig. 4.2: GDP growth rates, quarterly (percentage change over corresponding period of previous year) and annual, Q₁ 2006 – Q₄ 2009

Quarterly data indicates that after a high growth of 7.0% during the first quarter of 2006, GDP slowed down in the following quarters to pick up during the third quarter of 2007 when a growth of 7.5% was registered. It then dipped to 4.8% in the fourth quarter of 2007 but recovered in the first quarter of 2008 with a growth of 7.6%. Thereafter, quarterly GDP declined continuously to reach 1.2% in the first quarter of 2009. Improvement in the economy was subsequently observed when growths of 1.9%, 3.5% and 6.4% were registered for the second, third and fourth quarters of 2009 respectively.

2.2 Quarterly GDP growth, 2009

Growth was registered during all the four quarters of 2009. After the growth of 1.2% in the first quarter of 2009, real GDP improved steadily in the other quarters with a growth of 1.9% in the second quarter, 3.5% in the third quarter and 6.4% in the fourth quarter. The GDP growth in 2009 is mainly attributable to the sectors, “Manufacturing”, “Construction”, Wholesale and retail; repair of motor vehicles, motorcycles, personal and household goods”, “Transport, storage and communications”, “Financial intermediation” and “Real estate, renting and business activities”.

The contribution of an industry to GDP growth depends on two factors, namely, its share in the economy and the change in its real value added. From Table A, it is observed that the main contributors to the 1.2% growth in GDP during the first quarter of 2009 were “Real estate, renting and business activities” (0.8 percentage point), “Financial intermediation” (0.7 percentage points) and “Transport, storage and communications” (0.4 percentage point).

In the second quarter of 2009, the main contributors to the 1.9% growth were “Real estate, renting and business activities” (0.8 percentage point), “Financial intermediation” (0.6 percentage points) and “Transport, storage and communications” (0.6 percentage point).

During the third quarter, the main contributors were “Agriculture, hunting, forestry and fishing” (0.7 percentage point), “Transport, storage and communications” (0.7 percentage point), “Real estate, renting and business activities” (0.7 percentage point), “Construction” (0.5 percentage point), and “Financial intermediation” (0.5 percentage point).

As for the fourth quarter, the main contributors were “Construction” (1.6 percentage points), “Manufacturing” (1.0 percentage point), “Wholesale & retail trade, etc” (0.7 percentage point), “Agriculture, hunting, forestry and fishing” (0.6 percentage point), “Transport, storage and communications” (0.6 percentage point) and “Real estate, renting and business activities” (0.6 percentage point).

Table A: Contribution of industry groups to GDP growth (percentage point), Q₁ 2008 – Q₄ 2009

Industry	Contribution to GDP growth							
	Q ₁ 2008	Q ₂ 2008	Q ₃ 2008	Q ₄ 2008	Q ₁ 2009	Q ₂ 2009	Q ₃ 2009	Q ₄ 2009
Agriculture, hunting, forestry and fishing	0.2	0.0	0.2	0.0	0.2	0.4	0.7	0.6
Mining and quarrying	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0
Manufacturing	0.8	0.8	0.4	0.5	0.0	-0.3	0.1	1.0

Education	0.1	0.1	0.1	0.2	0.1	0.1	0.1	0.1
Health and social work	0.2	0.2	0.0	0.2	0.2	0.2	0.3	0.2
Other community, social and personal service activities and private households with employed persons	0.3	0.4	0.4	0.2	0.3	0.4	0.3	0.4
FISIM	-0.6	-0.5	-0.6	-0.5	-0.3	-0.3	-0.3	-0.3
GDP at basic prices	7.6	5.1	4.3	3.7	1.2	1.9	3.5	6.4

Contribution of an industry to the GDP growth is calculated as the product of its share in the economy and the year on year growth rate.

2.3 GDP growth by industry, 2009

Growth recorded by the different industry groups during the four quarters of 2009 are given in Table 4.2. The performance of the main sectors of the economy was as follows:

“Agriculture, hunting, forestry and fishing” grew by 4.1% in the first quarter of 2009, 9.9% in the second quarter, 13.5% in the third quarter and 13.0% in the fourth quarter. The growth during the four quarters were the result of growth in sugar cane (+15.0% in each quarter) and also high growth in “Other agriculture” (+6.4% in the second quarter, +12.2% in the third and 11.4% in the fourth), except for a decline noted for the first quarter (-4.6%).

“Manufacturing” registered negative growths of 0.2% and 1.6% in the first and second quarters of 2009 but improved in the third and fourth quarters with growths of 0.6% and 4.7% respectively.

“Construction” contracted by 1.0% in the first quarter of 2009 and by 3.9% in the second quarter but picked up in the third quarter with a growth of 7.0%. This was followed by a high growth of 24.8% in the final quarter of 2009.

“Wholesale and retail trade; repair of motor vehicles, motorcycles, personal and household goods” declined by 2.4% in the first quarter of 2009 and by 0.6% in the second quarter but recovered in the third and fourth quarter of 2009 with growths of 2.1% and 5.0% respectively.

“Hotels and restaurants” recovered with a growth of 3.0% in the fourth quarter of 2009 after registering declines of 9.8%, 6.2% and 9.1% in the first, second and third quarter respectively.

“Transport, storage and communications” registered growths ranging from +3.0 to +6.0% during the four quarters of 2009.

“Financial intermediation” recorded growths of 5.6%, 4.9%, 4.3% and 5.3% in all four quarters of 2009 respectively.

“Real estate, renting and business activities” registered a steady growth during 2009 with rates ranging from +6.3% in the first quarter to +5.5% in the last quarter.

3. Quarterly GDP by expenditure

3.1 Quarterly GDP by expenditure, 2009

Final consumption expenditure which comprises consumption expenditure of households and general government, amounted to R 56,756 million in the first quarter of 2009, R 59,009 million in the second, R 61,054 million in the third and R 68,096 million in the fourth quarter (Table 4.3). Consumption of households which represented 73.5% of the quarterly GDP in the first quarter of 2009 remained almost stagnant to 73.6% in the second quarter before continuously increased in the remaining quarters to reach 75.8% in the fourth quarter. On the other hand, general government consumption expenditure decreased from 14.6% of GDP in the first quarter to 14.1% in the fourth quarter, after initially increasing to 15.7% in the second quarter. Hence, total final consumption expenditure which represented 88.2% of the quarterly GDP at market prices in the first quarter increased to 89.9% in the last quarter.

Analysis of quarterly data from 2006 to 2009 shows seasonality in household consumption expenditure with highest consumption occurring during the fourth quarters. In 2009, it is noted that household consumption expenditure during the fourth quarter represented 28% of the yearly total compared to 23%, 24% and 25% in the first, second and third quarters respectively.

“Exports of goods” is observed to be highest during the third and fourth quarters while “Exports of services” which comprises mainly tourist earnings and revenue of the national airline from foreign travellers is highest during the first and fourth quarters.

Imports of goods are highest in the fourth quarters, mainly explained by high consumption at the end of the year.

There is no distinct seasonal pattern in the data for general government consumption expenditure, Gross Domestic Fixed Capital Formation (GDFCF) and imports of services.

3.2 Quarterly growth rates of expenditure components, 2009

Analysis of year-on-year quarterly GDP by expenditure shows that total final consumption expenditure grew by 1.4% and 1.8% in the first and second quarters of 2009 respectively and then picked up in the third and fourth quarters with growths of 3.5% and 3.9% (Table 4.4). After recording growth rates of 1.5%, 1.6% and 2.2% respectively during the first three quarters of 2009, household consumption expenditure registered a higher growth of 2.9% in the last quarter of 2009. As for general government expenditure, the pattern of growth noted was +0.8% in the first quarter, +2.4% in the second, +10.2% in the third and +8.5% in the last quarter.

After a growth of +3.5% in the first quarter of 2009, investment registered a lower growth of +0.9% in the second quarter before contracting by 2.0% in the third quarter. It then showed a higher growth of 39.4% in the fourth quarter of 2009. The growth of the first quarter of 2009 was mainly due to a high growth in “Machinery and equipment” (+11.3%), partly offset by a negative growth of 0.4% in “Building and construction work”. In the second quarter of 2009, the low growth in investment was explained by a growth of 8.6% in “Machinery and equipment, offset by a decline in “Building and construction work” (-3.9%). In the third quarter, the decline in investment (-2.0%) is due to a decline of 15.6% in “Machinery and equipment”, partly offset by an 8.2% growth in “Building and construction work”. In the last quarter of 2009, the high growth 39.4% in investment was the result of growths of 27.5% in “Building and construction work” and 55.3% in “Machinery and equipment.

After a series of negative growths during the first three quarters of 2009, both exports of goods and services picked up in the fourth quarter. Export of goods and services registered declines of 4.7%, 10.7% and 6.1% in the first, second and third quarters of 2009 respectively but recovered in the fourth quarter with a growth of 1.0%. As for imports of goods and services, after contractions of 15.5%, 8.3% and 0.7% for the first, second and third quarters of 2009, it picked up with a growth of 5.8% in the fourth quarter.

4. Seasonally adjusted quarterly GDP

Table B and figure 4.3 below show the year-on-year quarterly GDP growth rates based on unadjusted data and the quarter-to-quarter growth rates based on seasonally adjusted data for the period 2002 to 2009.

As indicated earlier, while the year-on-year growth rates can be used to analyse trends, the quarter to quarter growth rates provide a more meaningful trend analysis with the advantage of being able to detect trend changes much earlier. For example, the year-on-year growth rates show a sharp decline in economic activities during the first quarter of 2005 and a slow pick up in the second quarter. On the other hand, the quarter-to-quarter data reveal slowing down of the economy as early as from the second quarter of 2004.

Seasonally adjusted growth rates by industry group is provided in table 4.5.

4.1 Seasonally adjusted quarterly GDP growth, 2009 (Quarter to quarter)

Quarter to quarter GDP growth rates based on seasonally adjusted data show that the economy, after a decline of 0.8% registered for the first quarter of 2009, improved as from the second quarter with growths of 0.6%, 3.4% and 3.3% in the second, third and fourth quarter respectively.

Users may consult the website of the CSO (<http://statsmauritius.gov.mu>) for seasonally adjusted growth rates by industry group.

Table B: Quarterly GDP growth rates, Q₁ 2002 – Q₄ 2009

**Table 5.3 (cont'd) - Classification of imports (c.i.f. value) into consumption¹
by industrial origin and use, 2006 - 2008**

(R million)

NSIC Div.	Industrial Origin	Economic categories - 2006			
		Total	Intermediate consumption	Final consumption of household	Gross domestic fixed capital formation
01	Agriculture, hunting and related service activities	4,063.6	2,983.5	1,068.4	11.7
02	Forestry, logging and related service activities	124.1	124.1	-	-
05	Fishing, operation of fish hatcheries and fish farms: service activities incidental to fishing	77.4	2.6	74.8	-
14	Other mining and quarrying	1,165.0	1,165.0	-	-
15	Manufacture of food products and beverages	12,853.5	4,597.4	8,256.1	-
16	Manufacture of tobacco products	100.4	-	100.4	-
17	Manufacture of textiles	7,471.7	7,386.3	85.4	-
18	Manufacture of wearing apparel; dressing and dyeing of fur	958.5	180.8	777.7	-
19	Tanning and dressing of leather; manufacture of luggage, handbags, saddlery, harness and footwear	775.6	332.6	443.0	-
20	Manufacture of wood and products of wood and cork except furniture; manufacture of articles of straw and plaiting materials	920.6	892.6	28.0	-
21	Manufacture of paper and paper products	1,669.4	1,484.8	184.6	-
22	Publishing, printing and reproduction of recorded media	712.7	172.6	520.5	19.6
23	Manufacture of cork, refined petroleum product and nuclear fuel	12,467.7	9,197.8	3,269.9	-
24	Manufacture of chemicals and chemical products	7,635.2	5,125.2	2,510.0	-
25	Manufacture of rubber and plastic products	2,306.1	2,050.2	255.9	-
26	Manufacture of other non-metallic mineral products	2,686.2	2,557.8	128.4	-
27	Manufacturing of basic metals	3,397.5	3,384.4	13.1	-
28	Manufacture of fabricated metal products, except machinery and equipment	2,834.3	2,208.9	290.3	335.1
29	Manufacture of machinery and equipment n.e.c	7,451.6	2,019.2	657.3	4,775.1
30	Manufacture of office, accounting and computing machinery	1,710.0	516.1	2.4	1,191.5
31	Manufacture of electrical machinery and apparatus n.e.c	2,757.9	1,456.6	155.6	1,145.7
32	Manufacture of radio, television and communication equipment and apparatus	2,404.3	432.9	937.4	1,034.0
33	Manufacture of medical, precision and optical instrument, watches and clocks	1,214.3	343.2	132.8	738.3
34	Manufacture of motor vehicles, trailers and semi-trailers	2,740.8	311.9	1.0	2,427.9
35	Manufacture of other transport equipment	6,167.7	214.2	42.1	5,911.4
36	Manufacture of furniture; manufacturing n.e.c	2,023.7	1,131.5	616.1	276.1
74	Other business activities	38.2	38.2	-	-
90	Sewage and refuse disposal, sanitation and similar act.	1.0	1.0	-	-
92	Recreational, cultural and sporting activities	24.5	15.4	9.1	-
	TOTAL	88,753.5	50,326.8	20,560.3	17,866.4

1 Figures for imports into consumption are obtained as follows:

Total imports + imports ex-warehouse - imports into warehouse less total re-exports, petroleum products for foreign aircraft and vessel

CHAPTER 7

INSTITUTIONAL SECTOR ACCOUNTS

2002 - 2005

Institutional Sector Accounts

1. Institutional Sectors

For the purpose of the analysis of production, the economy is split into industry groups but to analyse flows affecting income, capital and financial transactions, the different units involved in production, redistribution and consumption are grouped into 'institutional sectors' as follows:-

- Households including Non-Profit Institutions Serving Households (NPISH)
- Non-financial corporate including quasi-corporate enterprises
- Financial enterprises
- General Government and
- Rest of the World.

(i) Households: The household sector covers:

- (a) individuals as consumers
- (b) entrepreneurs, individual proprietors and partnerships
- (c) non-profit institutions serving households (NPISH).

(ii) Non-financial corporate enterprises cover all private or public companies and public corporations which are principally engaged in the production of goods and non-financial market services.

(iii) Financial corporate enterprises include the Central Bank, commercial banks, other monetary and credit institutions and companies engaged in insurance

(iv) General Government comprises:

- (a) Most Ministries and departments of the central and local government
- (b) Social Security Schemes and
- (c) Non-profit institutions entirely or mainly financed by government.

(v) Rest of the World: The rest of the world accounts provide an overall view of the economic relationships linking the national economy with the rest of the world.

2. Integrated Economic Accounts of the Nation

The Integrated Economic Accounts of the country presents in a concise form (in the form of a T table), the goods and services account, the Generation and Allocation of Income, Distribution and Use of Income and Capital Account of the Institutional Sectors of the economy. The Institutional Sectors are the sectors as described in (1) above. Table 7.1 shows the accounts for the whole economy for years 2002 to 2005. Accounts for years 2002 to 2005 for the institutional sectors are given in tables 7.2 to 7.6

Receipts are recorded on the right (Resource) whilst payments (Uses) are shown on the left. For example in 2002 the Non-Financial Corporate Sector received R 150,812 million as gross output and used R 81,827 million for the purchase of intermediate goods and services and R 29,014 million was paid as compensation of employees (Table 7.3).

Each line represents a transaction or a residual balancing item. Balancing items derived from the accounts are gross value added, gross operating surplus, gross disposable income, gross saving and gross lending/borrowing.

A balancing item appears twice, both as a resource and as a use. For example gross operating surplus is calculated in the generation of income account as the difference between value added and compensation of employees and taxes on production. It therefore appears on the left in the generation of income account. Gross operating surplus also constitutes a resource for the allocation of primary income account. It therefore appears on the right in that account.

One important balancing item is lending (+)/ borrowing (-). A positive sign means that the sector has an excess of resources and can lend to other sectors while a negative sign indicates a need for

borrowing fund from other sectors. For example we can see that in 2002, the Government Sector had to borrow Rs. 3,861 million from the other sectors.

(i) Data Limitations

Data on income and expenditure flows in respect of each of the sectors mentioned above are very scarce because of the high non-response rate in this area.

The preparation of these tables has required much estimation work based on indirect methods. The annual reports of companies and banks together with the tabulations obtained from the Bank of Mauritius were very useful.

The tables are provisional and will be revised in the light of information on financial flows after the completion of the Financial Accounts.

CHAPTER 8

SUPPLY AND USE TABLE

The Mauritian Economy - 2002

The Supply and Use Table (SUT)

1. General

The Supply and Use Table (SUT) is a core table in the System of National Accounts. It presents for the total economy, by product group, the resources and uses of goods and services. The flow of goods and services is therefore traced from their producers to their users. For each product, total supply should balance with total use (in purchasers' price).

The basic equation is:

$$\left[\begin{array}{l} \text{Output + Imports} \\ \text{+ Gross Domestic Fixed Capital Formation} \end{array} \right] \text{(Production) (total supply)} = \left[\begin{array}{l} \text{Intermediate Consumption + Exports} \\ \text{+ Final consumption + Changes in inventories} \end{array} \right] \text{(total use)}$$

The SUT therefore provides a framework for checking on the consistency of statistics on the flows of goods and services, obtained from the different sources. The SUT also serves as the foundation for the construction of Input /Output Tables.

2. The SUT 2002 Format

2.1 The Supply Table (Table 8.1) gives information about the supply of goods and services.

- In the rows, the various types of products (66) are presented according to the Central Product Classification (CPC).
- In the columns, from the right imports then the output matrix of industries

Since output is valued at basic prices, additional columns for subsidies, taxes on products, transport and trade margins are added to bring supply at purchasers' price. Also, since total imports are valued f.o.b and imports by product, c.i.f., a column on 'adjustment to f.o.b' is added to reconcile the different valuations.

2.2 The Use Table (Table 8.2) gives information about the different uses.

- The same classification of products as in the Supply Table is used in the rows.
- The columns show the different uses, namely a matrix of Intermediate Consumption by industries and the final uses: Exports, GDFCF, Final Consumption and Changes in inventories.

Table 8.1 - Supply Table 2002

CHAPTER 9

INPUT - OUTPUT TABLE

The Mauritian Economy - 2002

Input-Output Table for the Mauritian Economy - 2002

Introduction

The Input Output (I/O) Table gives the picture of input composition and output distribution of each product. On the assumption of stable or linear technical correlation between input and output, the table serves as an effective analytical tool for the study of economic repercussion. For instance, it illustrates the ultimate effect (direct and indirect) of a unit increase in domestic demand for a certain good on product output or value added

2 Main Tables

The following three main tables have been produced namely:

Table 9.1- The product by product I/O Table

Table 9.2- The Table of Coefficients and

Table 9.3- The Inverted Matrix.

3 The Mauritian Input - Output Table (Table 9.1)

The Input-Output table contains three quadrants which describe the supply and use of products of the entire economy:

(a) The upper-left part, quadrant I represents the intermediate use and also gives the name to the table, as it is shown in the form of product-by-product. This quadrant shows how much of each product (shown in rows) is used as intermediate consumption for the manufacture of a product (shown in columns).

(b) The upper-right, quadrant II shows data on final use, that is how the total supply (imports and local production) meets final use (exports, final consumption or Gross Fixed Capital Formation). Imports is shown as negative elements by products (at c.i.f. prices and with a c.i.f./f.o.b. adjustment item to arrive at imports f.o.b.). Thus, the grand total for each row and column gives the product output.

(c) The lower-left part, quadrant III shows the use of value added namely compensation of employees, taxes on production and imports and gross operating surplus.

3.2 The Table of Coefficients (Table 9.2)

Table 9.2 shows input or technical coefficients derived from the input output table. It represents the inter-relationship among the different products. The cells of the coefficient table are obtained by dividing each cell of quadrants I and III of Table 9.1 by the total of the column in which the item appears.

3.3 The inverted matrix (Table 9.3)

Table 9.2, the table of technical coefficients is of limited use because it shows only the **first round effects** of a change in the output of one industry only, that is the direct effect. The inverted matrix enables the calculation of the combined direct and indirect effects.

The inverted matrix is obtained by inverting the matrix which is obtained after subtracting the matrix A from the identity matrix where the matrix A is the 26 X 26 matrix of coefficients of Quadrant I. The inverted matrix $(I-A)^{-1}$ enables the measurement of the **full impact** of any change.

4 Methodology

4.1 Concept

Data have been compiled in accordance with the concepts and definitions recommended in the United Nations Manual : A System of National Accounts SNA 1993. The classification by products is based on the Central Product Classification Ver. 1.0.

4.3 Valuation

All inputs are valued at purchasers' prices and outputs at basic prices.

5 Data sources

5.1 2002 Census of Economic Activities

Detailed data required for the construction of the 2002 I/O table were collected through the 2002 Census of Economic Activities.

5.2 2001/2002 Household Budget Survey

Data from the 01/02 Household Budget Survey (HBS), adjusted for under reporting and difference in concepts, provided estimates for final consumption of Households.

5.4 Balance of Payments

The 2002 Balance of Payments prepared by the Bank of Mauritius provided details on imports and exports of services.

Table 9.1 - Input-output symmetric table, basic prices - product by product, 2002

Taxes less subsidies on production and imports					
Taxes on products					
Subsidies on products					
Other taxes less subsidies on production					
Gross operating surplus					
Output of products at basic prices					

Table 9.1 (cont'd) - Input-output symmetric table, basic prices - product by product, 2002

Rs 000

Central Product Classification Description	Changes in Inventories	C.I.F/F.O.B adjustment	Output of Products	Taxes on less subsidies on products	Total Economy
Products of agriculture, horticulture and 1 market gardening, forestry and logging products	-1,607,914	0	2,089,250		2,089,250
2 Sugar Cane	0	0	5,497,900		5,497,900
3 Live animals and animal products	724,283	0	2,076,639		2,076,639
4 Fish and other fishing products	-1,268,035	0	711,788		711,788
5 Ores and Minerals	-526,829	0	1,505,551		1,505,551
6 Meat, fish, fruit, vegetables, oils and fats, grain mill products, starches and starch products and beverages	1,154,612	0	12,622,958		12,622,958
7 Sugar	-1,019,925	0	8,324,997		8,324,997
8 Yarn and thread; woven and tufted textile fabrics	-266,197	0	5,794,092		5,794,092
9 Knitted or crocheted fabrics; wearing apparel	-1,111,952	0	29,125,819		29,125,819
10 Other manufactured goods	4,442,535	0	17,724,207		17,724,207
11 Constructions and construction services	0	0	18,616,150		18,616,150
12 Wholesale and retail trade services	0	0	19,430,350		19,430,350
13 Lodging; food and beverage serving services	0	0	14,554,184		14,554,184
14 Land, water, air, supporting and auxilliary transport services	0	4,325,000	23,999,274		23,999,274
15 Electricity distribution services; gas and water distribution services through mains	0	0	6,796,700		6,796,700
16 Financial intermediation, insurance and auxiliary services	0	61,061	14,063,214		14,063,214
17 Real estate services	0	0	8,883,909		8,883,909
18 Telecommunications services; information retrieval and supply services	0	0	7,132,676		7,132,676
19 Other business services	0	0	15,857,876		15,857,876
20 Public administration and other services to the community as a whole; compulsory social security services	0	0	10,823,000		10,823,000
21 Education services	0	0	6,248,679		6,248,679
22 Health and social services	0	0	4,993,422		4,993,422
23 Sewage and refuse disposal, sanitation and other environmental protection services	0	0	497,665		497,665
24 Services of membership organizations	0	0	238,089		238,089
25 Recreational, cultural and sporting services	0	0	3,180,497		3,180,497
26 Other services	0	0	977,454		977,454
Direct purchases in domestic market by non-residents	0	0	0		0
Imports of goods and services	-66,976	-4,386,061	83,964,001		83,964,001
of which fuel	-3,861,997	0	6,285,437		6,285,437
Total uses at basic prices	453,601	0	325,730,342		325,730,342
Taxes on products	0	0	18,075,500		18,075,500
Subsidies on products	0	0	-1,016,100		-1,016,100
Total uses at purchaser' prices	453,601	0	342,789,742		342,789,742
<i>Total Gross Value Added/GDP</i>				17,059,400	142,484,300
Compensation of employees					53,145,398
Taxes less subsidies on production and imports					18,223,700
Taxes on products				18,075,500	18,075,500
Subsidies on products				-1,016,100	-1,016,100
Other taxes less subsidies on production					1,164,300
Gross operating surplus					71,115,201
Output of products at basic prices
