Quarterly Export Price Index (EPI)
2nd Quarter 1999
(Base Year 1993=100)

1. Introduction

This issue of the Economic and Social Indicators presents quarterly Export Price Indices for the first semester of 1999 together with quarterly figures for the year 1998. The Export Price Index (EPI) provides a measure of price changes of exports. It is a measure of pure price changes (in Mauritian rupees) of domestically produced goods exported to other countries. The base and reference period for the EPI is calendar year 1993.

A technical note on the construction of the EPI is annexed. Table 1 presents quarterly indices by Standard International Trade Classification (SITC Rev 3). Changes by index points and percentage changes for each quarter compared to the previous one are shown in the Tables 3 and 4 respectively while Tables 5 and 6 show the point change and percentage change when corresponding quarters are compared.

2. Structure of the EPI

The EPI is compiled using the Standard International Trade Classification of the United Nations (SITC Rev 3). The index covers only five sections of the SITC namely: "*Food and live animals*", "*Crude materials, inedible, except fuels*", "*Chemicals and related products*", "*Manufactured goods classified chiefly by raw materials*" and "*Miscellaneous manufactured articles*". Distribution of weights for the different sections, groups of commodities and items are given in Table 1. In addition to the overall index, separate sub-indices are also given for different product categories.

3. Quarterly Changes (2nd quarter 1999)

The export price index fell by 2.2 points (or 1.5%) from 148.1 in the first quarter of 1999 to reach 145.9 in the second quarter. The index was mostly affected by a fall of 2.1% in the export prices of goods falling under Section 8 of SITC, namely "*miscellaneous manufactured articles*", which carry about 65% of the total weight. Prices of "*manufactured goods classified chiefly by material*" fell by 2.2% while a 0.4% decrease was noted in export prices of "*Food and live animals*". On the other hand, prices of goods falling under sections "*crude materials, inedible, except fuels*" and "*chemicals and related products*" increased by 6.3% and 4.8% respectively during those two quarters. However these two sections together represent only 1.6% of the total weight.

Compared to the corresponding quarter of 1998, the index for the second quarter of 1999 rose by 4.6%. Increases were registered for all the SITC sections covered by the index, with the exception of "*manufactured goods classified chiefly by material*" which fell by 11.5%. The 4.6% rise in the overall index was mainly the effect of increases of 6.1% in prices of "*food and live animals*" and 4.5% in those of "*miscellaneous manufactured articles*". The index for "*chemicals and related products*" went up by 10.6% and that of "*crude materials, inedible, except fuels*" rose by 4.6%.

3.1 Sub-indices by section and commodity

Food and live animals

The "*Food and live animals*" section carries about 31% of the total weight. "Sugar" accounts for 88% of the weight of this section while the remaining 12% comprises meat and meat preparations, fish and fish preparations, tea, molasses and cereal and cereal products.

During the second quarter of 1999, the sub-index for "*food and live animals*" went down to 138.5 (-0.4%) from 139.1 in the first quarter. With the exception of sugar, molasses and tea, whose export prices kept their levels of the previous quarter, the prices of all other commodities in this section experienced decreases varying between 1.2%, in the case of "*fish and fish preparations*", and 12.4% for "*meat and meat preparations*".

When compared to the second quarter of 1998, the index for this section rose by 6.1% mainly due to a 9.0% rise in the export prices of sugar.

Crude materials, inedible, except fuel

The index for cut flowers, the only constituent of this section, rose by 6.3% when compared to the first quarter of 1999 and by 4.6% when compared to the second quarter of 1998.

Chemicals and related products

The sub-index for this section, which consists mainly of pharmaceutical products and fertilisers, increased from 101.8 in the first quarter of 1999 to 106.7 (+4.8%). The increase is higher still (10.6%) when compared to the corresponding period of 1998.

Manufactured goods classified chiefly by materials

Export prices of goods in this section which consists mainly of textile fabrics went down by 2.2% compared to the first quarter of 1999, resulting from a decrease of 1.8% in the prices of "*cotton fabrics*" and a decrease of 3.7% in those of "*other textile fabrics*". When compared to the second quarter of 1998, however, the index for this section declined by 11.5%.

Miscellaneous manufactured articles

This is the most important group of the index and carries about 65% of the total weight. It consists exclusively of articles of wearing apparel from the Export Processing Zone (EPZ).

Compared to the previous quarter, the index for this section fell by 2.1%. Export prices of "*articles of apparel and clothing accessories*", accounting for 94% of this section, fell by 1.8%. Export prices of "*optical goods, watches and clocks*" and "*footwear*" rose by 5.4% and 8.2% respectively.

When compared to the corresponding quarter of 1998, however, the export price index of miscellaneous manufactured articles showed an increase of 4.5% . The only group under this section which registered a fall (-1.6%) in export prices was "*women's or girls' coats, jackets, etc. knitted or crocheted*".

Technical Note

Export Price Index (EPI)

Methodology for the Construction of the EPI

Definition

The Export Price Index (EPI) is a measure of price change of domestically produced Mauritian products exported to other countries i.e it excludes re-exports. In addition to the overall index, separate sub-indices are also calculated for different product categories at more detailed level.

Comparison with Unit Value Index

The Unit Value Export Index provides only a proxy measure for price changes of exported goods. It is derived from value and quantity data of products or groups of products obtained from trade returns and is thus highly dependent on the degree of homogeneity of the groups of products considered. On the other hand, the EPI measures pure price changes and is based on actual price measurements of relatively more homogeneous group of products. It requires elaborate specifications of products and takes account of all the main price determining factors such as country of destination, quality, mode of transport and mode of payment.

Scope and Classification

The EPI covers all domestic exports, the most important commodities being sugar, molasses, tea and textile fabrics and articles of apparel and clothing accessories produced by the EPZ sector.

The index is based on the Nomenclature of the Standard International Trade Classification of the United Nations (SITC Rev 3). Separate sub-indices are produced for each SITC section and for more detailed groups where possible.

Selection of Items and Firms

A representative sample of 42 firms has been selected from trade declarations submitted to the Customs and Excise Department in 1993. The sample was drawn from exporting firms on the basis of regularity of their trade and their volume of exports. A total of 119 items (Entry Level Items, ELI's) which represent 32 product groups are priced from the selected enterprises.

Weighting Scheme

The weights are derived from the 1993 domestic exports. Weights assigned to each section and group are based on their export values in 1993. Each product or group of products selected for pricing purposes represents all products that fall within that weight group.

Base and Reference Period

The base price as well as the reference period for the EPI is calendar year 1993. Bench mark data for the year 1993, based on trade returns, have been used to derive weights. The selected firms have supplied prices of selected commodities for each of the 12 months in 1993. The yearly average price of each product has then been worked out and is used as base price for that product.

Price Collection

Prices are collected directly from co-operating export firms. As far as possible price quotations are reported on a free on board (F.O.B.) basis and are mostly contract prices. Each reporting firm is visited once every quarter but prices are supplied on a monthly basis and are averaged for each quarter.

Sugar and Molasses

Due to their specificity, sugar and molasses have been treated differently. Sugar and molasses produced during a crop year, which normally extends between July and June of the following year, are usually exported during that same crop year. Export prices of these commodities, sugar in particular, are mostly negotiated prices. These prices can be quite volatile between quarters depending on the destination of the shipments. Therefore, in order to eliminate these price distortions between quarters, the same average yearly price for the crop year is used for the four quarters comprising that crop year. The base price of these commodities for the year 1993 is the average price for crops years 92/93 and 93/94.

Calculation of the EPI

A modified Laspeyres formula based on the weighted average of price relatives is used to calculate the EPI: the mathematical form of the formula is shown below:

$$I_{ot} = \frac{\sum W_i \times \frac{P_{it}}{P_{io}} \times 100}{\sum W_i}$$

Where I_{ot} is the index for period t compared to base period 0

w_i is the weight of the i^{th} element

P_{io} is the base price of the i^{th} element

P_{it} is the price of the i^{th} element in period t

$\frac{P_{it}}{P_{io}}$ is the price relative of the i^{th} element
in period t relative to base period 0

Σ means summation over all selected elements

Uses

The primary use of the EPI is to deflate export trade statistics. It provides quarterly measures of price trends of Mauritian products sold abroad and can be used for calculating changes in the volume of exports.

It can also serve as a basis to assess the competitiveness of Mauritian products in relation to price trends of common products of other countries with which Mauritius competes for markets.
