

Producer Price Index - Agriculture (PPI-A)

(October – December 2001)

Introduction

The Producer Price Index-Agriculture (PPI-A) gives a measure of the average change in the selling prices which producers receive for their agricultural products. This issue of the "Economic and Social Indicators" presents monthly PPI-A indices for October, November and December 2001 as well as figures for preceding months updated in the light of additional information that have now become available.

It is recalled that the monthly indices are computed using calendar year 1993 as the reference period. Quarterly and annual indices have been computed using a weighting system based on the production value for the base period.

2 Structure of the PPI-A (Base year: 1993=100)

The PPI-A covers two sub-groups, namely "Crop Products" and "Animals and Animal Products". "Crop Products" is further subdivided into "Sugar Cane" and "Other Crop Products". Sugar cane heavily influences both the "overall" index and the "Crop Products" sub-group index, of which it constitutes 71.9% and 82.6% respectively. The price of sugar cane itself becomes available in final form only at the end of the crop year (July to June) and this price is assumed to have prevailed during the whole of the crop year.

2.1 Changes in the monthly index

The overall PPI-A stood at 141.9 at the end of December 2001 following marginal increases of 0.2% and 0.3% in October and November respectively and then an increase of 1.8% in December. Compared to 138.7 in September 2001, this represents a rise of 2.3% or 3.2 points.

The index for the sub-group "Crop Products", which carries 87.1% of the total weight, rose by 3.1% or 4.3 points from 139.8 in September to 144.1 in December 2001. This was heavily influenced by increases in the prices of fresh vegetables as follows : October(3.0%), November(3.4%) and December(11.8%).

On the other hand, the index for the sub-group "Animal and Animal Products" fell by 3.1% or 4.1 points from 130.9 in September to 126.8 in December. The index declined by 1.8% in October and by 1.3% in November , mainly because of drops in the prices of eggs (6.1% in October and 5.1% in November) and of honey (5.0% in October and 1.1% in November). The index remained unchanged during the month of December.

More details of changes on a month-to-month basis are given in Table 2 and changes over the corresponding month of the previous year in Table 3.

2.2 *Changes in the quarterly index*

Table 4 gives the evolution of the agricultural producer price index on a quarterly basis. The overall index for the fourth quarter of 2001 showed a slight drop of 0.3% over the previous quarter but a rise of 4.2% over the corresponding quarter of 2000.

Percentage changes on a quarterly basis and the net contributions of commodity groups and products to the change are given in Table 5.

2.3 *Annual index*

The annual indices for the years 1998 to 2001, annual changes and the net contributions of commodity groups and products to the change are presented in Table 6. Average prices producers received from the sale of agricultural products in 2001 were 1.6% higher compared to 2000.
