

PRODUCER PRICE INDEX - MANUFACTURING (PPI-M)

1st Quarter 2002

1. Introduction

The Producer Price Index (PPI-M) measures changes in the effective selling prices received by producers for that part of their output which is sold on the domestic market. It reflects the price trends of a constant basket of goods which represent the output of the selected industries.

The Central Statistics Office first published a Producer Price Index for the Manufacturing sector in March 1994, with 1993 as reference period, but the coverage was then limited to the manufacture of "Food, beverages and tobacco". The scope of the index has now been extended to cover all relevant industry groups of the Non-EPZ manufacturing sector.

This issue of the "Economic and Social Indicators" presents the Producer Price Indices for the whole manufacturing sector from 1998 up to the first quarter of 2002, broken down by 14 divisions (2 digit level of the NSIC). Producer Price Indices for the Divisions 15 and 16, "Manufacture of food products, beverages and tobacco", have been further subdivided by product group level and are given separately in Tables 5 to 7.

2. Methodology

2.1 Scope

The PPI-M covers all large establishments (that is those employing 10 or more persons) whose output is mainly sold on the domestic market, that is divisions 15 to 37 of the National Standard Industrial Classification of Economic Activities (NSIC).

2.2 Weighting Scheme

The weights have been calculated from the gross output figures derived from the 1997 Census of Economic Activities. Gross output is valued at basic prices, and thus excludes all taxes on products, namely excise duties and value added tax. The weight of a product represents the share of its gross output of the total output of the manufacturing sector.

In the case of sugar, only the sale on the local market has been taken into consideration in establishing the weights.

2.3 Reference Year

The reference year for the calculation of price relatives is 1998. The base price for a particular product is the arithmetic mean of the 12 monthly prices in 1998.

2.4 Index Calculation

The PPI-M is calculated at the product level (5 digits NSIC). Indices at the Division level (2 digits NSIC) are then derived as a weighted average of the indices of the products falling within each division. Finally, the overall index for manufacturing is obtained as a weighted average of the Division indices.

The PPI is calculated according to a modified Laspeyre's formula which is the weighted average of price relatives.

$$I_c = \frac{\sum W_i * \left(\frac{P_{ci}}{P_{oi}}\right)}{\sum W_i} * 100$$

where I_c = Index for current month
 W_i = Weight associated with product i
 P_{ci} = Price of product i for the current month
 P_{oi} = Price for product i for the reference period (1998)

3. Producer Price Index: 1st Quarter 2002 (1998=100)

3.1 Monthly index

The overall Producer Price Index for Manufacturing stood at 113.1 in December 2001, increased successively by 0.7% in January, by 0.2% in February and by 0.1% in March 2002 to attain 114.2 (Table 1).

The sub-index for "Food products, beverages and tobacco", which carries 48.7% of the total weight, increased by 0.2% from December 2001 to 115.0 in January 2002, and kept this level in February and March.

The second major division is "Manufacture of chemicals and chemical products", which represents 11.6% of the total weight. The index for this sector went up by 1.7% in

January 2002 to 109.3, maintained this level in February, and rose further by 0.4% in March to reach 109.7.

A substantial increase of 15.9% was registered in the “Manufacture of textiles”, whose price index rose from 99.3 in December 2001 to 115.1 in January 2002. No change was thereafter registered. It is to be noted, however, that this division represents only 1.3% of the total weight.

The Producer Price Index of “Wearing apparel” went up by 3.3% from 108.9 in December 2001 to 112.4 in January 2002, and remained at this level up to March 2002.

The evolution of the monthly index by NSIC group for the period 1998 to 2001 is shown in Tables 2 and 3.

3.2 Quarterly Index

Table 4 gives the evolution of the Producer Price Index for Manufacturing on a quarterly basis, the quarterly index being computed as the arithmetic mean of the monthly indices. The index, which stood at 112.5 in the fourth quarter of 2001, rose to 114.1 during the first quarter of 2002. This 1.4% growth was mostly the overall effect of price increases of 15.9% for “Manufacture of textiles”, 3.3% for “Manufacture of wearing apparel”, 2.8% for “Manufacture of basic metals”, 1.8% for “Manufacture of chemicals and chemical products” and 1.7% for “Publishing, printing and reproduction of recorded media”.

Compared to the corresponding quarter of 2001, the overall index for the first quarter of 2002 went up by 5.2%, with increases in almost all the sectors with the exception of “Manufacture of fabricated metal products” and “Manufacture of electrical machinery and apparatus”, where no change was registered. Producer prices for the “Manufacture of food products, beverages and tobacco” were up by 5.3%. Other details on changes that have occurred at the division level are given in Table 4.
