

PRODUCER PRICE INDEX - MANUFACTURING (PPI-M)

4th Quarter 2003

1. Introduction

The Producer Price Index (PPI-M) measures changes in the effective selling prices received by producers for that part of their output which is sold on the domestic market. It reflects the price trends of a constant basket of goods, which represents the output of the selected industries.

The Central Statistics Office first published a Producer Price Index for the Manufacturing sector in March 1994, with 1993 as reference period, but the coverage was then limited to the manufacture of "Food, beverages and tobacco". The index has been revised in June 2002 to cover all relevant industry groups of the Non-EPZ manufacturing sector. However, figures according to this revision have been compiled since the base year, i.e. 1998.

This issue of the "Economic and Social Indicators" presents the Producer Price Indices for the whole manufacturing sector from 1998 to 2003, broken down by 14 divisions (2-digits level of the NSIC). Producer Price Indices for the Divisions 15 and 16, "Manufacture of food products, beverages and tobacco", have been further subdivided by product group level and are given separately in Tables 5 to 8. The methodology used for the calculation of the index is given in annex.

2. Producer Price Index: 4th Quarter 2003

2.1 *Monthly index*

The overall Producer Price Index, which stood at 121.9 in September 2003, increased successively by 1.2% in October, 0.1% in November and 0.4% in December to reach 123.9.

The rise in October was due to price increases in "Food, beverages and tobacco" (+2.2%), "Publishing, printing, etc." (+1.5%), "Manufacture of furniture, and manufacturing, n.e.c." (+1.2%) and "Manufacture of chemicals and chemical products" (+0.2%). These increases were partially offset by a 6.1% decrease in "Manufacture of textiles". The rise in the index for "Food, beverages and tobacco", the group which accounts for nearly 50% of the overall weight, was mainly the effect of price increases of food products (+1.2%) and beer (+14.4%).

In November, the index for "Food, beverages and tobacco" rose by a further 0.1%, mainly as a result of increases in the prices of dairy products (+2.5%). Increases were also noted in "Manufacture of chemicals and chemical products" (+0.4%) and in "Manufacture of furniture,

etc.” (+0.3%). A decrease of 0.1% was, however, noted in “Manufacture of paper and paper products”.

In December, the index for “Food, beverages and tobacco” rose further by 0.8%, mainly the effect of price increases of tobacco products. Prices in “Manufacture of furniture, etc.”, “Manufacture of chemicals and chemical products” and “Manufacture of paper and paper products” went up by 0.3%, 0.2% and 0.1% respectively.

The evolution of the monthly index by NSIC group for the period 1998 to 2002 is shown in Tables 2 and 3.

2.2 *Quarterly Index*

Table 4 gives the evolution of the Producer Price Index on a quarterly basis, the quarterly index being computed as the arithmetic mean of the monthly indices. The index, which stood at 121.2 in the third quarter of 2003, rose to 123.5 during the fourth quarter. This 1.9% growth was mostly the overall effect of price increases ranging from 0.6% in “Manufacture of fabricated metal products” to 3.3% in “Manufacture of other non-metallic mineral products”, and a decrease of 6.1% in “Manufacture of textiles”. The “Food, beverages and tobacco” product group with nearly 50% of the total weight witnessed price increases of 2.4%. Within the group, “Food products” went up by 1.1% and “Beverages and tobacco” by 4.2%. Other changes are shown in Table 8.

Compared to the corresponding quarter of 2002, the overall index for the fourth quarter of 2003 went up by 5.8%, with an increase of 7.2% in the index for “Food, beverages and tobacco”. Other significant increases are noted in “Tanning, dressing of leather, etc.” (+13.4%), “Manufacture of basic metals” (+13.3%), “Manufacture of other non-metallic mineral products” (+6.9%), and “Manufacture of chemicals and chemical products” (+4.4%). The only group that witnessed a decrease was “Manufacture of paper and paper products” (-0.1%). Within the “Food, beverages and tobacco” product group, significant increases are noted in the following sub-groups: “Beer” (+24.9%), “Manufacture of vegetable and animal oils and fats” (+18.0%) and “Manufacture of grain mill products” (+10.6%). Other details on changes that have occurred during that period are given in Tables 4 and 8.

ANNEX

Methodology used in the computation of the Producer Price Index (PPI-M)

1 Scope

The PPI-M covers all large establishments (that is those employing 10 or more persons) whose output is mainly sold on the domestic market, that is divisions 15 to 37 of the National Standard Industrial Classification of Economic Activities (NSIC).

2 Weighting Scheme

The weights have been calculated from the gross output figures derived from the 1997 Census of Economic Activities. Gross output is valued at basic prices, and thus excludes all taxes on products, namely excise duties and value added tax. The weight of a product group represents the share of its gross output out of the total output of the manufacturing sector.

In the case of sugar, only the sale on the local market has been taken into consideration in establishing the weights.

3 Reference Year

The reference year for the calculation of price relatives is 1998. The base price for a particular product is the arithmetic mean of the 12 monthly prices in 1998.

4 Index Calculation

The PPI-M is calculated at the 5-digits level of NSIC. Indices at the Division level (2 digits NSIC) are then derived as a weighted average of the indices of the products falling within each division. Finally, the overall index for manufacturing is obtained as a weighted average of the Division indices.

The PPI is calculated according to a modified Laspeyre's formula, which is the weighted average of price relatives.

$$I_c = \frac{\sum W_i * \left(\frac{P_{ci}}{P_{oi}}\right)}{\sum W_i} * 100$$

where I_c = Index for current month

W_i = Weight associated with product i

P_{ci} = Price of product i for the current month

P_{oi} = Price for product i for the reference period (1998)
