

## **Export Price Index - 4th Quarter 2004**

### TABLE OF CONTENTS:

Introduction

Table 1 - Quarterly Export Price Index by SITC1, 2003 - 2004 (Reference year: 2003=100)

Table 2 - Percentage change from previous period by SITC1, 1st Qr 2003 - 4th Qr 2004 (Reference year: 2003=100)

Table 3 - Percentage change from corresponding period by SITC1, 1st Qr 2003 - 4th Qr 2004 (Reference year: 2003=100)

Table 4 - Quarterly Export Price Index (EPI), 1998 - 2004

Technical Note

**Quarterly Export Price Index (EPI)**  
**4<sup>th</sup> Quarter 2004**  
**(Reference year: 2003=100)**

## **1. Introduction**

This issue of the Economic and Social Indicators presents quarterly Export Price Indices for the fourth quarter of 2004 and for the years 2003 and 2004.

The Export Price Index (EPI) provides an overall measure of pure price changes (in Mauritian rupees) of domestically produced goods exported to other countries. The weights used for the compilation of the index have been derived from domestic exports for 2002 while the year 2003 is used as reference year (i.e. 2003=100). A technical note on the construction of the EPI is annexed.

Table 1 presents quarterly indices by Standard International Trade Classification (SITC Rev 3). Percentage changes compared to previous quarters are shown in Table 2 while changes over corresponding quarters of the previous year are presented in Table 3.

## **2. Structure of the EPI**

The EPI covers five sections of the SITC, namely "Food and live animals", "Crude materials, inedible, except fuels", "Chemicals and related products", "Manufactured goods classified chiefly by material" and "Miscellaneous manufactured articles". Exports of goods falling under these sections covered 99% of domestic exports in reference year 2003. Distribution of weights for the different sections, groups of commodities and items are given in Table 1. In addition to the overall index, separate sub-indices are also given for different product categories.

## **3. Quarterly Changes (4<sup>th</sup> quarter 2004)**

During the fourth quarter of 2004, the EPI went up by 1.4% to reach 110.3, from 108.8 in the third quarter. Increases were, in fact, registered in export prices of goods falling under all sections. The index for "Miscellaneous manufactured articles", which carries about 67% of the total weight, increased by 1.8% and that of "Food and live animals", with 29% of the total weight, rose by 0.6%.

Compared to price levels in the corresponding quarter of 2003, the index showed an overall increase of 8.7%. This can be attributed mainly to increases of 10.5% in prices of "Miscellaneous manufactured articles" and 5.1% in those of "Food and live animals".

### **3.1 Sub-indices by section and commodity**

#### **Food and live animals**

During the fourth quarter of 2004, the sub-index for "Food and live animals", with 29% of the total weight, moved from 106.3 to 106.9, representing an increase of 0.6%. This can mostly be explained by a rise of 1.8% in the export price of "Fish and fish preparations".

When compared to the fourth quarter of 2003, the index for this section went up by 5.1%, mainly as a result of a 4.3% jump in the export price of sugar.

#### **Crude materials, inedible, except fuels**

The index for this section went up from 88.6 in the third quarter of 2004 to 90.3 in the fourth quarter, as a result of a 1.9% rise in the export price of fresh cut flowers. However, the index showed a decline of 12.2% when compared to the fourth quarter of 2003.

#### **Chemicals and related products**

A rise of 5.4% in the export price of fertilisers in the fourth quarter of 2004 has caused the sub-index for "Chemicals and related products" to move from 131.1 to 138.2. Compared to the corresponding quarter of 2003, the index registered an increase of 32.8%.

#### **Manufactured goods classified chiefly by material**

Export prices of goods in this section, which consists mainly of textile fabrics, went up by 1.4%, the index moving from 99.1 in the third quarter of 2004 to 100.5 in the fourth quarter. The export prices of "Textile yarn and fabrics", the major component of this section, showed an increase of 0.4%.

Compared to the fourth quarter of 2003, the index increased marginally by 0.9%, being mainly the outcome of a 9.6% rise in prices of "Non-metallic mineral manufactures", mitigated by a one percent fall in prices of "Textile yarn and fabrics".

#### **Miscellaneous manufactured articles**

This is the most important section of the index as it carries about 67% of the total weight. It consists mostly of articles of wearing apparel from the Export Processing Zone (EPZ).

The index for this section showed an increase of 1.8%, going up from 110.3 in the third quarter of 2004 to 112.3 in the fourth quarter. Export prices of "Articles of apparel and clothing accessories", accounting for 98% of the weight for this section, rose by 1.6% and those of "Optical goods, watches and clocks" by 6.0%.

Compared to the fourth quarter of 2003, the index went up by 10.5% following increases of 10.4% in prices of "Articles of apparel and clothing accessories" and 17.1% in "Optical goods, watches and clocks".

## **Technical Note**

### **Export Price Index (EPI)**

#### **Methodology for the Construction of the EPI**

##### **Definition**

The Export Price Index (EPI) is a measure of price change of domestically produced Mauritian products shipped to other countries, i.e it excludes re-exports. In addition to the overall index, separate sub-indices are also calculated for different product categories at more detailed level.

The first series of EPI was calculated with the year 1993 as base and reference period. The index was first revised in 1997 and subsequently revised in 2003.

##### **Comparison with Unit Value Index**

The Unit Value Export Index provides only a proxy measure for price changes of exported goods. It is derived from value and quantity data of products or groups of products obtained from trade returns and is thus highly dependent on the degree of homogeneity of the groups of products considered. On the other hand, the EPI measures pure price changes and is based on actual price measurements of relatively more homogeneous group of products. It requires elaborate specifications of products and takes into account all the main price determining factors such as country of destination, quality, mode of transport and mode of payment.

##### **Scope and Classification**

The EPI covers all domestic exports, the most important commodities being sugar and textile fabrics and articles of apparel and clothing accessories produced by the EPZ sector.

The index is based on the Nomenclature of the Standard International Trade Classification of the United Nations (SITC Rev 3). Separate sub-indices are produced for each SITC section and for more detailed groups where possible.

### **Selection of Items and Firms**

A representative sample of 38 firms has been selected from trade declarations submitted to the Customs and Excise Department in 2002. The sample was drawn from exporting firms on the basis of regularity of their trade and their volume of exports. A total of 80 items (Entry Level Items, ELI's) which represent 36 products are priced from the selected enterprises.

### **Weighting Scheme**

The weights are derived from the 2002 domestic exports. Weights assigned to each section and group are based on their export values in 2002. Each product or group of products selected for pricing purposes represents all products that fall within that weight group.

### **Base and Reference Period**

The base period for the EPI is calendar year 2002 and the reference period 2003. Bench mark data for the year 2002, based on trade returns, have been used to derive weights. The selected firms have supplied prices of selected commodities for each of the 12 months in 2003. The yearly average price of each product has then been worked out and is used as base price for that product.

### **Price Collection**

Prices are collected directly from co-operating export firms. As far as possible price quotations are reported on a free on board (F.O.B.) basis and are mostly contract prices. Each reporting firm is visited once every quarter but prices are supplied on a monthly basis and are averaged for each quarter.

### **Sugar and Molasses**

Due to their specificity, sugar and molasses have been treated differently. Sugar and molasses produced during a crop year, which normally extends between July and June of the following year, are usually exported during that same crop year. Export prices of these commodities, sugar in particular, are mostly negotiated prices. These prices can be quite volatile between quarters depending on the destination of the shipments. Therefore, in order to eliminate these price distortions between quarters, the same average yearly price for the crop year is used for the four quarters comprising that crop year. The base price of these commodities for the year 2003 is the average price for crops years 2002/03 and 2003/04.

### **Calculation of the EPI**

A modified Laspeyres formula based on the weighted average of price relatives is used to calculate the EPI: the mathematical form of the formula is shown below:

$$I_{ot} = \frac{\sum w_i \times \frac{P_{it}}{P_{io}} \times 100}{\sum w_i}$$

Where  $I_{ot}$  is the index for period t compared to base period 0

$w_i$  is the weight of the  $i^{\text{th}}$  element

$P_{io}$  is the base price of the  $i^{\text{th}}$  element

$P_{it}$  is the price of the  $i^{\text{th}}$  element in period t

$\frac{P_{it}}{P_{io}}$  is the price relative of the  $i^{\text{th}}$  element  
in period t relative to base period 0

$\Sigma$  means summation over all selected elements

### **Uses**

The primary use of the EPI is to deflate export trade statistics. It provides quarterly measures of price trends of Mauritian products sold abroad and can be used for calculating changes in the volume of exports.

It can also serve as a basis to assess the competitiveness of Mauritian products in relation to price trends of common products of other countries with which Mauritius competes for markets.
