PRODUCER PRICE INDEX - MANUFACTURING (PPI-M)

4th Quarter 2004

1. Introduction

The Producer Price Index (PPI-M) measures changes in the effective prices received by producers for that part of their output, which is sold on the domestic market. It reflects the price trends of a constant basket of goods which represent the output of the selected industries.

The Central Statistics Office first published a Producer Price Index for the Manufacturing sector (Non-EPZ) in March 1994, with 1993 as reference period, but the coverage was then limited to the "Manufacture of food products, beverages and tobacco". The index has been revised in June 2002 to cover all relevant industry groups of the Non-EPZ manufacturing sector. However, figures according to this revision have been compiled since the base year, i.e. 1998.

This issue of the "Economic and Social Indicators" presents the Producer Price Indices for the manufacturing sector from 1998 to 2004, broken down by 14 Divisions (2-digits level of the National Standard Industrial Classification of Economic Activities, NSIC). Producer Price Indices for the Divisions 15 and 16, "Manufacture of food products, beverages and tobacco", have been further subdivided by product group level and are given separately in Tables 5 to 8. Table 9 summarises the monthly indices for the manufacturing sector and Table 10, monthly sub-indices for the group "Manufacture of food products, beverages and tobacco". The methodology used for the calculation of the index is given in annex.

2. Producer Price Index: (Year 1998 = 100)

2.1 Monthly index

The Producer Price Index, which stood at 132.9 in September 2004, increased successively by 0.4% in October, 0.3% in November and 0.2% in December to reach 134.1 (Table 1).

The 0.4% rise in the overall index in October was mainly due to increases in the sub-indices for "Manufacture of chemicals and chemical products" (+0.4%), "Manufacture of rubber and plastic products" (+5.2%) and "Manufacture of wearing apparel" (+9.5%). These increases were partially offset by a 0.1% decrease in "Manufacture of food products, beverages and tobacco" together with a decrease of 0.6% in "Manufacture of wood, wood products and cork except furniture". The decrease in the sub-index for "Food products, beverages and tobacco", which accounts for nearly 50% of the overall weight, was the effect of price decreases of grain mill products (-4.8%) partially offset by increases in the prices of vegetable and animal oils and fats (+0.6%), bakery products (+1.6%), fish and fish products (+4.0%) and wine (+6.1%).

In November, the overall index increased by 0.3% as a result of increases in the sub-indices of "Food products, beverages and tobacco" (+0.6%), "Manufacture of furniture, etc." (+0.1%) and "Tanning, dressing of leather, manufacture of luggage, handbags, etc." (+0.5%). Within "Food products, beverages and tobacco" prices of spirits increased by +7.0% whilst those of grain mill products and other food products fell by 0.9% and 0.6% respectively.

In December, a 0.2% increase was registered in the overall index. The sub-index for "Food, beverages and tobacco" rose further by 0.5%, mainly the effect of price increases of prepared animal feeds (+3.8%) and dairy products (+2.4%). Prices of products in "Manufacture of fabricated metal

products”, “Manufacture of furniture, etc.” and “Tanning, dressing of leather, manufacture of luggage, handbags, etc.” went up by 0.4%, 0.2% and 1.5% respectively. A decrease of 3.2% was, however, noted in “Manufacture of rubber and plastic products”.

The evolution of the monthly index by NSIC group for the period 1998 to 2003 is shown in Tables 2, 3, 6 and 7.

2.2 *Quarterly Index*

Table 4 gives the evolution of the Producer Price Index on a quarterly basis, the quarterly index being computed as the arithmetic mean of the monthly indices. The index, which stood at 132.1 in the third quarter of 2004, rose to 133.7 during the fourth quarter. This 1.2% growth was mainly due to increases in the prices of food products, beverages and tobacco (+1.0%) and chemicals and chemical products (+2.3%). Within “Food products, beverages and tobacco”, the sub-index for “Food products” went up by 0.7% whilst that for “Beverages and tobacco” rose by 1.4%. Other changes are shown in Table 8.

Compared to the corresponding quarter of 2003, the overall index for the fourth quarter of 2004 went up by 8.3%, with an increase of 8.8% in the sub-index for “Food, beverages and tobacco”. Other significant increases were registered in the following industry groups: “Manufacture of chemicals and chemical products” (+8.4%), “Publishing, printing and reproduction of recorded media” (+3.3%), “Manufacture of fabricated metal products” (+10.8%) and “Manufacture of basic metals” (+39.6%). The only industry group that registered a decrease was “Manufacture of paper and paper products” (-0.9%).

Within “Manufacture of food products, beverages and tobacco”, “Manufacture of food products” increased by 10.1% and “Manufacture of beverages and tobacco” by 7.2%. At a more detailed level, significant increases were noted in the prices of prepared animal feeds (+14.7%), beer (+16.5%) and grain mill products (+22.6%). Other details on changes that have occurred during that period are given in Tables 4 and 8.

ANNEX

Methodology used in the computation of the Producer Price Index (PPI-M)

1 Scope

The PPI-M covers all large establishments (that is those employing 10 or more persons) whose output is mainly sold on the domestic market, that is divisions 15 to 37 of the National Standard Industrial Classification of Economic Activities (NSIC).

2 Weighting Scheme

The weights have been calculated from the gross output figures derived from the 1997 Census of Economic Activities. Gross output is valued at basic prices, and thus excludes all taxes on products, namely excise duties and value added tax. The weight of a product group represents the share of its gross output out of the total output of the manufacturing sector.

In the case of sugar, only the sale on the local market has been taken into consideration in establishing the weights.

3 Reference Year

The reference year for the calculation of price relatives is 1998. The base price for a particular product is the arithmetic mean of the 12 monthly prices in 1998.

4 Index Calculation

The PPI-M is calculated at the 5-digits level of NSIC. Indices at the Division level (2 digits NSIC) are then derived as a weighted average of the indices of the products falling within each division. Finally, the overall index for manufacturing is obtained as a weighted average of the Division indices.

The PPI is calculated according to a modified Laspeyre's formula, which is the weighted average of price relatives.

$$I_c = \frac{\sum W_i * \left(\frac{P_{ci}}{P_{oi}}\right)}{\sum W_i} * 100$$

where I_c = Index for current month

W_i = Weight associated with product i

P_{ci} = Price of product i for the current month

P_{oi} = Price for product i for the reference period (1998)
