

Quarterly Export and Import Price Indices 4th Quarter 2006 (Reference year: 2003=100)

1. Introduction

The Export Price Index (EPI) provides an overall measure of pure price changes (in Mauritian rupees) of domestically produced goods exported to other countries. The Import Price Index (IPI), on the other hand, measures price changes of goods purchased from other countries (excluding Freeport activities). The weights used for the compilation of the indices have been derived from trade data for the year 2002 while the year 2003 is used as reference year (i.e. 2003=100). Details on the construction of the EPI and IPI are annexed.

2. Terms of trade (reference year: 2003 = 100)

The Terms of trade is the ratio of export price index to import price index. A rise in this ratio indicates that the terms of trade have moved in favour of Mauritius. During the fourth quarter of 2006, export prices rose by 2.2% and import prices were up by 3.4%. Consequently the terms of trade index, fell by one percentage point to reach 80.

3. Domestic exports, 2006

During the year 2006 domestic exports stood at Rs 47,737 million, representing an increase of around 13% in nominal terms compared to those of 2005 (Table 2). This increase was explained by a rise of 6% in prices accompanied by an expansion of 7% in volume.

4. Imports, 2006

Compared to the year of 2005, total imports (excluding aircraft and transactions of the Freeport) went up by 17% to reach Rs 94,687 million (Table 3). After allowing for price increases of 13%, imports grew by 4% in volume.

5. Export Price Index (EPI) (Tables 4-7)

5.1 Structure of the EPI

The EPI covers five sections of the SITC, namely “Food and live animals”, “Crude materials, inedible, except fuels”, “Chemicals and related products”, “Manufactured goods classified chiefly by material” and “Miscellaneous manufactured articles”. Exports of goods falling under these sections covered 99% of domestic exports in reference year 2003. Distribution of weights for the different sections, groups of commodities and items are given in Table 4. In addition to the overall index, separate sub-indices are also given for different product categories.

5.2 Changes in Export Price Index (4th quarter 2006)

5.2.1 Overall Index

During the fourth quarter of 2006, the EPI increased by 2.2% to reach 123.3, from 120.6 in the third quarter.

Compared to price levels in the corresponding quarter of 2005, the index was up by 7.0%. Increases were registered in export prices of all SITC sections except “Chemicals and related products, n.e.s. (-1.0%).

5.2.2 Sub-indices by section and commodity

Section 0: Food and live animals

During the fourth quarter of 2006, the sub-index for “Food and live animals” representing 29% of the total weight, remained at previous quarter’s level (121.8). A slight decrease in the price of “Fish and fish preparations” (-0.5%) was offset by price increases in cereals and cereal preparations (+5.0%) and feeding stuff of animals (+2.4%).

When compared to the fourth quarter of 2005, the index for this section was higher by 1.1%, explained mainly by the joint effect of an increase of 10.6% in prices of "Fish and fish preparations" and a drop of 1.4% in those of sugar.

Section 2: Crude materials, inedible, except fuels

The index for this section went up from 109.8 in the third quarter of 2006 to 110.4 in the fourth quarter, following a rise in the export price of fresh cut flowers.

When compared to the corresponding quarter of 2005, the index was 15.6% higher.

Section 5: Chemicals and related products

The export price indices for this section remained at the same level of 129.1 at all quarters of 2006.

However, the index showed a decrease of 1% when compared to the corresponding quarter of 2005.

Section 6: Manufactured goods classified chiefly by material

During the fourth quarter of 2006, the export prices of goods in this section, which consists mainly of textile fabrics, went up by 1.1%, moving up from 107.1 in the third quarter of 2006 to 108.3 in the fourth quarter. The export prices of "Textile yarn and fabrics", the most important component of this section, rose by 0.4 %. Increase in prices was also noted in all the other subgroups.

Compared to the corresponding quarter of 2005, the index was up by 3.8% with a 1.1% increase noted in prices of "Textile yarn and fabrics".

Section 8: Miscellaneous manufactured articles

This is the most important section of the index as it carries about 67% of the total weight. It consists mostly of articles of wearing apparel from enterprises formerly holding EPZ certificate.

The index for this section rose by 3.3%, from 120.7 in the third quarter of 2006 to 124.7 in the fourth quarter. Export prices of "Articles of apparel and clothing accessories", accounting for 98% of the weight for this section, increased by 3.3% while those of "Optical goods, watches and clocks" rose 3.0%.

Compared to the fourth quarter of 2005, the index went up by 10.0% following increases of 9.6% in prices of "Articles of apparel and clothing accessories" coupled with a 29.2% increase in those of "Optical goods, watches and clocks".

6. Import Price Index (IPI) (Tables 8 - 12)

6.1 Structure of the IPI

The IPI covers eight out of the 10 Standard International Trade Classification (SITC, Rev. 3) sections, namely “Food and live animals”, “Crude materials, inedible, except fuels”, “Mineral fuels, lubricants and related materials”, “Animal and vegetable oils, fats and waxes”, “Chemical materials and related products, n.e.s”, “Manufactured goods classified chiefly by materials”, “Machinery and transport equipment” and “Miscellaneous manufactured articles”.

The two SITC sections not covered are “Beverages and tobacco” and “Commodities and transactions not classified elsewhere”. Goods in these sections represented only one per cent of all imports in 2002. They are not included because of the heterogeneity of the products and the inherent difficulties in pricing the items to a constant quality.

Thus, the index, either directly or indirectly, covers about 99% of merchandise imported during 2002. Sixty one per cent of the items are directly represented; of those items which are not directly represented, the prices are considered to move similarly to those represented directly.

6.2 Changes in Import Price Index – 4th quarter 2006

6.2.1 Overall Index

The Import Price Index (IPI) for the fourth quarter of 2006 went up by 3.4% to reach 153.3 in the fourth quarter from 148.3 in the previous quarter. Increases were registered in the price indices of the four major sections, namely: “Manufactured goods classified chiefly by material” (+3.3%), “Mineral fuels, lubricants and related materials” (+0.5%), “Food and live animals” (3.1%), and “Machinery and transport equipment” (4.6%).

Compared to the corresponding period of 2005, the index moved up by 15.5%, resulting mostly from increases of 10.0% in prices of “Manufactured goods classified chiefly by material”, 18.0% in those of “Mineral fuels, lubricants and related material”, 25.8% in those of “Food and live animals” and 12.9% in those of “Machinery and transport equipment”.

6.2.2 Sub-indices by SITC section and division

Section 0: Food and live animals

The index for the section “Food and live animals”, representing about 16% of total weight, went up by 3.1%, from 152.4 in the third quarter of 2006 to 157.1 in the fourth quarter. During the fourth quarter, import prices of goods falling under all divisions of this section have registered increases ranging between 0.3% and 6.8%, with the highest increase recorded in the division “Vegetables and fruits”.

Compared to the fourth quarter of 2005, the index went up by 25.8%, with an

important rise of 91.7% in prices of “Fish and fish preparations”.

Section 2: Crude materials, inedible, except fuels

The index for “Crude materials, inedible, except fuels” (about 2% of total weight) registered an increase of 2.2% from 149.5 in the third quarter of 2006 to 152.9 in the fourth quarter, as a result of increases in import prices of “Cork and wood” (+3.6%) and Textile fibres and their wastes” (+1.0%).

Compared to the corresponding period of last year, the index went up by 12.2%, being the combined effect of a 10.9% increase in prices of “Cork and wood” and a 13.2% rise in those of “Textile fibres and their wastes”

Section 3: Mineral fuels, lubricants and related materials

The index for the section “Mineral fuels, lubricants and related materials” with nearly 18% of the total weight, increased marginally (+0.6%) during the fourth quarter of 2006 to reach 223.3. This was due to unchanged import prices of petroleum and petroleum products, which account for 87% of the weight for this section.

When compared to the fourth quarter of 2005, the index shows a significant increase of 18.0%, owing to an 18.9% rise in prices of petroleum and petroleum products.

Section 4: Animal and vegetable oils, fats and waxes

During the fourth quarter of 2006, the section “Animal and vegetable oils, fats and waxes” which covers about one per cent of the total weight stood at 135.9, i.e. an increase of 18.1% compared to the third quarter.

When compared to the corresponding quarter of 2005, the index went up by 18.9%.

Section 5: Chemical materials and related products, not elsewhere specified (n.e.s)

The index “Chemical materials and related products, n.e.s” (about 5% of total weight) rose by 4.3% in the fourth quarter of 2006 to reach 130.1. During this quarter, all divisions of this section registered increase in import prices: “Medical and pharmaceutical products” (+3.9%), “Chemical materials and products, n.e.s” (+4.6%), and “Essential oils and perfume materials, etc.” (+4.8%).

The index increased by 14.0% as compared to the corresponding period of the previous year.

Section 6: Manufactured goods classified chiefly by material

This is the most important section, carrying about 38% of the total weight. In the fourth quarter of 2006 the index stood at 134.7, showing an increase of 3.3% over the previous quarter. Import prices of “Textile yarn, fabrics, made-up-articles n.e.s”, accounting for 69% of the weight of this section, rose by 3.1%.

When compared to the fourth quarter of 2005, the index shows a rise of 10.0% with price increases in all divisions of this section.

Section 7: Machinery and transport equipment

The index of “Machinery and transport equipment” with 11% of total weight reached 124.0 in the fourth quarter of 2006, which represents an increase of 4.6% over the previous quarter. Import prices of goods of all divisions of this section registered increases as follows: “Road vehicles” (+4.2%), “Telecommunications and sound recording and reproducing apparatus” (+5.6%), “Office machines and automatic data processing machines” (+4.3%) and General industrial machinery and equipment” (+4.2%).

Compared to the corresponding quarter of 2005, the index went up by 12.9%. This rise was attributable to price increases in all divisions and in particular, “Road vehicles” (+11.5%), “Telecommunications and sound recording and reproducing apparatus” (+16.9%), “Office machines and automatic data processing machines” (+13.5%), and “General industrial machinery and equipment” (+12.2 %).

Section 8: Miscellaneous manufactured articles

The index for “Miscellaneous manufactured articles” was up by 11.4% from 122.4 in the third quarter of 2006 to reach 136.3 in the fourth quarter. The index was mainly affected by an increase of 5.0% in import prices of goods classified in the division “Miscellaneous manufactured articles, n.e.s” which accounts for 80% of the weights in this section.

When compared to the fourth quarter of 2005, the index rose by 16.4% as a result of increases in import prices of “Miscellaneous manufactured articles, n.e.s” (+8.9%) and “Professional, scientific instruments”(51.1%).

Technical Note

Export Price Index (EPI)

Methodology for the Construction of the EPI

Definition

The Export Price Index (EPI) is a measure of price change of domestically produced Mauritian products shipped to other countries, i.e it excludes re-exports. In addition to the overall index, separate sub-indices are also calculated for different product categories at more detailed level.

The first series of EPI was calculated with the year 1993 as base and reference period. The index was first revised in 1997 and subsequently revised in 2003.

Comparison with Unit Value Index

The Unit Value Export Index provides only a proxy measure for price changes of exported goods. It is derived from value and quantity data of products or groups of products obtained from trade returns and is thus highly dependent on the degree of homogeneity of the groups of products considered. On the other hand, the EPI measures pure price changes and is based on actual price measurements of relatively more homogeneous group of products. It requires elaborate specifications of products and takes into account all the main price determining factors such as country of destination, quality, mode of transport and mode of payment.

Scope and Classification

The EPI covers all domestic exports, the most important commodities being sugar and textile fabrics and articles of apparel and clothing accessories produced by the EPZ sector.

The index is based on the Nomenclature of the Standard International Trade Classification of the United Nations (SITC Rev 3). Separate sub-indices are produced for each SITC section and for more detailed groups where possible.

Selection of Items and Firms

A representative sample of 38 firms has been selected from trade declarations submitted to the Customs and Excise Department in 2002. The sample was drawn from exporting firms on the basis of regularity of their trade and their volume of exports. A total of 80 items (Entry Level Items, ELI's) which represent 36 products are priced from the selected enterprises.

Weighting Scheme

The weights are derived from the 2002 domestic exports. Weights assigned to each section and group are based on their export values in 2002. Each product or group of products selected for pricing purposes represents all products that fall within that weight group.

Base and Reference Period

The base period for the EPI is calendar year 2002 and the reference period 2003. Bench mark data for the year 2002, based on trade returns, have been used to derive weights. The selected firms have supplied prices of selected commodities for each of the 12 months in 2003. The yearly average price of each product has then been worked out and is used as base price for that product.

Price Collection

Prices are collected directly from co-operating export firms. As far as possible price quotations are reported on a free on board (F.O.B.) basis and are mostly contract prices. Each reporting firm is visited once every quarter but prices are supplied on a monthly basis and are averaged for each quarter.

Sugar and Molasses

Due to their specificity, sugar and molasses have been treated differently. Sugar and molasses produced during a crop year, which normally extends between July and June of the following year, are usually exported during that same crop year. Export prices of these commodities, sugar in particular, are mostly negotiated prices. These prices can be quite volatile between quarters depending on the destination of the shipments. Therefore, in order to eliminate these price distortions between quarters, the same average yearly price for the crop year is used for the four quarters comprising that crop year. The base price of these commodities for the year 2003 is the average price for crops years 2002/03 and 2003/04.

Calculation of the EPI

A modified Laspeyres formula based on the weighted average of price relatives is used to calculate the EPI: the mathematical form of the formula is shown below:

$$I_{ot} = \frac{\sum w_i \times \frac{P_{it}}{P_{io}} \times 100}{\sum w_i}$$

Where I_{ot} is the index for period t compared to base period 0

w_i is the weight of the i^{th} element

P_{io} is the base price of the i^{th} element

P_{it} is the price of the i^{th} element in period t

$\frac{P_{it}}{P_{io}}$ is the price relative of the i^{th} element
in period t relative to base period 0

Σ means summation over all selected elements

Uses

The primary use of the EPI is to deflate export trade statistics. It provides quarterly measures of price trends of Mauritian products sold abroad and can be used for calculating changes in the volume of exports.

It can also serve as a basis to assess the competitiveness of Mauritian products in relation to price trends of common products of other countries with which Mauritius competes for markets.

Import Price Index (IPI)

Methodology for the Construction of the IPI

1. Definition

The Import Price Index (IPI) provides an overall measure of pure price changes (in Mauritian Rupees) of goods imported into the country.

Unlike Unit Value Import Index which is affected by product mix and country of imports, the IPI is based on actual price measurements of a fixed basket of imported goods. It requires elaborate specifications of products and takes into account all the main price determining factors such as country of origin and quality.

2. Scope and Classification

The commodities are classified according to the United Nations Standard International Trade Classification (SITC Rev 3). Under this nomenclature, commodities are classified under 3,118 basic headings arranged into 261 groups. These groups are, in turn, assembled into 67 divisions designed to summarise the groups according to their broader characteristics. The divisions are finally consolidated into 10 sections.

Sub-indices are produced for each SITC section and for more detailed groups where possible.

The Import Price Index covers eight out of the 10 SITC sections, namely “Food and live animals”, “Crude materials, inedible, except fuels”, “Mineral fuels, lubricants and related materials”, “Animal and vegetable oils, fats and waxes”, “Chemical materials and related products, n.e.s”, “Manufactured goods classified chiefly by materials”, “Machinery and transport equipment” and “Miscellaneous manufactured articles”.

The two SITC sections not covered are “Beverages and tobacco” and “Commodities and transactions not classified elsewhere”. Goods in these sections represent a low one per cent of all imports in 2002. They are not included because of the heterogeneity of the products and the inherent difficulties in pricing the items to a constant quality.

Thus, the index, either directly or indirectly, covers about 99% of the value of merchandise imported during 2002. Items directly represented constitute 61% of the total value of imports, and for those items which are not directly represented, their prices are considered to move similarly to those represented directly.

3. Weighting scheme

The weights were derived from total imports in 2002. Weights assigned to each section and group are based on their import values in that year. Each product or group of products selected for pricing purposes represents all products that fall within that weight group.

4. Reference Period

The base price for the calculation of the indices refers to calendar year 2003 to be in line with the reference period used for the Export Price Index. The firms have supplied prices of selected commodities for each quarter in 2003. The yearly average price of each product has been used as base price for that product.

5. Selection of items and firms

The commodities forming the basket were selected according to the following criteria:

- (i) As far as possible, an item is included if it is imported regularly and frequently
- (ii) The items selected had to be, to a large extent, representative of the bulk of the trader's import
- (iii) There must be a sustained demand of the commodity variety
- (iv) Items had to be specific and detailed enough for pricing.

Similarly, an importer for a particular product is selected provided that he imports that product on a regular basis.

At the end of the selection process, 171 importers and 142 commodities were selected for subsequent price collection.

6. Price collection

There are two common practices for the collection of prices of items falling in the basket. Prices for the specified goods are collected each month from importers and average quarterly prices are then derived for compiling the index, or, in case where most imports occur at intervals longer than a month, prices are collected only once every quarter and refer to the last consignment. A preliminary survey of the importers has shown that, in the case of Mauritius, the second practice is more suitable.

Prices are reported on a cost, insurance and freight (c.i.f) basis and are expressed in Mauritian Rupees. Exchange rates from the Customs and Excise Department are used in case prices are reported in foreign currencies.

Though the frequency of imports has been taken into consideration in selecting items and importers, it may happen that some items in the basket have not been imported during a certain period. In such cases, the prices are estimated using the variations in the exchange rate of the currency of imports. The underlying assumption is that the only factor affecting the price is the value of the Mauritian Rupee relative to the transaction currency.

7. Uses of the Import Price Index

The Import Price Index is an important economic indicator which is used, inter alia, to:

- measure changes in prices of imports
- analyse the effect of import price changes on the various sectors of the economy
- calculate changes in the volume of imports
- calculate the terms of trade (that is the ratio of export prices to import prices)
- analyse the effect of exchange rates on import prices.

8. Calculation of the IPI

The compilation of the Import Price Index involves first the derivation of weighted averages through the four levels of the SITC, namely item, group, division and section as follows:

(a) Commodity item level

The price relative of each item forms the most basic level for the compilation of higher aggregate indices:

$$\text{Price index at commodity level: } I_{it} = \frac{\sum P_{it}}{\sum P_{io}} \times 100$$

where I_{it} is the price relative of the i^{th} commodity in period t relative to the base period

- $\sum P_{it}$ is the sum of the prices of all commodity varieties imported in period t
- $\sum P_{io}$ is the sum of the prices of all commodity varieties imported in the base period

(b) Group level

The group index is derived as a weighted average of the commodity indices:

$$\text{Price index at group level: } I_{G(j)} = \frac{\sum W_i I_{it}}{\sum W_i}$$

where $I_{G(j)}$ is the index for group j
 W_i is the weight of commodity i

(c) Division level

Similarly a weighted average of the group indices yields the index at division level:

$$\text{Price Index at division level: } I_{D(k)} = \frac{\sum W_j I_{G(j)}}{W_j}$$

where $I_{D(k)}$ is the index for division k
 W_j is the weight of group j

(d) Section level

The index at the division level is then derived as a weighted average of the indices of the divisions falling within that section.

$$\text{Price index at section level: } I_{s(l)} = \frac{\sum W_k I_{D(k)}}{\sum W_k}$$

where $I_{s(l)}$ is the index for section k
 W_k is the weight of group k

(e) Overall index

Finally, the overall Import Price Index is computed as a weighted average of the indices of the sections.

$$\text{Overall Import Price index: } I_{o(m)} = \frac{\sum W_m I_{s(l)}}{\sum W_m}$$

where $I_{o(m)}$ is the overall Price Index
 W_m is the weight of section m
