

# PRODUCER PRICE INDEX - MANUFACTURING (PPI-M)

## 1st Quarter 2007

### 1. Introduction

The Producer Price Index (PPI-M) measures changes in the effective prices received by producers of the Manufacturing sector (excluding establishments formerly operating with Export Enterprise Certificate) for that part of their output, which is sold on the domestic market. It reflects the price trends of a constant basket of goods, representative of the output of these manufacturing industries.

This issue of the "Economic and Social Indicators" presents a series of PPI-M from 2003 to March 2007, broken down by 16 Divisions (2-digits level of the National Standard Industrial Classification of Economic Activities, NSIC) with weights based on the results of the 2002 Census of Economic Activities, and using year 2003 as base period. Indices for the Divisions 15 and 16, "Manufacture of food products, beverages and tobacco", have been further subdivided by product group and are given separately in Tables 5 to 8. Tables 9 and 10 present the monthly indices as well as the quarterly and yearly averages for the manufacturing sector and the group "Manufacture of food products, beverages and tobacco" respectively. The methodology used for the calculation of the index is given in annex.

### 2. Producer Price Index (Year 2003 = 100)

#### 2.1 Monthly index

The Producer Price Index, which stood at 134.3 in December 2006 increased by 3.2% to 138.6 in March 2007 following increases of 1.6% in January, 1.0% in February and 0.6% in March (Table 1).

The 1.6% increase registered in January was mainly the effect of increases in the sub-indices of "Manufacture of food products, beverages and tobacco" (+2.7%), "Manufacture of fabricated metal products" (+1.3%) and "Manufacture of other non-metallic mineral products" (+2.2%). The increase in the sub-index of "Food products, beverages and tobacco", which accounts for nearly 50% of the overall weight, was mainly the effect of price increases of vegetable and animal oils and fats (+21.9%), meat and meat products (+3.0%), and distilling, blending & bottling of spirit (+7.5%).

The 1.0% rise in the overall index in February was mainly due to increases in the sub-indices of "Manufacture of food products, beverages and tobacco" (+1.0%), and "Manufacture of fabricated metal products" (+6.1%). The 1.0% increase in the sub-index of "Manufacture of food products, beverages and tobacco" was mainly the result of higher prices of meat and meat products (+5.7%) and fish and fish products (+2.7%).

In March, the index increased by 0.6% mostly due to increases in the sub-indices of "Manufacture of food products, beverages and tobacco" (+0.8%) and "Manufacture of chemicals and chemical products" (+1.3%). Higher prices of meat and meat products (+3.5%) and dairy products (+3.4%) contributed mostly to the increase in the sub-index of "Manufacture of food products, beverages and tobacco".

The evolution of the monthly index by NSIC group for the period 2003 to 2006 is shown in Tables 2, 3, 6 and 7.

## 2.2 Quarterly Index

Table 4 gives the evolution of the Producer Price Index on a quarterly basis, the quarterly index being computed as the arithmetic mean of the monthly indices. The index, which worked out to 132.4 in the fourth quarter of 2006, increased by 4.0%, to reach 137.7 in the first quarter of 2007. This 4.0% growth was mainly due to increases in the sub-indices of "Manufacture of food products, beverages and tobacco" (+5.2%), and "Manufacture of fabricated metal products" (+8.6%).

Within "Food products, beverages and tobacco", "Food products" rose by 7.0%, mostly explained by higher prices of vegetable oils and fats (22.6%), meat and meat products (+9.3%), and prepared animal feeds (+9.2%), whilst "Beverages and tobacco" went up by 1.6% due to higher prices of spirits (+7.5%). Details of changes are shown in Table 8.

Compared to the corresponding quarter of 2006, the overall index for the first quarter of 2007 went up by 13.3%. This was mainly due to increases in the sub-indices of "Manufacture of food, beverages and tobacco" (+13.4%), "Manufacture of fabricated metal products" (+28.0%), "Publishing, printing and reproduction of recorded media" (+14.8), and "Manufacture of other non-metallic mineral products" (+10.2%).

Within "Manufacture of food products, beverages and tobacco", "Food products" increased by 17.0% and "Beverages and tobacco" went up by 6.5%. At a more detailed level, increases were noted in the prices of meat and meat products (+14.9%), prepared animal feeds (+29.4%), bakery products (+17.6%), grain mill products (+10.5%), vegetable and animal oils and fats (+30.6%), tobacco (+15.4%) and beer (+14.2%). Other details on changes that have occurred during that period are given in Tables 4 and 8.

## ANNEX

### Methodology used in the computation of the Producer Price Index (PPI-M)

#### 1. Scope

The PPI-M covers all large manufacturing establishments (that is those employing 10 or more persons) falling in divisions 15 to 37 of the National Standard Industrial Classification of Economic Activities (NSIC), whose output is mainly sold on the domestic market.

#### 2. Weighting Scheme

The weights have been calculated from the gross output figures derived from the 2002 Census of Economic Activities. Gross output is valued at basic prices, and thus excludes all taxes on products, namely excise duties and value added tax. The weight of a product group represents the share of its gross output out of the total output of the sector.

In the case of sugar, only the sale on the local market has been taken into consideration in establishing the weights.

#### 3. Price collection

Prices collected refer to the prices received by producers for the sale of their products on the local market. The prices exclude all taxes on products, namely excise duty and value added tax.

Selected industries are visited on a quarterly basis, but prices are collected for each month of the quarter.

#### 4. Reference Year

The reference year for the calculation of price relatives is 2003. The base price for a particular product is the arithmetic mean of the 12 monthly prices in 2003.

#### 5. Index Calculation

The PPI-M is calculated at the 5-digits level of NSIC. Indices at the Division level (2 digits NSIC) are then derived as a weighted average of the indices of the products falling within each division. Finally, the overall index for manufacturing is obtained as a weighted average of the Division indices.

The PPI is calculated according to a modified Laspeyre's formula, which is the weighted average of price relatives.

$$I_c = \frac{\sum W_i * \left(\frac{P_{ci}}{P_{oi}}\right)}{\sum W_i} * 100$$

where  $I_c$  = Index for current month

$W_i$  = Weight associated with product  $i$

$P_{ci}$  = Price of product  $i$  for the current month

$P_{oi}$  = Price for product  $i$  for the reference period (2003)
