

PRODUCER PRICE INDEX - MANUFACTURING (PPI-M)

4th Quarter 2007

1. Introduction

The Producer Price Index (PPI-M) measures changes in the effective prices received by producers of the Manufacturing sector (excluding establishments formerly operating with Export Enterprise Certificate) for that part of their output, which is sold on the domestic market. It reflects the price trends of a constant basket of goods, representative of the output of these manufacturing industries.

This issue of the "Economic and Social Indicators" presents a series of PPI-M from 2003 to December 2007, broken down by 16 Divisions (2-digits level of the National Standard Industrial Classification of Economic Activities, NSIC) with weights based on the results of the 2002 Census of Economic Activities, and using year 2003 as base period. Indices for the Divisions 15 and 16, "Manufacture of food products, beverages and tobacco", have been further subdivided by product group and are given separately in Tables 5 to 8. Tables 9(a) and 10(a) present the monthly indices as well as the quarterly and yearly averages for the manufacturing sector and the group "Manufacture of food products, beverages and tobacco" respectively. Comparative monthly indices for the manufacturing sector and the "Food, beverages and tobacco" sub sector are given in tables 9(b) and 10(b) respectively. The methodology used for the calculation of the index is given in annex.

2. Producer Price Index (Year 2003 = 100)

2.1 Monthly index

The Producer Price Index, which stood at 151.1 in September 2007 increased by 1.8% to reach 153.9 in December 2007. The index increased by the same rate, i.e. 0.6%, for the months of October, November and December (Table 1).

The 0.6% increase in the overall index in October was mainly due to increases in the sub-indices of "Manufacture of other non-metallic mineral products" (+3.7%), "Manufacture of wood, wood products and cork except furniture" (+13.3%) and "Manufacture of rubber and plastic products" (+4.8%). The decrease in the sub-index of "Food products, beverages and tobacco", which accounts for nearly 50% of the overall weight, was mainly the effect of price decreases of preservation of meat and meat products (-0.7%) and "Manufacture of other food products (-0.4 %).

In November, the overall index rose by 0.6% due to an increase in the sub-index of "Manufacture of food products" (+3.0%), which was partly offset by a decrease in price of basic metals (-12.4%).

The index registered an increase of 0.6% in December mainly due to increases in the "Manufacture of fabricated metal products" (+4.4%) "Manufacture of food products beverages and tobacco (0.3%) and "Publishing, printing and reproduction of recorded media" (+2.7%).

The evolution of the monthly index by NSIC group for the period 2003 to 2006 is shown in Tables 2, 3, 6 and 7.

2.2 Quarterly Index

Table 4 gives the evolution of the Producer Price Index on a quarterly basis, the quarterly index being computed as the arithmetic mean of the monthly indices. The index which worked out to 150.0 in the third quarter of 2007, went up by 2.0% to reach 153.0 in the fourth quarter of 2007. This 2.0% growth was mainly due to increases in the sub-indices of "Manufacture of food products, beverages and tobacco" (+2.9%), "Manufacture of chemicals and chemical products" (+3.5%) and "Manufacture of other non-metallic products" (+3.7%). This growth was partly offset by a decrease in the sub-index "Manufacture of basic metals" (-8.2%).

Within "Food products, beverages and tobacco", "Food products" rose by 2.6%, mostly explained by higher prices of prepared animal feeds (+6.0%), dairy products (+6.9%) and preservation of meat and meat products (+2.4%), whilst "Beverages and tobacco" rose by 3.6% due to higher prices of beer (+6.8%) and soft drinks (+7.6%). Details of changes are shown in Table 8.

Compared to the corresponding quarter of 2006, the overall index for the fourth quarter of 2007 went up by 15.6%. This was mostly due to increases in the sub-indices of "Manufacture of food beverages and tobacco" (18.4%), "Manufacture of basic metals" (+48.7%), "Manufacture of chemicals and chemical products" (+15.5%) and "Manufacture of fabricated metal products" (+14.9%). Other details of changes are shown in Table 4.

Within "Manufacture of food products, beverages and tobacco", food products increased by 22.6% and beverages and tobacco went up by 9.8%. At a more detailed level, significant increases were noted in the prices of preservation of meat and meat products (+26.6%), vegetable and animal oils and fats (+44.7%), grain mill products (+34.1%). Other details on changes that have occurred during that period are given in Tables 4 and 8.

2.3 Yearly index

The yearly averages since year 2003 for the sector and the group "Manufacture of food products, beverages and tobacco" are shown in Tables 9 & 10 respectively. The yearly overall index for 2007 was 146.4, i.e. 15.4% higher than the figure of 126.9 for 2006. The yearly average for "Manufacture of food products, beverages and tobacco" in 2007 works out to 146.6 compared to 125.1 a year ago, i.e. an increase of 17.2%.

ANNEX

Methodology used in the computation of the Producer Price Index (PPI-M)

1. Scope

The PPI-M covers all large manufacturing establishments (that is those employing 10 or more persons) falling in divisions 15 to 37 of the National Standard Industrial Classification of Economic Activities (NSIC), whose output is mainly sold on the domestic market.

2. Weighting Scheme

The weights have been calculated from the gross output figures derived from the 2002 Census of Economic Activities. Gross output is valued at basic prices, and thus excludes all taxes on products, namely excise duties and value added tax. The weight of a product group represents the share of its gross output out of the total output of the sector.

In the case of sugar, only the sale on the local market has been taken into consideration in establishing the weights.

3. Price collection

Prices collected refer to the prices received by producers for the sale of their products on the local market. The prices exclude all taxes on products, namely excise duty and value added tax.

Selected industries are visited on a quarterly basis, but prices are collected for each month of the quarter.

4. Reference Year

The reference year for the calculation of price relatives is 2003. The base price for a particular product is the arithmetic mean of the 12 monthly prices in 2003.

5. Index Calculation

The PPI-M is calculated at the 5-digits level of NSIC. Indices at the Division level (2 digits NSIC) are then derived as a weighted average of the indices of the products falling within each division. Finally, the overall index for manufacturing is obtained as a weighted average of the Division indices.

The PPI is calculated according to a modified Laspeyre's formula, which is the weighted average of price relatives.

$$I_c = \frac{\sum W_i * \left(\frac{P_{ci}}{P_{oi}}\right)}{\sum W_i} * 100$$

where I_c = Index for current month

W_i = Weight associated with product i

P_{ci} = Price of product i for the current month

P_{oi} = Price for product i for the reference period (2003)
