

**Quarterly Export and Import Price Indices**  
**3<sup>rd</sup> Quarter 2008**  
**(Reference year: 2003=100)**

## 1. Introduction

The Export Price Index (EPI) provides an overall measure of pure price changes (in Mauritian rupees) of domestically produced goods exported to other countries. The Import Price Index (IPI), on the other hand, measures price changes (in Mauritian rupees) of goods purchased from other countries (excluding transactions through the Freeport activities). The weights used for the compilation of the indices have been derived from trade data for the year 2002 while the year 2003 is used as reference year (i.e. 2003=100). Details on the construction of the EPI and IPI are given in the annex.

## 2. Terms of trade (reference year: 2003 = 100)

The terms of trade is the ratio of export price index to import price index. A rise in this ratio indicates that the terms of trade have moved in favour of Mauritius. During the **third** quarter of 2008, the overall export price index decreased by 1.9% compared to the second quarter of 2008 while that of the import price index increased by 8.3%. Consequently, the terms of trade index deteriorated further to reach 67 compared to 74 in the second quarter of 2008 (Table 1).

### **3. Domestic exports (first nine months 2008)**

During the first nine months of 2008, domestic exports were valued at Rs 32,748 million. Compared to the corresponding period of 2007, this figure represents a decrease of 8% in nominal terms, which is explained by decreases of 5% and 3% in prices and volume of exports respectively (Table 2).

### **4. Imports (first nine months 2008)**

Compared to the first nine months of 2007, total imports (excluding aircraft and transactions of the Freeport) went up by 15% to reach Rs 97,238 million in the first nine months of 2008. This is explained mainly by increases of 9% and 6% in prices and volume of imports respectively (Table 3).

### **5. Export Price Index (EPI) (Tables 4-10)**

#### **5.1 Structure of the EPI**

The EPI covers five sections of the SITC, namely “Food and live animals”, “Crude materials, inedible, except fuels”, “Chemicals and related products”, “Manufactured goods classified chiefly by material” and “Miscellaneous manufactured articles”. Exports of goods falling under these sections covered 99% of domestic exports in reference year 2003. Distribution of weights for the different sections, groups of commodities and items are shown in Table 4. In addition to the overall index, separate sub-indices are also given for different product categories.

#### **5.2 Changes in Export Price Index (3rd quarter 2008)**

##### 5.2.1 Overall Index

During the third quarter of 2008, the EPI fell by 1.9% to 120.2, from 122.4 in the second quarter of 2008. This was mainly due to price decreases in the “Food and live animals” section whose prices went down by 8.0%. Compared to price levels in the corresponding quarter of 2007, the index was 4.9% lower, the most significant decrease in prices being registered in the “Miscellaneous manufactured articles” section and “Food and live animals”, the second most important component of the index.

##### 5.2.2 Sub-indices by section and commodity

###### *Section 0: Food and live animals*

During the third quarter of 2008, the sub-index for “Food and live animals” accounting for 29% of the total weight decreased by 8.0% to reach 125.9. This decrease was mainly due to a decrease of 12.4% in the price of sugar which comprises nearly 80% of the weight of this section.

When compared to the third quarter of 2007, the index for this section was lower by 3.2%, being mainly the effect of a decrease of 12.4% in prices of sugar.

*Section 2: Crude materials, inedible, except fuels*

The index for this section increased from 110.4 in the second quarter of 2008 to 122.0 in the third quarter of 2008, following an increase of 10.5% in the export price of fresh cut flowers.

When compared to the corresponding quarter of 2007, the index was 7.6% higher.

*Section 5: Chemicals and related products*

The export price index for this section which stood at 135.0 during the second quarter of 2008 remained unchanged during the third quarter of 2008 but compared to the corresponding quarter of 2007, a decrease of 2.1% is noted.

*Section 6: Manufactured goods classified chiefly by material*

During the third quarter of 2008, export prices of goods in this section, which consists mainly of textile fabrics, went down slightly by 0.7% to 121.3, from 122.1 in the second quarter of 2008 due to a decrease of 15.3% in the “paper, paperboard and articles of paper pulp” component.

Compared to the corresponding quarter of 2007, the index was up by 8.2% being mainly the result of a 12.4% rise in the price of “Textile yarn and fabrics”.

*Section 8: Miscellaneous manufactured articles*

This is the most important section of the index as it carries about 67% of the total weight and consists mostly of articles of wearing apparel.

During the third quarter of 2008, the export prices of goods in this section registered a slight increase of 1.3% moving up to 117.6 from 116.1 in the second quarter of 2008. The export prices of “Articles of apparel and clothing accessories” increased by 1.2% while that of “Optical goods, n.e.s, watches and clocks” went up by 2.9%.

Compared to the corresponding quarter of 2007, the index fell by 6.3% as a result of a decrease of 6.6% in prices of “Articles of apparel and clothing accessories” though an increase of 6.3% in prices of “Optical goods, n.e.s, watches and clocks”.

## **6. Import Price Index (IPI) (Tables 11 - 15)**

### **6.1 Structure of the IPI**

The IPI covers eight out of the ten Standard International Trade Classification (SITC, Rev. 3) sections, namely “Food and live animals”, “Crude materials, inedible, except fuels”, “Mineral fuels, lubricants and related materials”, “Animal and vegetable oils, fats and waxes”, “Chemical materials and related products, n.e.s”, “Manufactured goods classified chiefly by materials”, “Machinery and transport equipment” and “Miscellaneous manufactured articles”.

The two SITC sections not covered are “Beverages and tobacco” and “Commodities and transactions not classified elsewhere”. Goods in these sections represented only one per cent of all imports in 2002. They are not included because of the heterogeneity of the products and the inherent difficulties in pricing the items to a constant quality.

Thus, the index, directly or indirectly, covers about 99% of merchandise imported during 2002. Sixty one per cent of the items are directly represented; for items which are not directly represented, the prices are considered to move similarly to those represented directly.

### **6.2 Changes in Import Price Index – 3rd quarter 2008**

#### 6.2.1 Overall Index

The Import Price Index (IPI) for the third quarter of 2008 increased by 8.3% to reach 180.1 from 166.3 in the previous quarter. This was mainly the effect of increases in prices of “Food and live animals” (5.4%) and “Mineral fuels, lubricants and related materials” (12.9%), “Manufactured goods classified chiefly by material” (8.5%) and “Machinery and transport equipment” (3.5%).

Compared to the corresponding period of 2007, the index went up significantly by 19.9%, mainly due to price increases of 68.6% in “Mineral fuels, lubricants and related material” and 19.0% in those of “Food and live animals”. However, prices of “Manufactured goods classified chiefly by material” decreased by 1.4% same as for “Machinery and transport equipment”.

#### 6.2.2 Sub-indices by SITC section and division

##### *Section 0: Food and live animals*

The index for the section “Food and live animals”, comprising about 16% of the total weight, rose by 5.4%, from 189.9 in the second quarter of 2008 to reach 200.1 in the third quarter of 2008. All divisions within this section registered increases and the most significant price increases were in “Fish, Crustaceans, etc and preparations” (+7.7%) which carries 24% of the weight of this section and

“Vegetables and Fruits” (+13.4%).

Compared to the third quarter of 2007, the index went up by 19.0%, with most important price increases in “Dairy products and birds’ eggs” (39.3%), “Fish and fish preparations” (23%) and “Cereals and cereal preparations” (23%). However, a decrease of 6% was noted in the import prices of “Vegetables and fruits”.

#### *Section 2: Crude materials, inedible, except fuels*

The index for “Crude materials, inedible, except fuels” (about 2% of the total weight) went up by 4.2% from 132.1 in the second quarter of 2008 to 137.6 in the third quarter of 2008, as a result of increases in import prices of “Cork and wood” (4.2%) and “Textile fibres and their wastes” (4.0%).

Compared to the corresponding quarter of last year, the index registered a decrease of 12.0%, being the effect of decreases of 6.2% and 17.9% in prices of “Cork and wood” and “Textile fibres and their wastes” respectively.

#### *Section 3: Mineral fuels, lubricants and related materials*

The index for the section “Mineral fuels, lubricants and related materials” with nearly 18% of the total weight, showed an increase of 12.9% during the third quarter of 2008 to reach 351.6 from 311.4 in the second quarter. This was mainly due to an increase of 11.0% in the price of petroleum and petroleum products.

When compared to the third quarter of 2007, the index shows an increase of 68.6%, owing to a rise of 67.5% in prices of petroleum and petroleum products.

#### *Section 4: Animal and vegetable oils, fats and waxes*

During the third quarter of 2008, the section “Animal and vegetable oils, fats and waxes” which carries about one per cent of the total weight stood at 260.0 compared to 265.6 in the second quarter of 2008, i.e. a decrease of 2.1%.

When compared to the corresponding quarter of 2007, the index showed a substantial rise of 51.8%.

#### *Section 5: Chemical materials and related products, not elsewhere specified (n.e.s)*

The index “Chemical materials and related products, n.e.s” (about 5% of total weight) went down slightly by 0.1% from 121.4 in the second quarter of 2008 to 121.3 in the third quarter of 2008. Increases in prices were registered in “Medical and pharmaceutical products” (1.6%) and “Chemical materials and products, n.e.s” (0.9%) which were offsetted by decreases in “Essential oils and perfume materials” (-4.2%).

The index declined by 6.0% when compared to the corresponding quarter of last year.

*Section 6: Manufactured goods classified chiefly by material*

This is the most important section, carrying about 38% of the total weight. In the third quarter of 2008 the index stood at 127.8 compared to 117.8 in the previous quarter, showing thus an increase of 8.5% over the previous quarter. This is mostly attributable to an increase of 3.6% in the import prices of “Textile yarn, fabrics, made-up-articles n.e.s”, accounting for 69% of the weight of this section.

When compared to the corresponding quarter of 2007, the index for this section shows a decrease of 1.4% with price decrease mainly in the “Textile, yarn, fabrics, made up articles n.e.s”.

*Section 7: Machinery and transport equipment*

The index of “Machinery and transport equipment” with 11% of the total weight increased to 124.2 in the third quarter of 2008 from 120.0 in the previous quarter, i.e 3.5% higher. Import prices of almost all the divisions showed increases. But, the major increase was noted in division “Road Vehicles” (6.9%).

Compared to the corresponding quarter of 2007, the index went down by 1.4%. This was attributable to price decreases in all divisions except “Road Vehicles” (+2.5%) as follows: “Telecommunications and sound recording and reproducing apparatus” (-6.2%), “Office machines and automatic data processing machines” (-3.7%) and “General industrial machinery and equipment” (-5.6 %).

*Section 8: Miscellaneous manufactured articles*

The index for “Miscellaneous manufactured articles” showed an increase of 5.9% from 115.8 in the second quarter of 2008 to 122.6 in the third quarter of 2008. The index was mainly affected by an increase of 7.8% in import prices of goods classified in the division “Miscellaneous manufactured articles, n.e.s” which accounts for 80% of the weight in this section.

When compared to the corresponding quarter of last year, the index was down by 1.7%, resulting from decreases in import prices of “Miscellaneous manufactured articles, n.e.s” (-0.3%) and “Professional, scientific instruments” (-6.0%).

**Table 15 - Quarterly Import Price Index by SITC<sup>1</sup> section, Year 2003**

Section	Description	Weight	Average 2003	2003			
				1st Qr	2nd Qr	3rd Qr	4th Qr
	<b>Overall Index</b>	<b>10,000</b>	<b>100.0</b>	<b>100.6</b>	<b>97.1</b>	<b>101.4</b>	<b>100.9</b>
0	Food and live animals	<b>1,621</b>	<b>100.0</b>	99.4	95.6	102.8	102.2
2	Crude materials, inedible, except fuels	<b>221</b>	<b>100.0</b>	91.6	92.8	101.7	113.8
3	Mineral fuels, lubricants and related materials	<b>1,789</b>	<b>100.0</b>	113.0	90.7	99.9	96.4
4	Animal and vegetable oils, fats and waxes	<b>113</b>	<b>100.0</b>	104.7	95.1	106.4	93.8
5	Chemical materials & related products, n.e.s	<b>467</b>	<b>100.0</b>	97.7	99.2	101.7	101.4
6	Manufactured goods classified chiefly by material	<b>3,776</b>	<b>100.0</b>	97.9	99.4	101.3	101.3
7	Machinery and transport equipment	<b>1,134</b>	<b>100.0</b>	97.6	100.6	102.0	99.9
8	Miscellaneous manufactured articles	<b>879</b>	<b>100.0</b>	96.4	98.7	100.2	104.7

<sup>1</sup> The standard International Trade Classification Revision 3 (SITC Rev. 3)

*ANNEX***Technical Note****Export Price Index (EPI)****Methodology for the Construction of the EPI****Definition**

The Export Price Index (EPI) is a measure of price change of domestically produced Mauritian products shipped to other countries, i.e it excludes re-exports. In addition to the overall index, separate sub-indices are also calculated for different product categories at more detailed level.

The first series of EPI was calculated with the year 1993 as base and reference period. The index was first revised in 1997 and subsequently revised in 2003.

**Comparison with Unit Value Index**

The Unit Value Export Index provides only a proxy measure for price changes of exported goods. It is derived from value and quantity data of products or groups of products obtained from trade returns and is thus highly dependent on the degree of homogeneity of the groups of products considered. On the other hand, the EPI measures pure price changes and is based on actual price measurements of relatively more homogeneous group of products. It requires elaborate specifications of products and takes into account all the main price determining factors such as country of destination, quality, mode of transport and mode of payment.

**Scope and Classification**

The EPI covers all domestic exports, the most important commodities being sugar and textile fabrics and articles of apparel and clothing accessories produced by the EPZ sector.

The index is based on the Nomenclature of the Standard International Trade Classification of the United Nations (SITC Rev 3). Separate sub-indices are produced for each SITC section and for more detailed groups where possible.

### **Selection of Items and Firms**

A representative sample of 38 firms has been selected from trade declarations submitted to the Customs and Excise Department in 2002. The sample was drawn from exporting firms on the basis of regularity of their trade and their volume of exports. A total of 80 items (Entry Level Items, ELI's) which represent 36 products are priced from the selected enterprises.

### **Weighting Scheme**

The weights are derived from the 2002 domestic exports. Weights assigned to each section and group are based on their export values in 2002. Each product or group of products selected for pricing purposes represents all products that fall within that weight group.

### **Base and Reference Period**

The base period for the EPI is calendar year 2002 and the reference period 2003. Bench mark data for the year 2002, based on trade returns, have been used to derive weights. The selected firms have supplied prices of selected commodities for each of the 12 months in 2003. The yearly average price of each product has then been worked out and is used as base price for that product.

### **Price Collection**

Prices are collected directly from co-operating export firms. As far as possible price quotations are reported on a free on board (F.O.B.) basis and are mostly contract prices. Each reporting firm is visited once every quarter but prices are supplied on a monthly basis and are averaged for each quarter.

### **Sugar and Molasses**

Due to their specificity, sugar and molasses have been treated differently. Sugar and molasses produced during a crop year, which normally extends between July and June of the following year, are usually exported during that same crop year. Export prices of these commodities, sugar in particular, are mostly negotiated prices. These prices can be quite volatile between quarters depending on the destination of the shipments. Therefore, in order to eliminate these price distortions between quarters, the same average yearly price for the crop year is used for the four quarters comprising that crop year. The base price of these commodities for the year 2003 is the average price for crops years 2002/03 and 2003/04.

### **Calculation of the EPI**

A modified Laspeyres formula based on the weighted average of price relatives is used to calculate the EPI: the mathematical form of the formula is shown below:

$$I_{ot} = \frac{\sum w_i \times \frac{P_{it}}{P_{io}} \times 100}{\sum w_i}$$

Where  $I_{ot}$  is the index for period t compared to base period 0

$w_i$  is the weight of the  $i^{\text{th}}$  element

$P_{io}$  is the base price of the  $i^{\text{th}}$  element

$P_{it}$  is the price of the  $i^{\text{th}}$  element in period t

$\frac{P_{it}}{P_{io}}$  is the price relative of the  $i^{\text{th}}$  element  
in period t relative to base period 0

$\Sigma$  means summation over all selected elements

### **Uses**

The primary use of the EPI is to deflate export trade statistics. It provides quarterly measures of price trends of Mauritian products sold abroad and can be used for calculating changes in the volume of exports.

It can also serve as a basis to assess the competitiveness of Mauritian products in relation to price trends of common products of other countries with which Mauritius competes for markets.

## **Import Price Index (IPI)**

### **Methodology for the Construction of the IPI**

#### **1. Definition**

The Import Price Index (IPI) provides an overall measure of pure price changes (in Mauritian Rupees) of goods imported into the country.

Unlike Unit Value Import Index which is affected by product mix and country of imports, the IPI is based on actual price measurements of a fixed basket of imported goods. It requires elaborate specifications of products and takes into account all the main price determining factors such as country of origin and quality.

#### **2. Scope and Classification**

The commodities are classified according to the United Nations Standard International Trade Classification (SITC Rev 3). Under this nomenclature, commodities are classified under 3,118 basic headings arranged into 261 groups. These groups are, in turn, assembled into 67 divisions designed to summarise the groups according to their broader characteristics. The divisions are finally consolidated into 10 sections.

Sub-indices are produced for each SITC section and for more detailed groups where possible.

The Import Price Index covers eight out of the 10 SITC sections, namely “Food and live animals”, “Crude materials, inedible, except fuels”, “Mineral fuels, lubricants and related materials”, “Animal and vegetable oils, fats and waxes”, “Chemical materials and related products, n.e.s”, “Manufactured goods classified chiefly by materials”, “Machinery and transport equipment” and “Miscellaneous manufactured articles”.

The two SITC sections not covered are “Beverages and tobacco” and “Commodities and transactions not classified elsewhere”. Goods in these sections represent a low one per cent of all imports in 2002. They are not included because of the heterogeneity of the products and the inherent difficulties in pricing the items to a constant quality.

Thus, the index, either directly or indirectly, covers about 99% of the value of merchandise imported during 2002. Items directly represented constitute 61% of the total value of imports, and for those items which are not directly represented, their prices are considered to move similarly to those represented directly.

#### **3. Weighting scheme**

The weights were derived from total imports in 2002. Weights assigned to each section and group are based on their import values in that year. Each product or group of products selected for pricing purposes represents all products that fall within that weight group.

#### **4. Reference Period**

The base price for the calculation of the indices refers to calendar year 2003 to be in line with the reference period used for the Export Price Index. The firms have supplied prices of selected commodities for each quarter in 2003. The yearly average price of each product has been used as base price for that product.

#### **5. Selection of items and firms**

The commodities forming the basket were selected according to the following criteria:

- (i) As far as possible, an item is included if it is imported regularly and frequently
- (ii) The items selected had to be, to a large extent, representative of the bulk of the trader's import
- (iii) There must be a sustained demand of the commodity variety
- (iv) Items had to be specific and detailed enough for pricing.

Similarly, an importer for a particular product is selected provided that he imports that product on a regular basis.

At the end of the selection process, 171 importers and 142 commodities were selected for subsequent price collection.

#### **6. Price collection**

There are two common practices for the collection of prices of items falling in the basket. Prices for the specified goods are collected each month from importers and average quarterly prices are then derived for compiling the index, or, in case where most imports occur at intervals longer than a month, prices are collected only once every quarter and refer to the last consignment. A preliminary survey of the importers has shown that, in the case of Mauritius, the second practice is more suitable.

Prices are reported on a cost, insurance and freight (c.i.f) basis and are expressed in Mauritian Rupees. Exchange rates from the Customs and Excise Department are used in case prices are reported in foreign currencies.

Though the frequency of imports has been taken into consideration in selecting items and importers, it may happen that some items in the basket have not been imported during a certain period. In such cases, the prices are estimated using the variations in the exchange rate of the currency of imports. The underlying assumption is that the only factor affecting the price is the value of the Mauritian Rupee relative to the transaction currency.

#### **7. Uses of the Import Price Index**

The Import Price Index is an important economic indicator which is used, inter alia, to:

- measure changes in prices of imports
- analyse the effect of import price changes on the various sectors of the economy
- calculate changes in the volume of imports
- calculate the terms of trade (that is the ratio of export prices to import prices)
- analyse the effect of exchange rates on import prices.

## 8. Calculation of the IPI

The compilation of the Import Price Index involves first the derivation of weighted averages through the four levels of the SITC, namely item, group, division and section as follows:

### (a) Commodity item level

The price relative of each item forms the most basic level for the compilation of higher aggregate indices:

$$\text{Price index at commodity level: } I_{it} = \frac{\sum P_{it}}{\sum P_{io}} \times 100$$

where  $I_{it}$  is the price relative of the  $i^{\text{th}}$  commodity in period  $t$  relative to the base period

$\sum P_{it}$  is the sum of the prices of all commodity varieties imported in period  $t$   
 $\sum P_{io}$  is the sum of the prices of all commodity varieties imported in the base period

### (b) Group level

The group index is derived as a weighted average of the commodity indices:

$$\text{Price index at group level: } I_{G(j)} = \frac{\sum W_i I_{it}}{\sum W_i}$$

where  $I_{G(j)}$  is the index for group  $j$   
 $W_i$  is the weight of commodity  $i$

### (c) Division level

Similarly a weighted average of the group indices yields the index at division level:

$$\text{Price Index at division level: } I_{D(k)} = \frac{\sum W_j I_{G(j)}}{\sum W_j}$$

where  $I_{D(k)}$  is the index for division  $k$   
 $W_j$  is the weight of group  $j$

### (d) Section level

The index at the division level is then derived as a weighted average of the indices of the divisions falling within that section.

$$\text{Price index at section level: } I_{S(l)} = \frac{\sum W_k I_{D(k)}}{\sum W_k}$$

where  $I_{S(l)}$  is the index for section  $k$   
 $W_k$  is the weight of group  $k$

### (e) Overall index

Finally, the overall Import Price Index is computed as a weighted average of the indices of the sections.

$$\text{Overall Import Price index: } I_{o(m)} = \frac{\sum W_m I_{S(l)}}{\sum W_m}$$

where  $I_{o(m)}$  is the overall Price Index  
 $W_m$  is the weight of section  $m$
