

# PRODUCER PRICE INDEX - MANUFACTURING (PPI-M)

## 4<sup>th</sup> Quarter 2009

### 1. Introduction

The Producer Price Index (PPI-M) measures changes in the effective prices received by producers of the Manufacturing sector (excluding establishments formerly operating with Export Enterprise Certificate) for that part of their output, which is sold on the domestic market. It reflects the price trends of a constant basket of goods, representative of the output of these manufacturing industries.

This issue of the "Economic and Social Indicators" presents a series of PPI-M from 2003 to December 2009, broken down by 16 Divisions (2-digits level of the National Standard Industrial Classification of Economic Activities, NSIC) with weights based on the results of the 2002 Census of Economic Activities, and using year 2003 as base period. Indices for the Divisions 15 and 16, "Manufacture of food products, beverages and tobacco", have been further subdivided by product group and are given separately in Tables 5 to 8. Tables 9(a) and 10(a) present the monthly indices as well as the quarterly and yearly averages for the manufacturing sector and the group "Manufacture of food products, beverages and tobacco" respectively. Comparative monthly indices for the "Manufacturing sector" and the "Manufacture of food products, beverages and tobacco" sub-sector are given in tables 9(b) and 10(b) respectively. The methodology used for the calculation of the index is given in annex.

### 2. *Producer Price Index (Year 2003 = 100)*

#### 2.1 *Monthly index*

The Producer Price Index, which stood at 167.9 in September 2009 increased by 0.5% to reach 168.7 in December 2009. The index increased by 0.3% in October and 0.1% in November and December (Table 1).

The 0.3% increase in the overall index in October was mainly due to increases in the sub-indices of "Manufacture of food products, beverages and tobacco" (+0.1%), "Manufacture of furniture, and manufacturing n.e.c" (+10.0%) and "Manufacture of chemicals and chemical products" (+0.6%). The increase in the sub-index of "Manufacture of food products, beverages and tobacco", which accounts for nearly 50% of the overall weight, was due to increases in "Processing and preservation of fish and fish products" (+2.3%) and "Manufacture of other food products" (+0.5%), partly offset by a decrease in "Manufacture of bakery products" (-0.1%).

In November, the overall index increased by 0.1% due to increases in the sub-indices of "Manufacture of electrical machinery and apparatus" (+6.3%), "Manufacture of rubber and plastic products" (+1.2%) and "Manufacture of textiles" (+1.1%), partly offset by a decrease in "Manufacture of food products, beverages and tobacco" (-0.1%). The decrease in the sub-index of "Manufacture of food products, beverages and tobacco" was attributable to declines in "Manufacture of vegetables and animal oils and fats" (-0.4%) and "Manufacture of other food products" (-0.1%).

The index registered an increase of 0.1% in December mainly due to increases in "Publishing, printing and reproduction of recorded media" (+2.7%) and "Manufacture of electrical machinery and apparatus" (+5.8%), partly offset by decreases in "Manufacture of food products, beverages and tobacco" (-0.1%) and "Manufacture of furniture, and manufacturing n.e.c" (-0.9%). The decrease in the sub-sector of "Manufacture of food products, beverages and tobacco" was the result of decreases in "Processing and preserving of fruits and vegetables" (-0.1%) and "Manufacture of other food products" (-0.6%).

The evolution of the monthly index by NSIC group for the period 2003 to 2008 is shown in Tables 2, 3, 6 and 7.

## 2.2 Quarterly Index

Table 4 gives the evolution of the Producer Price Index on a quarterly basis, the quarterly index being computed as the arithmetic mean of the monthly indices. The index which was 167.9 in the third quarter of 2009 went up by 0.4% to attain 168.5 in the fourth quarter of 2009. This 0.4% growth was due to increases in the sub-indices of "Manufacture of furniture, and manufacturing n.e.c" (+9.7%), "Publishing, printing and reproduction of recorded media" (+1.8%) and "Manufacture of electrical machinery and apparatus" (+13.7%). This growth was partly offset by a decrease in the sub-index "Manufacture of food products, beverages and tobacco" (-0.2%).

Within "Manufacture of food products, beverages and tobacco", "Manufacture of food products" fell by 0.3%, mostly explained by decreases in "Manufacture of grain mill products" (-1.9%), "Manufacture of vegetable and animal oils and fats" (-0.4%) and "Processing and preserving of fruits and vegetables" (-0.3%) whilst "Manufacture of beverages and tobacco" remained stable. Details of changes are shown in Table 8.

Compared to the corresponding quarter of 2008, the overall index for the fourth quarter of 2008 fell by 5.0%. This was due to decreases in the sub-indices of "Manufacture of food, beverages and tobacco" (-6.2%), "Manufacture of basic metals" (-36.9%), "Manufacture of fabricated metal products" (-4.2%) and "Manufacture of wood, wood products and cork except furniture" (-3.7%), partly offset by "Manufacture of chemical and chemical products" (+3.1%) and "Manufacture of furniture and manufacturing n.e.c" (+10.3%). Other details of changes are shown in Table 4.

Within "Manufacture of food products, beverages and tobacco", "Manufacture of food products" decreased by 9.1% while "Manufacture of beverages and tobacco" shows an increase of 1.1%. At a more detailed level, decreases were noted in the prices of "Grain mill products" (-44.2%), "Production processing and preserving of meat and meat products" (-6.1%), "Manufacture of vegetable and animal oil and fats" (-9.3%), "Manufacture of prepared animal feeds" (-5.8%) and increases in the prices of "Manufacture of sugar" (+105.4%), "Distilling, blending and bottling of spirit" (+2.9%), "Wine" (+3.6%) and "Soft drinks" (+0.6%). Other details on changes that have occurred during that period are given in Tables 4 and 8.

## 2.3 Yearly index

The yearly averages since year 2003 for the sector and the group "Manufacture of food products, beverages and tobacco" are shown in Tables 9 & 10 respectively. The yearly overall index for 2009 was 168.5 i.e. 0.7% lower than the figure of 169.7 for 2008. The yearly average for "Manufacture of food products, beverages and tobacco" in 2009 was 176.4 compared to 178.6 a year ago, i.e. a decrease of 1.2%.

<sup>1</sup> The indices for January 1993 to December 1997 originally based on 1993, and January 1998 to December 2002 based on 1998 have been converted to the new base 2003=100

## **Producer Price Index – Manufacturing (PPI-M)**

### **Methodology for the Construction of the PPI-M**

#### **1. Definition**

The Producer Price Index (PPI-M) measures changes in the effective prices received by manufacturers for that part of their output which is sold on the domestic market. It normally refers to a family of indices which includes:

- (i) Industry output prices indices
- (ii) Detailed commodity price indices, and,
- (iii) Stage-of-processing prices indices

The emphasis of the PPI program is the production of Industry output price indices which will reflect the price trends of a constant basket of goods representative of the total output of an industry. The concepts and definitions of the PPIs largely follow internationally accepted standards.

#### **2. Scope**

The PPI-M covers all large manufacturing establishments (that is those employing 10 or more persons) falling in divisions 15 to 37 of the National Standard Industrial Classification of Economic Activities (NSIC), whose output is mainly sold on the domestic market.

#### **3. Price Collection**

Prices collected refer to the prices received by producers for the sale of their products on the local market. The prices exclude all taxes on products, namely excise duty and value added tax.

Selected industries are visited on a quarterly basis, but prices are collected for each month of the quarter.

#### **4. Weighting Scheme**

The weights have been calculated from the gross output figures derived from the 2002 Census of Economic Activities. Gross output is valued at basic prices, and thus excludes all taxes on products, namely excise duties and value added tax. The weight of a product group represents the share of its gross output out of the total output of the sector.

In the case of sugar, only the sale on the local market has been taken into consideration in establishing the weights.

## 5. Selection of products

The basket consists of 75 producers and 220 varieties. Selection of the commodities included in the basket is proportional to the output of the enterprises selected during the first stage. In the second stage, the list of commodities to be priced is finalized; prevalence being given to those products representative of the output of the industry and that are produced on a continuous basis. Detailed specifications (name, description, brand, weight, size, etc.) of the selected products are obtained from the enterprises.

## 6. Reference Year

PPI-M has 2003 as reference period and is based on 2002 weights. It is considered that, given the relative stability of the sector, the price changes that have been observed would not significantly affect the relative weights of the different categories in the PPI-M.

The base price for a particular product is the arithmetic mean of the 12 monthly prices in 2003.

## 7. Index Calculation

The PPI-M is calculated at the 5-digits level of NSIC. Indices at the Division level (2 digits NSIC) are then derived as a weighted average of the indices of the products falling within each division. Finally, the overall index for manufacturing is obtained as a weighted average of the Division indices.

The PPI is calculated according to a modified Laspeyre's formula, which is the weighted average of price relatives.

$$I_c = \frac{\sum W_i * \left(\frac{P_{ci}}{P_{oi}}\right)}{\sum W_i} * 100$$

where  $I_c$  = Index for current month

$W_i$  = Weight associated with product  $i$

$P_{ci}$  = Price of product  $i$  for the current month

$P_{oi}$  = Price for product  $i$  for the reference period (2003)

## **8. Uses**

- a. The PPI is a leading indicator of the future status of inflation. Movement of PPI is usually indicative of a similar change of part of the CPI. PPI can also be used in the economic analysis of inflation transmission process.
- b. The PPI provides specific price deflators for the computation of national accounts at constant prices in order to measure real growth
- c. The PPI will be helpful in the formulation of contract agreement. It can be used as an escalation clause to protect buyers and sellers against inflation or deflation.
- d. PPI is also used in econometric models, in forecasting and in inventory accounting.

## **9. Missing Prices**

Prices for temporarily missing products, movement of similar items in the group is analyzed, and if it is found unchanged, the price is carried forward for a quarter.

## **10. Reliability of the PPI**

The statistical accuracy of PPI depends heavily on the quality of information provided by respondents. This office places great emphasis on the need for reporting effective selling prices, i.e. the amount realized by a producer when selling its products on the market inclusive of all discounts and other price deductions rather than the list or catalogue prices.

The results are analyzed and monthly changes or comparisons with same month of previous year are undertaken. Comparisons are made with the CPI or with the import/export price indices. Systematic analyzes of the source data are made in the context of weight and base year revisions that occur every five years.
