Quarterly National Accounts

Second Quarter 2011

Introduction

This issue of Economic and Social Indicators on Quarterly National Accounts (QNA) presents quarterly estimates of GDP for first quarter 2007 to the second quarter of 2011. Estimates have been worked out using both the production and the expenditure approach, based on latest available data. The production data covering value added at current prices and growth rates over the corresponding period of the previous year by industry group are presented in Tables 1 and 2, and the components of expenditure of GDP in Tables 3 and 4. Data in these tables have not been seasonally adjusted, which partly explains the fluctuations in the series (Figure 1).

For more meaningful trend analysis, seasonally adjusted estimates of quarterly GDP from the production approach have been worked out. The derived quarter-to-quarter growth rates for first quarter 2005 to the second quarter of 2011, together with some analysis are presented in section 5 of this publication.

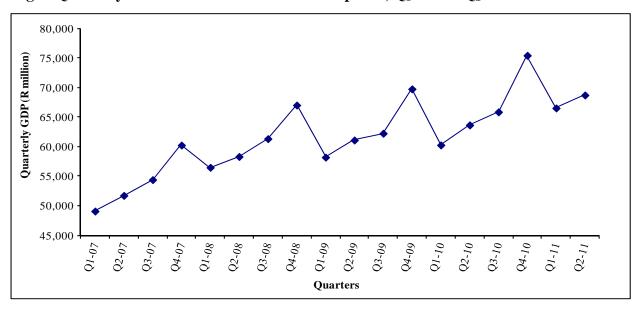

Definitions of terminology are given on pages 8 and 9. The data sources and methods used including the method used for seasonal adjustment are described in the Annex.

2. Quarterly GDP estimates at current prices

2.1 Overall GDP

Figure 1 shows the quarterly GDP estimates at basic prices for first quarter 2007 to the second quarter of 2011. It is observed that throughout the period, the quarterly data follow the same pattern every year. Production is relatively low in the first quarter; it increases gradually in the two subsequent quarters to peak in the last quarter before declining in the first quarter of the following year. This pattern clearly indicates seasonality in the data. Thus, in 2010, GDP at current basic prices which stood at R 60,260 million in the first quarter, increased to R 63,644 million in the second and to R 65,859 million in the third to peak at R 75,410 million in the fourth quarter. It then declined to R 66,516 million in the first quarter of 2011 and increased to R 68,707 million in the second quarter.

The lower GDP figures observed during the first quarters may be due to lower economic activities resulting from temporary closures of firms during the month of January because of New Year festivities. On the other hand, the higher GDP figures during the last quarters could be explained by more activities in "Hotels and restaurants" due to high tourist arrivals, and "Manufacturing" and "Wholesale and retail trade" to meet the high demand for consumption goods for end of year festivities.

Quarterly data for the years 2007 to 2010 indicate that around 23% of the annual GDP was produced in the first quarters, 24% in the second quarters, 25% in the third quarters and 28% in the fourth quarters.

Quarterly GDP at current basic prices for the second quarter of 2011 is estimated at R 68,707 million compared to R 66,516 million in the previous quarter and to R 63,644 million in the corresponding quarter of 2010.

3. Quarterly GDP growth rates (based on data unadjusted for seasonality) – Table 2

3.1 Growth rates, $Q_12007 - Q_22011$, (year on year change)

Table 2 shows year on year quarterly growth rates by industry group for the period first quarter of 2007 to the second quarter of 2011. The rates represent the percentage change in real value added over the same quarter of the previous year and hence exclude changes due to seasonal factors.

Figure 2 shows the year on year quarterly GDP growth rates for first quarter 2007 to second quarter 2011 and the annual rates for 2007 to 2010. After growths of 5.7% and 5.5% in 2007 and 2008 respectively the economy slowed down in 2009 with a growth of 3.1%. It recovered in 2010 with a growth of 4.2%. Growth for 2011 is forecasted at 4.1%.

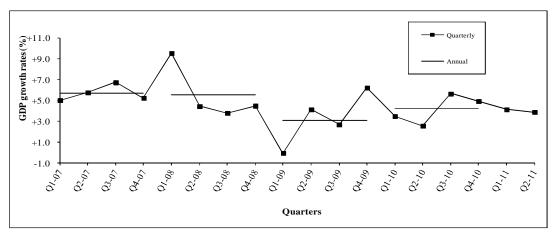

Fig. 2: GDP growth rates, quarterly (percentage change over corresponding period of previous year) and annual, $Q_1 2007 - Q_2 2011$

Quarterly data indicate that, after recording growths oscillating between 5.0% and 6.7% during the four quarters of 2007, GDP peaked at 9.5% in the first quarter of 2008. This was followed by low growths until the first quarter of 2009 when a zero growth was registered. Thereafter, the economy picked up to reach 6.2% in the last quarter of 2009 but slowed down again to 2.6% in the second quarter of 2010. Improvement was noted in the third and fourth quarters of 2010 with growth rates of 5.7% and 4.9% respectively. The quarterly GDP then registered lower growths of 4.2% and 3.9% in the first and second quarters of 2011 respectively.

3.2 Growth rates, first quarter 2011 over first quarter 2010

Based on latest available information, GDP growth for the first quarter of 2011 over the corresponding quarter of 2010 has been revised upward to 4.2% from 3.8% as estimated in June 2011. This upward revision is mostly explained by higher growths in "Manufacturing" (5.2% instead of 4.7%), "Construction" (-4.3% "instead of -11.7%) and Transport, storage and communications" (5.7% instead of 4.4%).

3.3 Growth rates, second quarter 2011 over second quarter 2010

First estimates of GDP for the second quarter of 2011 show that GDP grew by 3.9% when compared to the corresponding quarter of 2010. Growths were registered in all sectors except for "Mining and quarrying" and "Construction". Growths by industry group were as follows:

"Agriculture, hunting, forestry and fishing" grew by 4.0% in the second quarter as opposed to a decline of 3.8% in the previous quarter. The growth of 4.0% was the net result of an increase of 8.6% in "Other agriculture", partly offset by a decline of 6.8% in "Sugarcane".

"Manufacturing" grew by 3.6% in the second quarter, lower than the growth of 5.2% in the first quarter of 2011. The sub-sectors "Textile" and "Other manufacturing" grew by 17.0% and 1.0% respectively, "Food (exc. sugar)" remained stagnant while a decline of 9.8% was noted for "Sugar".

"Electricity, gas and water supply" grew by 2.7% in the second quarter of 2011 after the growth of 6.0% in the previous quarter.

"Construction" contracted further by 6.2% in the second quarter after the decline of 4.3% noted in the first quarter of 2011.

"Wholesale and retail trade; repair of motor vehicles, motorcycles, personal and household goods" grew by 2.8% in the second quarter of 2011, lower than the growth of 3.1% in the first quarter of 2011.

"Hotels and restaurants" registered a higher growth of 5.1% in the second quarter compared to 3.1% in the first quarter.

"Transport, storage and communications" grew by 4.4% in the second quarter after the growth of 5.7% in the first quarter of 2011.

"Financial intermediation" grew further by 7.3% in the second quarter after the growth of 6.4% in the first quarter.

"Real estate, renting and business activities" grew by 6.2% in the second quarter, almost at the same rate of 6.1% in the first quarter.

"Public administration and defence; compulsory social security" grew by 2.4% in the second quarter, following a growth of 2.6% in the first quarter.

"Education" grew by 3.4%, slightly higher than the 3.3% growth of the first quarter.

"Health and social work" recorded a lower growth of 6.1% in the second quarter following the 7.1% registered in the previous quarter.

"Other community, social and personal service activities and private households with employed persons" maintained a 8.0% growth in the second quarter.

3.4 Contribution of industry groups to GDP growth, second quarter 2011

The contribution of an industry to GDP growth depends on two factors, namely, its share in the economy and the change in its real value added. From Table A and Figure 3, it is observed that the main contributors to the 3.9% growth in GDP during the second quarter of 2011 were "Real estate, renting and business activities" (0.8 percentage point), "Financial intermediation" (0.7 percentage point) and "Manufacturing" (0.6 percentage point).

Contributions of the other industry groups ranged from 0.1 to 0.4 percentage point except for "Construction" whose contribution was negative (-0.4 percentage point), and "Mining and quarrying", with negligible contribution.

Table A: Contribution of industry groups to GDP growth (percentage point), Q₁ 2009 – Q₂ 2011

Industry				Cont	ribution t	o GDP g	rowth			
industry	Q ₁ 2009	Q ₂ 2009	Q ₃ 2009	Q ₄ 2009	Q ₁ 2010	Q ₂ 2010	Q ₃ 2010	Q ₄ 2010	Q ₁ 2011	Q ₂ 2011

service activities and private households	0.2	0.3	0.4	0.4	0.3	0.3	0.4	0.4	0.4	0.4
with employed persons										
GDP at basic prices published	0.0	4.1	2.7	6.2	3.5	2.6	5.7	4.9	4.2	3.9

Contribution of an industry to the GDP growth is calculated as the product of its share in the economy and the year on year growth rate.

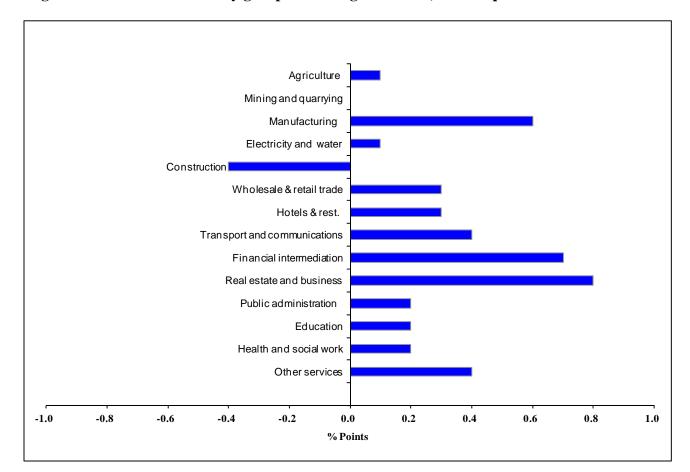

Fig 3: Contribution of industry groups to GDP growth rate, second quarter 2011

4. Quarterly GDP by expenditure

4.1 Quarterly expenditure components at current prices

During the second quarter of 2011, final consumption expenditure which comprises consumption expenditure of private households and general government, amounted to R 68,453 million, representing 87.7% of the quarterly GDP at market prices. Final consumption of households estimated at R 57,505 million represented 73.7% of the quarterly GDP, and that of general government estimated at R 10,949 million, the remaining 14.0% (Table 3).

Analysis of quarterly data from 2007 to 2010 shows seasonality in household consumption expenditure with highest consumption occurring during the fourth quarters. In 2010, it is noted that household consumption expenditure during the fourth quarter represented 28% of the yearly total compared to 23%, 24% and 25% in the first, second and third quarters respectively.

"Exports of goods" is observed to be highest during the third and fourth quarters while "Exports of services" which comprises mainly tourist earnings and revenue of the national airline from foreign travellers is highest during the first and fourth quarters.

Imports of goods are highest in the fourth quarters, mainly explained by high consumption at the end of the year.

There is no distinct seasonal pattern in the data for general government consumption expenditure, Gross Domestic Fixed Capital Formation (GDFCF) and imports of services.

4.2 Quarterly growth rates of expenditure components, second quarter 2011

Analysis of year on year quarterly GDP by expenditure shows that total final consumption expenditure in real terms increased by 1.5% in the second quarter of 2011, lower than the 3.1% growth in the first quarter of 2011 (Table 4). The final consumption expenditure of households grew by 1.6% in the second quarter of 2011 compared to 3.3% in the previous quarter while that of general government grew by 1.1% after the growth of 2.0% in the first quarter of 2011.

Investment contracted further by 16.1% during the second quarter after the decline of 3.1% registered for the first quarter. The contraction of 16.1% is the combined result of declines of 6.8% and 24.2% in "Building and construction work" and "Machinery and equipment" respectively.

The decline of 6.8% in "Building and construction work" in the second quarter of 2011 is attributable to a contraction of 26.0% in "Non-residential building" partly offset by a growth of 14.6% in "Other construction work" and 1.0% in "Residential building".

The negative growth of 24.2% in "Machinery and equipment" in the second quarter of 2011 is explained by a decline of 30.6% in "Other machinery and equipment" mitigated by a growth of 2.0% in "Other transport equipment".

Both exports and imports of goods and services continued in their increasing trend observed since the last quarter of 2009. Exports of goods and services grew by 5.5% following the growth of 16.0% in the first quarter of 2011. This is the combined effect of growths of 9.1% and 2.1% in exports of goods and of services respectively.

Imports of goods and services grew by 3.4% in the second quarter of 2011 lower than the growth of 8.6% in the previous quarter. The 3.4% growth is the result of a growth of 12.8% in imports of services and a decline of 0.6% in imports of goods.

5. Seasonally adjusted quarterly GDP

Table B and Figure 4 show the year-on-year quarterly GDP growth rates based on unadjusted data and the quarter-to-quarter growth rates based on seasonally adjusted data for the first quarter 2005 to second quarter 2011.

As indicated earlier, while the year-on-year growth rates can be used to analyse trends, the quarter to quarter growth rates provide a more meaningful trend analysis with the advantage of being able to detect trend changes much earlier. For example, the quarter-to-quarter data shows a decline in second quarter of 2008 followed by a recovery in the third quarter; when using the year-on-year growth rates, a stagnation is observed in the first quarter of 2009 and a pick up in the following quarter.

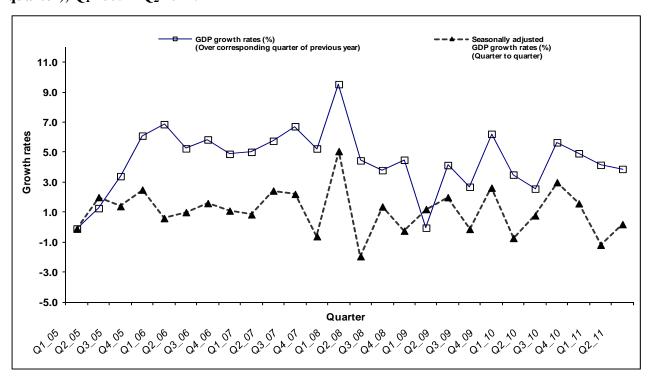

Quarter to quarter GDP growth rates based on seasonally adjusted data show that the economy improved slightly by 0.2% in the second quarter of 2011 as opposed to a decline of 1.2% in the first quarter of 2011.

Users may consult the website of the Statistics Mauritius (http://statsmauritius.gov.mu) for seasonally adjusted growth rates by industry group.

Definition of terminology used

1. Gross Domestic Product (GDP)

GDP is the aggregate money value of all goods and services produced within a country out of economic activity during a specified period before provision for the consumption of fixed capital.

2. GDP at basic prices

GDP at basic prices is obtained as the difference between output and intermediate consumption whereby output is valued at basic prices and intermediate consumption at purchasers' prices.

The basic price is the amount receivable by the producer exclusive of taxes on products and inclusive of subsidies on products. The equivalent for imported products is the c.i.f. value, i.e. the value at the border of the importing country.

The purchasers' price is the amount payable by the purchaser exclusive of deductible taxes on products (e.g. deductible value added tax).

3. GDP at market prices

GDP at market prices is equal to the GDP at basic prices plus taxes (net of subsidies) on products.

4. Final Consumption expenditure

Final Consumption expenditure refers to the expenditure made on goods and services by households and government.

5. Gross Domestic Fixed Capital Formation (GDFCF)

GDFCF is the net additions to the physical assets of the country in a year. These consist mainly of investment in buildings, plants, machinery and transport equipment, all valued at market prices.

6. Exports and Imports of goods and services

Exports and imports of goods are measured on an f.o.b. basis. Insurance and freight, which represent the difference between the c.i.f. and f.o.b. values of imports of goods, are recorded as import of services.

Exports and imports of goods are compiled according to the General Trade System, using the national boundary as the statistical frontier. All goods entering the country are recorded in imports and goods leaving the country in exports.

7. Export Oriented Enterprises (EOE)

Export Oriented Enterprises comprise enterprises formerly operating with an export certificate and thise export manufacturing enterprises holding a registration certificate issued by the Board of Investment.

8. Change in inventories

Change in inventories includes the value of the physical change in inventories of raw materials, work in progress, and finished goods held by producers.

9. Financial intermediation services indirectly measured (FISIM)

FISIM is obtained as the difference between interest received and interest paid by banks excluding those received on own funds. As recommended by the 1993 SNA, it is allocated to users as follows: intermediate consumption of businesses, final consumption of households and government, and a component of exports of services.

Note: Figures in some tables may not add up to the total published due to rounding off.

ANNEX

Concepts, data sources and methods for compiling quarterly GDP estimates

1. Concepts and definitions

The quarterly estimates have been compiled according to guidelines provided in the IMF manual entitled "Quarterly National Accounts Manual – Concepts, Data sources and Compilation", which is itself based on the System of National Accounts 1993 (SNA 93) of the United Nations and are therefore consistent with annual estimates of the National Accounts.

2. Sources of data

The objective of the Quarterly National Accounts (QNA) is to provide the best indication of quarterly movements. Indicators for QNA have therefore been chosen according to their ability to capture the movements in the performance of the various sectors.

The main sources of data for compiling QNA estimates include quarterly production accounts of various organisations, quarterly surveys on income and expenditure among enterprises considered as drivers in specific sectors, quarterly quantity produced, quarterly expenditure of Government from the Accountant General Department, quarterly data from administrative sources such as building permits from local government, foreign trade data from the Customs Department, turnover data from the VAT systems, tourism receipts from Bank of Mauritius, as well as some indirect indicators such as employment.

3. Methods used

When data on both output and input are available, the quarterly value added estimates are computed as the difference between the output and the intermediate consumption (inputs consumed in the process). When the quarterly output only is readily available or is compiled on the basis of quarterly data on quantity produced, the value added is computed using the production structure of the industry obtained at the latest Census of Economic Activities or from the latest annual production accounts available. When indicators on quarterly volume produced and price only are available, these are applied to the last quarterly value added figures to have the estimates for the quarter under review.

Constant price estimates take account of effects of prices and provide real growths. The constant price estimates are computed using the double deflation method for sectors where information on both inputs and outputs is available. In practice such data are difficult to obtain, hence 'proxy indicators' of volume changes are used if available, otherwise value series are deflated by an appropriate price index.

As recommended in the Quarterly National Accounts Manual (Concepts, Data Sources and Compilation) of the International Monetary Fund (IMF), the Annual Overlap Technique has been used to derive constant quarterly estimates, instead of the traditional fixed-base year constant price estimates. This technique entails compiling estimates for each quarter at the weighted annual average prices of the previous year. The volume data of QNA are then chain-linked to obtain the constant price series.

More details on the data sources and methods used for the different sectors are given in the table at section 5.

4. Seasonal adjustment of quarterly GDP

Statistics Mauritius has decided to increase its current outlay of statistical tables on National Accounts with the presentation of seasonally adjusted time series of quarterly national accounts estimates. However, at present only seasonally adjusted figures of value added by sector and total GDP are available. The methodology adopted in the seasonal adjustment exercise is briefly given below. Seasonally adjusted time series has historically been a common practice in analyzing business cycles. Currently this is widely use by a majority of statistical offices, central banks and policy analysts to describe and understand the most recent economic developments.

4.1 Procedures for seasonal adjustment of quarterly GDP

QNA data are subject to seasonal variations which are recurrent within a year pattern. For example, activities of "Wholesale and retail trade" are usually lowest in the first quarters, but highest in the fourth quarters in line with the high demand for consumption goods at the end of the year; activities of "Hotels and restaurants" are highest in the first and last quarters in line with high tourist arrivals during these quarters. For meaningful comparison of quarter to quarter growth, particularly for identifying turning points, the seasonal component must be removed from the data.

The procedures for carrying out the seasonal adjustment exercise are as follows:

- (i) The software, Demetra, developed by Eurostat and which includes the X-12 program has been used.
- (ii) Forward adjustment, instead of concurrent adjustment, has been used for quarterly series up to the most recently completed year, that is seasonal factors for the four quarters ahead are estimated using the X-12 procedure. When a new data point becomes available, the seasonally adjusted value of the new data point is obtained by dividing it by the appropriate forward factor if model is multiplicative or subtracting from it the appropriate forward factor if the underlying model is additive.
- (iii) The seasonal adjustment exercise has been reworked using data up to 2010. In the light of the new seasonal factors, the seasonally adjusted growth rates for the period 2000 to 2010 have been revised.
- (iv) Indirect adjustment, that is seasonally adjusted GDP obtained by summation of seasonally adjusted components of GDP, has been used for the aggregate GDP.
- (v) Adjustments have been made so that the sums of quarterly seasonally adjusted data are equal to the original yearly totals.

It should be noted that different seasonal adjustment methods, no matter how carefully they have been implemented, do not always yield identical results if applied to the same time series. In addition, even if the same seasonal adjustment method is applied, there may be substantial revisions, particular towards the end of the time series, when new data are included in the calculation and taking account of possible shifts in the seasonal movements. Consequently, seasonally adjusted data remain provisional for longer than unadjusted figures, which are also subject to revisions.

5. Data sources, methods and indicators used for the estimation of quarterly GDP

The table below gives the data sources and methods used for the estimation of quarterly GDP estimates at current and constant prices by both the production and expenditure approaches.

Production approach

Industry group	Data sources	Methods	Indicator - constant price estimates
	A. Agri	iculture, Hunting & Forestry	
Sugar Cane	 Annual production and price of sugar. Final annual production accounts. Survey of sugar factories to have the quarterly cost structure. 	 Final estimates: Based on the final annual production accounts. Annual gross output and intermediate consumption are allocated to quarters according to cost structure of cane growing furnished by surveyed sugar factories. The value added is thereafter derived. Preliminary estimates: value added for the year based on expected production and price of sugar is quarterlised using the latest value added structure. Revision is made when survey data are available. 	- Double deflation using Quarterly PPI-A for output and relevant Consumer Price Index (CPI) components and other sources for inputs Preliminary quarterly changes are based on proportions of the deflated annual estimates/forecasts.
Tea and Tobacco	 Quarterly production and prices of tea from Tea Board. Quarterly production and prices of tobacco leaves from Tobacco Board. Benchmark ratios from Agricultural Cost of Production Survey (ACOPS 2005) 	 Gross output based on quarterly production and prices. Value added based on annual production structure. 	- Double deflation using Quarterly PPI- A for output and relevant CPI components and other sources for inputs.
Food crops	 Monthly quantities of food crops from Agricultural Research and Extension Unit (AREU). Retail prices through the monthly consumer price surveys. Benchmark ratios from Agricultural Cost of Production Survey (ACOPS 2005) 	- Value added based on quarterly quantities of food crops produced and producers' price obtained from retail prices adjusted for transport and trade margins.	- Double deflation using quarterly changes in the estimated producers' price index based on retail prices for output of relevant CPI components and other sources for inputs.

Industry group Flowers and Fruits	Data sources - Quarterly exports of flowers from Trade Statistics supplemented by an estimate for local sales Monthly production of some fruits from AREU Quarterly production of other fruits based on the "1985 Survey of fruit trees in backyard" supplemented with data from other sources Benchmark ratios from	Methods - Value added based on quarterly sales/quantities produced and PPI-A component/producers' price obtained from retail prices adjusted for transport and trade margins.	Indicator - constant price estimates - Double deflation using quarterly PPI-A/quarterly changes in the estimated producers' price based on retail prices for output and relevant CPI components and other sources for inputs.
Livestock, Poultry and Related Products	Agricultural Cost of Production Survey (ACOPS 2005) - Quarterly production of poultry from main breeders Monthly quantity of livestock slaughtered from the Mauritius Meat Authority (MMA) adjusted for illegal slaughtering Retail prices.	- Value added based on quarterly quantities produced and on producers' price obtained from retail prices adjusted for transport and trade margins.	- Deflation by quarterly changes in the estimated producers' price based on retail prices.
Government Services	- Expenditure of Central Government from the Accountant General Department.	- Value added is estimated at cost, that is, it is equal to compensation of employees and consumption of fixed capital.	- Deflation using a weighted index made up of quarterly wage rate index based on salary compensation, construction price index, price of transport equipment and machinery component of import price index.

Industry group	Data sources	Methods	Indicator - constant price estimates
Fishing	- Quarterly quantities of fish caught from the Albion Fisheries Research Centre (AFRC) Retail prices.	- Value added based on quarterly quantities of fish caught and producers' price obtained from retail prices adjusted for trade margins.	- Deflation by quarterly changes in the estimated producers' price based on retail prices.
	C.	Mining & Quarrying	
Mining & Quarrying	- Quarterly quantities of salt produced and sand extracted, and their prices through surveys of establishments.	- Value added derived using data collected from quarterly surveys	- Deflation using CPI.
	- Annual production accounts of decorative rocks through survey of establishments.	- Annual estimates of value added evenly distributed over the 4 quarters.	- Deflation by wage increase due to salary compensation of July of every year.
		D. Manufacturing	
Sugar Milling	 Annual production and price of sugar. Final annual production accounts. Survey of sugar factories to have the quarterly cost structure. 	 Final estimates: Based on the final annual production accounts; Annual gross output and intermediate consumption are allocated to quarters according to cost structure of sugar milling activities furnished by surveyed sugar factories. The value added is thereafter derived. Preliminary estimates: value added for the year based on expected production and price of sugar is quarterlised using the latest value added structure. Revision is made when survey data are available. 	- Double deflation using Quarterly PPI-A for output and relevant CPI components and other sources for inputs Preliminary quarterly changes are based on proportions of the deflated annual estimates/forecasts.
Export Oriented Enterprises (EOE)	 Quarterly exports from Trade statistics. Quarterly turnover from the Value Added Tax (VAT) from the Mauritius Revenue Authority (MRA) and the level of stock from quarterly stock surveys. 	- Quarterly value added based on quarterly gross output compiled from these sources and last annual technical ratio.	- Volume index from Quarterly Index of Industrial Production (QIIP).

Industry group	Data sources	Methods	Indicator - constant price estimates
Non – EOE	 Quarterly exports from Trade Statistics Quarterly turnover from the MRA Production of excisable goods from Customs and Excise Department Level of stock from quarterly stock surveys 	- Quarterly value added estimates based on quarterly gross output compiled from these sources and last annual technical ratio.	- Volume index from Quarterly Index of Industrial Production (QIIP)
		icity, Gas & Water Supply	
Electricity, Gas & Water Supply	- Quarterly production accounts from Central Electricity Board (CEB) and Central Water Authority (CWA) - Quarterly production data of the Independent Power Producers	- Value added compiled from quarterly accounts. - Value added derived from the value of electricity purchased by CEB and quarterly technical ratio of the previous year.	- Volume based on quarterly quantity of electricity and water sold.
Construction	- Monthly building permits from	F. Construction - Quarterly output based on these sources and quarterly value added derived using the	- Deflation by quarterly
	Municipalities and District Councils - Quarterly capital expenditure estimates of General Government from Accountant General Department - Maintenance expenditure by Government based on quarterly output of the Ministry of Public Infrastructure from Accountant General Department - Maintenance expenditure by households from latest Household Budget Survey	production structure obtained at the 2007 CEA.	Construction Price Index with base period as second quarter of 2009.

Industry group	Data sources	Methods	Indicator - constant price estimates
G. Wholesale	& Retail Trade, Repair of	Motor Vehicles, Motorcycles, Personal & Hou	sehold Goods
Wholesale & Retail Trade	 Quarterly imports from Trade statistics Local production from Agriculture statistics and Industrial statistics 	 For imported goods, gross output based on trade margins computed from quarterly imports. For local production, gross output based on trends of production of food crops and production of the non-EOE sector. Value added derived using the production structure obtained at the 2007 CEA. 	- Change in volume of imports derived by deflating imports by sector by relevant IPI components
Repair Services		Quarterly estimates based on imports of spare parts.	- Deflation by Consumer Price Index.
	H.	Hotels & Restaurants	1
Hotels & Restaurants	 Quarterly tourist arrivals from Tourism statistics Quarterly tourist earnings from Bank of Mauritius Expenditure on food and accommodation by tourists from Survey of tourist expenditure 	 Gross output based on quarterly estimates of expenditure on food and accommodation derived from quarterly tourist earnings and pattern of expenditure of tourists. Value added is estimated using the production structure obtained from latest available annual production accounts. 	- Volume based on number of tourist nights weighted by an average expenditure per tourist per night.
		ort, Storage & Communication	
Land Transport	•	, 0	
Bus	- Quarterly production accounts of bus companies from National Transport Authority (NTA)	- Value added compiled from quarterly accounts	- Double deflation using bus fare for output and relevant CPI components for inputs.
Taxi	 Quarterly licences of taxi cars from NTA Taxi fares from monthly consumer price surveys. 	 Output based on the quarterly number of licences delivered and taxi fare. Value added derived using the production structure obtained at the 2007 CEA. 	- Double deflation using CPI relevant components for inputs and taxi fare for output.
Lorries	 Quarterly licences of lorries from the National Transport Authority Lorry charges based on CEA and inflation. 	 Output based on the quarterly licences of lorries. Value added derived using the structure obtained at the 2007 CEA. 	- Double deflation using relevant CPI components for both output and inputs.

Industry group	Data sources	Methods	Indicator - constant price estimates
Water transport	- Quarterly number of passengers from Mauritius Shipping Corporation.	 The number of passengers and fares charged as per CPI are used to estimate quarterly output. Value added is derived using the production structure obtained at the 2007 CEA. 	- Volume based on number of passengers.
Air transport	- Quarterly receipts and expenditure from Air Mauritius Ltd.	- Value added compiled from quarterly accounts	- Double deflation using airfare index for output and relevant CPI components for inputs.
Services allied to transport	- Quarterly receipts and expenditure from Mauritius Ports Authority (MPA) and Cargo Handling Corporation (CHC).	- Value added compiled from quarterly accounts where available.	- Volume based on tonnage of goods loaded and unloaded.
	- Quarterly indicators such tourist arrivals and Mauritian travelling abroad.	- For other activities, annual estimates are quarterlised using the quarterly indicators.	- Volume based on quarterly indicators.
Telecommunication services	- Quarterly data from the VAT systems from the Mauritius Revenue Authority (MRA).	- Value added compiled from quarterly turnover obtained from the VAT systems.	- Deflation by changes in the price of telephone calls.
		nancial Intermediation	
Financial Intermediation	- Quarterly survey among banks and insurance companies.	- Value added compiled from quarterly accounts.	- Banks: Double deflation using changes in interest rates for output and inflation for inputs - Insurance sector: Volume based on changes in the number of vehicles and number of life policies.
Ownership of	- Number of housing	- Output based on imputed rent of owner	- Deflation by
dwellings	units (HU) from Housing Census - Expenditure by household on rent from household budget survey.	occupied dwellings estimated as the product of number of HU and rent per HU. - Value added is derived after deducting from the output, expenses on maintenance of residential buildings updated from Household Budget Survey 2006/07.	quarterly Consumer Price Index.

Industry group	Data sources	Methods	Indicator - constant price estimates
Renting and Business services	 Trends in related sectors. Indirect indicators such as no. of cases lodged in court and tourist arrivals. 	This sector comprises units which offer their services to different activities, both offshore and onshore. Their output consequently follows that of the respective activity groups.	- Deflation by Consumer Price Index.
	. Public Administration	& Defence; Compulsory Social Security	
Public Administration and Defence; Compulsory Social Security	- Expenditure of Central Government from the Accountant General Department.	- Estimates are made at cost, that is, the gross output is equal to the purchase of goods and services, compensation of employees and consumption of fixed capital; value added is equal to compensation of employees and consumption of fixed capital.	- Deflation using a weighted index made up of quarterly wage rate index based on salary compensation, construction price index, price of transport equipment and machinery component of import price index.
	M.	Education services	
Education Services	- Expenditure of Ministry of Education from the Accountant General Department.	- Value added for education services provided by Government is estimated at cost, that is, it is equal to compensation of employees and consumption of fixed capital.	- Deflation using a weighted index made up of quarterly wage rate index based on salary compensation, construction price index, price of transport equipment and machinery component of import price index.
	- Annual data on enrolment from the Ministry of Education - Enrolment from private schools and Industrial Vocational Training Board (IVTB) - % change in fees charged for private tuition estimated from the subindex for "Education" obtained from the CPI Unit	 Private schools and IVTB: annual output is divided by 4. Private tuition fees: output based on ten months only (February to November) are quarterlised accordingly. 	 Volume based on enrolment statistics. Deflation by CPI component

	N. Health and Social Work			
Health and Social Work	- Expenditure of Ministry of Health from the Accountant General Department.	- Value added for health services provided by Government is estimated at cost, that is, it is equal to compensation of employees and consumption of fixed capital.	- Deflation using a weighted index made up of quarterly wage rate index based on salary compensation, construction price index, price of transport equipment and machinery component of import price index.	
	 Annual production accounts of clinics. Quarterly data on admissions in clinics and hospitals from the Ministry of Health. No. of private medical practitioners from the Ministry of Health. Fees charged from monthly consumer price surveys. 	Annual value added for private health services are computed using available production accounts of clinics and supplemented with indicators on private practitioners. The estimates are quarterlised using quarterly data on admissions to clinics and hospitals.	- Deflation by CPI component.	
		munity, Social & Personal Services		
Sanitary Services	- Quarterly production accounts of Waste Water Authority Quarterly surveys among a sample of private companies.	- Value added compiled from quarterly accounts.	- Deflation by Consumer Price Index.	
Amusement and Recreational Activities	- Monthly data from the VAT Department	 Quarterly gross output derived from the VAT returns. Value added estimated using technical coefficients obtained from latest available annual final production accounts. 	- Deflation by Consumer Price Index	
Personal Services.	 Quarterly turnover from the VAT department Demographic statistics such as births, deaths and marriages Tourist arrivals 	 Quarterly gross output derived from the VAT returns. Quarterly value added estimated using technical coefficients obtained from latest available annual final production accounts. For companies not registered at the VAT: annual estimates are quarterlised using indirect indicators such as quarterly number of births, deaths, marriages, and tourist arrivals. 	- Deflation by Consumer Price Index.

Data sources, methods and indicators used for the estimation of quarterly GDP Expenditure approach

Item	Sources & Methodology	Indicator – constant price estimates
Final Consumption Expenditure - Household (HH)	Annual estimates are quarterlised using Continuous Multi-Purpose Household Survey (CMPHS) and HBS structure adjusted for conceptual difference with national accounts.	- Deflation by Consumer Price Index.
Final Consumption Expenditure – General Government	Government consumption expenditure is equal to the output (compensation of employees, consumption of capital and value of goods and services purchased) of General Government calculated at cost less goods or services sold plus expenditure on social benefits in kind. All data are available on a quarterly basis at the Accountant General Department, except consumption of capital, which is worked out by dividing the available annual estimate by 4.	- Deflation using a weighted index made up of quarterly wage rate index based on salary compensation, construction price index, price of transport equipment, machinery component of import price index and CPI.

Gross Domestic Fixed Capital Formation (GDFCF)		
Building and Constr	ruction	
Residential Building	Quarterly investment in residential buildings based on quarterly data on floor area from building permits (with a lag of 1 quarter) and quarterly Construction Price Index, together with quarterly data from National Housing Development Company (NHDC) and other sources, and an estimate for projects for which no permit has been issued. The cost per unit of floor area has been revised in 2009 based on the last revision in the Construction Price Index.	- Deflation by quarterly construction price index.
Non-Residential Building and Other Construction Work	Quarterly investment in non-residential buildings and other construction work based on quarterly building permits for non-residential buildings (lag by one quarter) and quarterly Construction Price Index, work in progress of large projects and quarterly data on Government capital expenditure available from the Accountant General Department.	

Item	Sources & Methodology	Indicator – constant price estimates	
Aircraft Marine Vessel	Based on information provided by Air Mauritius Ltd Based on information provided by Mauritius Ports Authority (MPA)	Exchange rate of the currency in which asset is purchased.	
Transport Equipment	Based on information on registered vehicles provided by National Transport Authority (NTA) classified as final consumption expenditure or investment according to purchasers. For transport equipment for which no registration is necessary, imports statistics are used.	A vehicle price index based on seven types of vehicles.	
Other Machinery and Equipment.	Estimates are mostly based on quarterly Trade Statistics given that most of the machinery and equipment are imported. The imported machinery and equipment goods are brought to purchasers' prices by adding all duties and taxes, landing cost, transport cost and margins. Duties and taxes are available from Customs Department, landing cost from Mauritius Ports Authority while rates of transport and margin are based on the results of the 2007 CEA. Annual installation cost obtained through surveys is quarterlised according to the quarterly trend of concerned machinery. Local production of machinery is estimated from outputs of companies producing capital goods.	A weighted deflator based on separate deflators for "locally produced goods" and "imported goods". For the "locally produced goods" PPI components are used whilst for "imported good" IPI for "Machinery and equipment" excluding transport equipment are used to construct the deflators.	
Exports and Imports of Goods and Services	Data available from the Quarterly Balance of Payments (BOP) of the Bank of Mauritius (BOM) adjusted for import and export of FISIM.	- Deflation using quarterly import and export price indices.	
Allocation of FISIM by sector	The quarterly figure of FISIM calculated from data available on deposits, loans and prevailing rates is distributed by sector following recommendation in the System of National Accounts (SNA) 93.	Deflated by overall FISIM deflator.
