

CONSUMER PRICE INDEX

(Base period: July 2006–June 2007 = 100)

Year 2012

1. INTRODUCTION

This issue of Economic and Social Indicators presents the Consumer Price Index (CPI) for the year 2012. The methodology used for computing the CPI and the inflation rate is given in the technical note at Annex.

2. KEY POINTS

2.1 The overall CPI

The Consumer Price Index, which stood at 130.4 in December 2011, registered a net increase of 4.2 points (or 3.2%) to reach 134.6 in December 2012 (Table 2a).

Increases in the monthly CPI were noted in the months of January, March, April and June to December. The increases ranged from 0.1 to 1.5 points with the highest increase in the month of January. The CPI for the months of February and May 2012 remained unchanged.

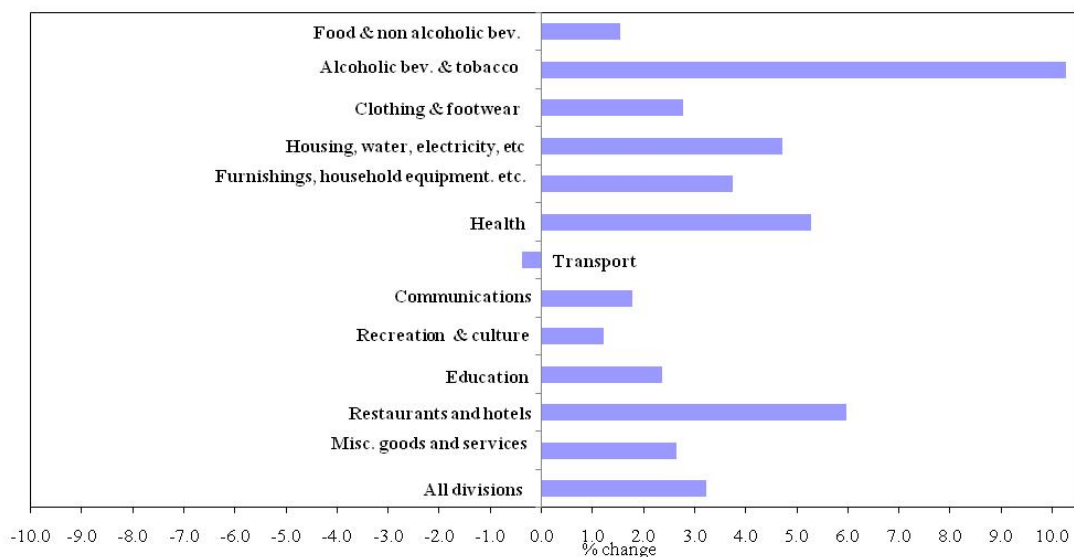

2.2 Overview of CPI movements

The main reasons for the net increase in the CPI during the year 2012 (Table 3) were:

- (a) higher food prices mainly rice, bread, meat, fish and soft drinks;
- (b) higher prices of cigarettes and alcoholic beverages;
- (c) higher prices of ready-made clothing and footwear;
- (d) higher water and waste water charges;
- (e) higher prices of cooking gas;
- (f) higher prices of washing materials and softeners;
- (g) higher clinic and doctors' fees;
- (h) higher charges for expenditure in bars and restaurants;
- (i) higher prices of air tickets;
partly offset by
- (j) lower prices of vegetables and fruits;
- (k) lower interest rates on housing loans; and
- (l) lower prices of motor vehicles.

3. MOVEMENT OF CPI SUB INDICES

Figure 1: % change in CPI sub indices for the year 2012

The changes in the sub-indices for the twelve divisions of consumption expenditure during the year 2012 were as follows:

<i>Food and non-alcoholic beverages (+1.5%)</i>	The rise of 1.5% was the result of higher prices of rice (+2.7%), bread (+7.5%), meat (+2.6%), fish (+10.5%) and soft drinks (+11.6%), partly offset by lower prices of vegetables (-3.2%), fruits (-8.1%), milk (-2.2%) and sugar (-8.3%).
<i>Alcoholic beverages and tobacco (+ 10.3%)</i>	The rise of 10.3% was mainly attributable to price increases of cigarettes (+11.5%) and alcoholic beverages (+9.2%).
<i>Clothing and footwear (+ 2.8%)</i>	The increase of 2.8% was mainly due to higher prices of some ready-made clothing (+2.4%) and footwear (+4.0%).
<i>Housing, water, electricity, gas and other fuels (+4.7%)</i>	The rise of 4.7% was largely the result of higher charges for water (+37.1%) and waste water (+35.2%), higher price of cooking gas (+10.0%) and higher workman's wages (+11.4%), partly offset by lower interest rates on housing loans (-3.6%).
<i>Furnishings, household equipment and routine household maintenance (+3.7%)</i>	The increase of 3.7% was essentially due to higher prices of some washing materials and softeners (+7.1%).
<i>Health (+5.3%)</i>	The increase of 5.3% was mostly due to higher clinic fees (+5.7%) and doctors' fees (+8.1%).
<i>Transport (-0.4%)</i>	The fall of 0.4% was mainly due lower prices of motor vehicles (-6.4%) partly offset by higher prices of air tickets (+8.9%).
<i>Communication (+1.8%)</i>	The rise of 1.8% was essentially due to higher mobile phone charges (+8.9%).
<i>Recreation and culture (+1.2%)</i>	The increase of 1.2% was mainly due to higher prices of newspapers (+9.2%).
<i>Education (+2.4%)</i>	The increase of 2.4% was essentially due to higher pre-primary school fees (+9.6%) and private tuition fees (+3.0%).
<i>Restaurants and hotels (+6.0%)</i>	The rise of 6.0% was the result of price increases of prepared foods (+2.6%), and food and drinks in bars and restaurants (+11.9%)
<i>Miscellaneous goods and services (+2.7%)</i>	The rise of 2.7% was mainly attributable to price increases of some goods for personal care (+2.2%).

4. INFLATION RATE

The headline inflation rate was 3.9% for year 2012 compared to 6.5% for year 2011.

The inflation rate excluding ‘Alcoholic beverages and tobacco’ works out to 2.6% for year 2012 compared to 5.3% for year 2011.

5. INTERNATIONAL COMPARISON OF INFLATION RATE

The table below compares the inflation rate (as measured by the percentage change in the average CPI for a given year relative to the previous year) of Mauritius with those of our main importing countries and some countries in the region for the latest available year, mainly 2011.

Table 1 - Inflation rate (%) of selected countries, year 2011

Country	Inflation rate (%)	Country	Inflation rate (%)
France	2.1	Australia	3.4
United Kingdom	4.5	United States	3.1
China	5.4	Botswana	8.5
India	8.9	Mauritius	6.5
Japan	-0.3	Seychelles	2.6
Singapore	5.2	South Africa	5.0

Source – World Economic Outlook database, October 2012

6. Updating of the CPI basket

In line with international recommendations, updating of the Consumer Price Index basket is done every five years in Mauritius. Statistics Mauritius conducted the Household Budget Survey from January to December 2012 to collect information on the consumption pattern of the population with a view to updating the basket of goods and services.

The next issue of Economic and Social Indicators on Consumer Price Index, to be released in May 2013, will introduce a new series of indices with base period: January - December 2012.

Note :

- (i) This publication is available on the website of the Statistics Mauritius at <http://statsmauritius.gov.mu>. From the homepage, choose “Publications” followed by “Economic and Social Indicators”, then “Consumer Price Index”.
- (ii) The monthly CPI is also available on our website. It is posted within 5 working days after the reference month.
- (iii) More detailed information on CPI can be made available upon request.

Table 6 - Inflation rate (%), 1990 - 2012

<i>Calendar year</i>	<i>Inflation rate</i>	<i>Year</i>	<i>Inflation rate</i>
1990	13.5	1990/91	12.8
1991	7.0	1991/92	2.9
1992	4.6	1992/93	8.9
1993	10.5	1993/94	9.4
1994	7.3	1994/95	6.1
1995	6.0	1995/96	5.8
1996	6.6	1996/97	7.9
1997	6.6	1997/98	5.4
1998	6.8	1998/99	7.9
1999	6.9	1999/00	5.3
2000	4.2	2000/01	4.4
2001	5.4	2001/02	6.3
2002	6.4	2002/03	5.1
2003	3.9	2003/04	3.9
2004	4.7	2004/05	5.6
2005	4.9	2005/06	5.1
2006	8.9	2006/07	10.7
2007	8.8	2007/08	8.8
2008	9.7	2008/09	6.9
2009	2.5	2009/10	1.7
2010	2.9	2010/11	5.1
2011	6.5	2011/12	5.1
2012	3.9		

Technical note

1. Methodology used for the computation of the Consumer Price Index (Base July 2006 – June 2007 = 100)

(a) Definition

The **Consumer Price Index** (CPI) is an indicator of changes over time in the general level of prices of goods and services acquired by Mauritian consumers.

(b) Measurement of the CPI

The CPI measures price change by comparing, through time, the cost of a fixed basket of goods and services. As prices vary over time, the total cost of the basket also changes and thus the CPI measures the change in the cost of this basket. It provides a way to compare what this basket costs at a given period relative to a reference or base period.

The cost of the CPI basket is assigned a value of 100 in the base period and the costs in other periods are expressed as percentage changes compared to the base period. For example, if the CPI is 110, this means that there has been an increase of 10% in the cost of the basket since the base year; similarly an index of 90 means a 10% decrease in the cost of the basket.

(c) The CPI basket

The CPI basket is based on the expenditures of private Mauritian households in a reference period, currently July 2006 to June 2007. The composition of the current CPI basket has been derived from the 2006/07 Household Budget Survey (HBS) data. It has been determined in accordance with latest ILO and SADC recommendations.

The items constituting the basket have been selected on the basis of the importance of household consumption expenditure on them. The basket includes all important items on which consumption expenditure is significant, i.e. accounting for around 0.1% or more of total household consumption expenditure. Each item's relative importance, which is called the "weight" (usually expressed on a total of 1000), is the expenditure share of the item. Non-consumption items such as income tax, social security contributions, purchase of land, shares and life insurance are excluded.

The commodities in the basket are classified according to the UN COICOP (Classification of Consumption Expenditure according to Purpose) with 12 divisions, 43 groups and 84 classes.

(d) Price coverage

The prices used in the CPI calculation are those that any member of the public would have to pay to purchase the specified goods or services. Any taxes on products attached to the goods are included.

Price collection is done on a regular basis. Each month, around 7,800 price quotations are collected in respect of 1,080 item indicators from some 400 outlets selected to be representative of regions across the islands of Mauritius and Rodrigues.

Prices of non-perishable items are collected monthly in the nine geographical districts of the island of Mauritius and in Rodrigues.

Prices of fresh fruits, vegetables, meat and fish are collected on a weekly basis from 9 markets in Port Louis, Rose Hill, Quatre Bornes, Vacoas, Mahebourg, Flacq, Goodlands, Pamplemousses and Port Mathurin.

Information on rent is obtained from a quarterly rent survey of some 100 rented dwellings.

(e) Formula for computation of the CPI

The CPI is computed according to the Laspeyres Formula as a weighted average of price relatives of individual items. The weights are fixed and correspond to the base period expenditures. The Laspeyres Index measures the cost of a basket of goods and services at different points in time, relative to the cost of the same basket in the base period.

The formula used for computing the CPI at time t is

$$I_t = \frac{\sum W_i (P_{it} / P_{i0})}{\sum W_i} \times 100$$

where,

- I_t : CPI for period t with reference to a base period 0
- P_{i0} : Price of item i at time 0, i.e. during base period
- P_{it} : Price of item i at time t
- W_i : Weight of item i

The base period is July 2006 to June 2007, the period during which the latest HBS was conducted.

2. Inflation

(a) Definition of Inflation

Inflation is the percentage change in the level of prices (as measured by the CPI) from one period to another.

(b) Calculating the Inflation Rate

The headline inflation rate in Mauritius, like in many other countries, is calculated by using the annual average method, i.e. by comparing the average level of prices during a twelve-month period with the average level during the corresponding previous twelve-month period. This type of inflation rate is more appropriate for adjusting wages, salaries and pensions to compensate for loss of purchasing power. *All inflation rates presented in this publication relate to the headline inflation.*

Another commonly used method of calculating the inflation rate is the so called ‘year-on-year’ method. The year-on-year inflation rate is calculated as the percentage change in the CPI for a given month with respect to the CPI for the corresponding month of the previous year. It is generally used by central banks for monetary policy decisions. Year-on-year inflation rates are not presented in this publication but can be easily calculated through the available monthly CPI.

Note: More information about the concept, computation and use of the CPI is available online in the publication “HBS 2006/07 and updated CPI” [<http://www.gov.mu/portal/goc/cso/ei664/toc.htm>]
