#### Notes:

1. The headline inflation rate is calculated by using the annual average method, that is, by comparing the average level of prices during a twelve-months period with the average level during the corresponding previous twelve-months period.
2. The year-on-year inflation rate is calculated as the percentage change in the CPI for a given month with respect to the CPI for the corresponding month of the previous year.
3. CORE1 excludes food, beverages and tobacco components and mortgage interest on housing loan from headline inflation.
4. CORE2 excludes food, beverages and tobacco, mortgage interest on housing loan, electricity, gas, other fuels and items whose prices are controlled from headline inflation.
