DIGEST OF AGRICULTURAL STATISTICS – 2017

FOREWORD

This is the thirty fourth issue of a regular publication of Statistics Mauritius on agricultural statistics. It contains metadata on agricultural statistics and an overview of the main indicators of the sector.

The digest is published annually and is designed to bring together in a single report as many series as possible on agricultural statistics. It contains information on the sugar, tea, food crop, livestock and fisheries sectors. Data showing the pattern of food consumption of the population are given in the yearly "Food Balance Sheets". Agricultural price statistics are shown in the section "Producer Price Index - Agriculture (PPI-A)". All data relate to the Island of Mauritius, unless otherwise specified.

The data published cover in general the five-year period from 2013 to 2017 and are the latest available as at end of September 2018. Some of the figures are provisional and subject to revision in later issues. Figures in this issue supersede those appearing in previous ones. Historical series of main agricultural statistics can also be accessed from Statistics Mauritius website (<http://statsmauritius.govmu.org>).

It is hoped that the data assembled in this digest will meet the needs of users, in particular agricultural policy makers, planners and scientists.

The preparation of this report has necessitated the mobilisation of resources and the cooperation of numerous organisations, both public and private. Their assistance is gratefully acknowledged.

L. F. Cheung Kai Suet (Ms)

PART I – INTRODUCTION	
1. General	9
2. Definitions	9
3. Technical notes	9
PART II – SOURCES AND METHODS	
1. Production Account	11
1.1 Agriculture, hunting, forestry and fishing	11-14
1.2 Sugar Industry	14
PART III– STATISTICAL TABLES AND ANALYSIS	
1. Overview of main agricultural statistics - 2017	17-19
SECTION 1 - SUMMARY TABLES - AGRICULTURAL SECTOR	
Table 1.1 - Share of agriculture in the economy - Republic of Mauritius, 2015 - 2017	23
1.2 - Distribution of gross value added (GVA) at basic prices by industrial group - Republic of Mauritius, 2015 - 2017	24
1.3 - Production account of agriculture - Republic of Mauritius, 2015 - 2017	25
1.4 - Value added of agriculture at basic prices by main product group - Republic of Mauritius, 2015 - 2017	25
1.5 - Agricultural production, growth rate (% increase over previous year) - Republic of Mauritius, 2015 - 2017	26
1.6 - Agricultural crops: area harvested and production - Island of Mauritius, 2016 - 2017	27
1.7 - Production of agro-industrial products - Island of Mauritius, 2016 - 2017	27
1.8 - Domestic exports of agricultural products -Republic of Mauritius, 2013 - 2017	29

CONTENTS (cont'd)

			Page
Table 1.9	-	Employment in agricultural, industrial and services sector (large establishments) - Republic of Mauritius, March 2013 - March 2017	30
1.10	-	Employment in the agricultural sector (large establishments) - Republic of Mauritius, March 2013 - 2017	31
1.11	-	Employment in the agricultural sector (large and other than large establishments) - Republic of Mauritius, June 2016 & June 2017	32

SECTION 2 - SUGAR INDUSTRY STATISTICS

2.1	-	Production account of the sugar industry - Island of Mauritius, 2015	35
2.2	-	Production account of the sugar industry - Island of Mauritius, 2016	36
2.3	-	Area under sugar cane cultivation - Island of Mauritius, 2016 - 2017 (as at 30 June)	37
2.4	-	Area harvested, cane production, cane yield of estates, metayers and owner-planters - Island of Mauritius, 2008 - 2017	39
2.5	-	Area harvested, cane production, cane yield of estates, metayers and owner-planters by region - Island of Mauritius, 2016 - 2017	40
2.6	-	Sugar crop 2016 (area harvested, cane produced, yield and sugar production by factory area) - Island of Mauritius	41
2.7	-	Sugar crop 2017 (area harvested, cane produced, yield and sugar production by factory area) - Island of Mauritius	42

PART I - INTRODUCTION

1. General

All tables in this issue refer to the Island of Mauritius unless otherwise specified. The 2008 Systems of National Accounts (2008 SNA) has been used for the compilation of production accounts. Figures for section 1 (except tables 1.6 & 1.7) and section 6 (except figure 15) pertain to the Republic of Mauritius and have been adjusted to include backyard food crop production.

2. Definitions

2.1 Basic price

The basic price is the amount receivable by the producer exclusive of taxes payable on products and inclusive of subsidies receivable on products. The equivalent for imported products is the c.i.f (cost, insurance and freight) value, that is, the value at the border of the importing country.

2.2 Purchaser's price

Purchaser's price is the amount payable by the purchaser. This includes trade margins realised by wholesalers and retailers as well as transport margins (that is, any transport charges paid separately by the purchaser) and non-deductible VAT.

3. Technical Notes

3.1 Rounding of figures

It is to be noted that in some tables totals may not add up due to independent rounding of figures.

3.2 Regions (note to Table 2.5)

<u>Regions (Factory Area)</u>	<u>Corresponding districts</u>
North	Port Louis, Pamplemousses and Riviere du Rempart
South	Grand Port and Savanne
East	Moka, Flacq and Part of Plaines Wilhems
West	Black River and Part of Plaines Wilhems

3.3 Symbols and abbreviations

Symbols:

...	:	Negligible
—	:	Nil

Abbreviations:

<i>Rs</i>	:	Mauritian Rupees
<i>000</i>	:	Thousand
<i>No.</i>	:	Number
<i>NA</i>	:	Not Available
<i>Napp</i>	:	Not Applicable
<i>n.e.s</i>	:	Not elsewhere specified
<i>c.i.f</i>	:	Cost, insurance and freight
<i>f.o.b</i>	:	Free on board

3.4 Conversion factors

1 hectare = 2.36922 arpents

1 arpent = 100 perches

1 perche = 11 toises

1 inch = 25.4 millimetres

1 tonne = 1,000 kilograms = 0.9842 long ton

1 hectolitre = 100 litres

To convert degrees Celsius (Centigrade) into degrees Fahrenheit multiply by 9/5 and add 32⁰

Part II – SOURCES AND METHODS

1. Production Account

1.1 Agriculture, forestry and fishing

The activities in this sector are presented in the following sub-groups:

- Industrial crops (sugar cane and tea)
- Food crops, fruits and flowers
- Plant propagation
- Livestock, poultry and related products
- Forestry and hunting
- Fishing
- Government services

(i) *Data sources*

- Census of Agriculture (CA)
- Ministry of Agro-Industry and Food Security
- Mauritius Cane Industry Authority (MCIA)
- Ministry of Ocean Economy, Marine Resources, Fisheries and Shipping
- Mauritius Chamber of Agriculture
- Mauritius Sugar Syndicate
- Food and Agricultural Research and Extension Institute (FAREI)
- Mauritius Meat Authority (MMA)
- Annual Survey of Employment and Earnings
- Household Budget Surveys
- Agricultural Cost of Production Survey (ACOPS)
- Housing Census (HC)
- Special enquiries from food crop planters, quarterly survey of livestock and poultry breeders and providers of agricultural services falling under the non-household sector

(ii) *Methodology*

The benchmark data used in compilation of production accounts for food crops, fruits, flowers, and livestock, poultry and related products is from the 2014 Census of Agriculture (CA2014) conducted by Statistics Mauritius. The CA2014 defines a farm (or agricultural holding) as one

producing mainly for sale. In addition, all agricultural production units producing for own consumption with at least 5 perches of land and/ or with a minimum number of fruit trees in the backyard of private households, are considered as farms. However, estimate for agricultural production falling below the threshold of 5 perches were estimated from the survey of households, which was included in the CA2014.

Based on CA2014, farms are classified in two sectors namely:

- (a) household sector; and
- (b) non-household sector (consisting mainly of private agricultural enterprises and government farms)

Separate production accounts are prepared for each of the sub-groups mentioned above in Section 1.1. Apart from sugar and tea, agricultural activities are performed mainly by small farmers and fishermen who do not keep proper records of their transactions. Because of the lack of proper accounts, a variety of methods, based essentially on the commodity flow approach is used to estimate gross output, intermediate consumption and value added.

(a) *Industrial crops*

Sugar cane: Details on the sugar industry are given separately in Section 1.2.

Tea: Quantities and prices of tea leaves are available from the National Agricultural Products Regulatory Office (NAPRO). Intermediate inputs per hectare are computed based on benchmark ratios from Agricultural Cost of Production Survey (ACOPS) 2005. Total intermediate consumption is then obtained by applying the appropriate rates of inputs to the total area under cultivation.

(b) *Food crops, fruits and flowers*

Food crops: Since July 1997, monthly data on food crops production and area harvested are obtained from FAREI which accounts for about 82% of total production. Estimates of production not covered by FAREI are made on the basis of CA2014 results and also consumption data collected through the Household Budget Surveys. Wholesale prices of some 35 food crops, collected by the Prices unit, are used to obtain basic prices in order to calculate their gross output. Regarding food crops for which wholesale prices are not collected or are not available, retail prices, collected by the same unit, are used to evaluate their gross output at basic price by deducting transport costs and retail margin from its retail price value.

Intermediate consumption expenditure is estimated by applying ratios of inputs from ACOPS 2005. Some of the inputs, for example fertilizers, pesticides, seeds are cross-checked with imports and local production figures.

Fruits: Monthly production of banana and pineapple and area harvested are obtained from FAREI. The latter covers around 85% of production of banana and for the remaining 15% estimates are based on CA2014. With regards to other fruits, the number of fruit trees in bearing age in the household sector is estimated based on the CA2014 and the 2011 Housing Census. Production is estimated in quantity using an average yield per tree based on CA2014, taking into account the climatic factor. This production is valued at basic prices from either wholesale or retail prices collected by the Prices unit.

Flowers: The main source of data for estimating production of flowers is exports data from the Foreign Trade unit and benchmark data from CA2014. Regarding flowers sold on the local market, a separate estimate is worked out based on the number of weddings, deaths, religious ceremonies, etc and also CA2014 results.

(c) *Livestock, poultry and related products*

The Mauritius Meat Authority (MMA) forwards a monthly return on the number of heads and carcass weight of local/imported cattle, sheep, goats and pigs slaughtered at the Abattoir. To these, are added the production from off-abattoir slaughters estimated from CA2014 results and also permits issued by the Ministry of Agro Industry and Food Security. The total quantity multiplied by a weighted average retail price gives the gross output at basic prices after deducting retail margins and transport costs. Estimates of intermediate expenditure on cattle feeds, salt and water etc. are made and deducted from the gross output to obtain value added.

Poultry and egg production is calculated from data obtained through the questionnaires sent to all producers of the non-household sector. These data are supplemented with estimates made for breeders of the household sector based on CA2014 results and also on the number of broilers sold by the non-household farms and on the quantity of feed sold.

Hunting, mainly deer hunting, is undertaken during a specific period of the year. The benchmark data for production is from CA2014 and the associations of hunters provide data on the production of venison. This is valued at basic prices as for other livestock. Intermediate costs for hunting is negligible, therefore the gross output is composed essentially of value added.

Estimates of milk production are obtained from the Animal Production Division of the Ministry of Agro Industry and Food Security and the benchmark data is from CA2014.

(d) *Government Services*

Total output is valued as the sum of production costs and is estimated as follows:

Gross output = Intermediate Consumption
 + Compensation of employees
 + Consumption of fixed capital

The government accounts are prepared by the Accountant General's Department. The expenditure items in the recurrent budget are carefully scrutinised and classified in categories such as compensation of employees, intermediate consumption, capital expenditure, transfers, etc. For other units, data are extracted from their financial accounts.

(e) *Forestry and logging*

Estimates of forestry production namely, wood processed by sawmills and, to a lesser extent, firewood are made on the basis of information obtained from the Forestry Department. Intermediate costs for forestry is negligible, therefore the gross output is composed essentially of value added.

(f) *Fishing*

Data on the quantity of fish caught are provided by the Ministry of Ocean Economy, Marine

Resources, Fisheries and Shipping. Separate figures are given in respect of lagoon and bank fishing. These are then valued at market prices available from the Prices unit. The transport and retail margins are estimated and deducted from the market price value to give gross output at basic prices. Intermediate inputs for lagoon fishing is very low as the fishermen who are engaged in fishing in coastal waters, use artisanal methods and the catch is usually sold fresh. Bank fishing involves higher costs as the fish are caught in high seas in larger vessels. Also, these fish are sold frozen.

1.2 The Sugar Industry

There are three categories of growers in the sugar industry, namely “miller”, “metayer” and “owner” planters. Millers are owners of sugar factors and large plots of land around these factories. Metayers are normally employees of the millers who are allowed to grow sugarcane on their lands.

Value added generated by the sugar industry is attributed, for national accounting purposes, to the following industrial activity groups:

Agriculture: the final product is sugarcane. Both millers and planters are engaged in its production.

Manufacturing: the final product is sugar and its by-products, molasses, scums and electricity, which

excludes Independent Power Producers (IPPs). Only millers are engaged in this activity.

Transport: includes only the millers’ own account transport of sugarcane, sugar and other inputs

Distribution: includes activities of brokers, shippers and the Mauritius Sugar Syndicate:

(i) *Methodology*

The period from the growing stage up to the marketing of all sugar produced covers eighteen months. Production is valued on an accrual basis, so that output relating to crop year, say 2014/2015 is treated as production for calendar year 2014. The sugar cane crop of a given year normally extends from July to June of the following year.

Sugar is marketed solely through the Mauritius Sugar Syndicate. This agency provides data on value and price of sugar, both local sales and exports’ proceeds. All the expenses incurred in respect of marketing are also given.

Production accounts are compiled using information from survey of sugar factories and other data made available by stake holders.

(ii) *Production Account of Sugar Cane*

Separate accounts are prepared in respect of millers and planters.

The gross proceeds from the sales of sugar and its by-products are obtained from the Mauritius Sugar Syndicate. The gross output of sugar cane comprises 78% of the gross proceeds as the

remaining 22% accrue to millers to cover the milling cost.

Agriculture: Intermediate expenses in respect of sugarcane cultivation are compiled from survey of selected sugar factories.

Manufacturing: The end product is sugar and only millers are engaged in its production. The gross output is worked out from the gross proceeds of sugar. The main item under goods consumed is sugarcane; other inputs include milling cost which are obtained from the Mauritius Sugar Syndicate and the survey of sugar factories.

Transport: The sugar estates and millers have their own means of transport. Most of their canes, sugar and other inputs are transported by their own lorries. The 'Transport' activity is valued at cost. The expenditure incurred in respect of purchases of materials and services, compensation of employees and consumption of fixed capital are obtained from surveys. The total of these aggregates gives the gross output. Transport cost is then imputed, on a pro-rata basis, to the intermediate consumption expenditure of the agriculture and manufacturing sectors.

Distribution: The gross output is computed from the related expenditure items as given in the Mauritius Sugar Syndicate report. The cost component consists mainly of elements of value added.

PART III – STATISTICAL TABLES AND ANALYSIS

1. Overview of main agricultural statistics – 2017

1.1 Value added of agriculture

Value added at current basic prices of the agricultural sector was Rs 14,306 million in 2017, representing an increase of 3.2% compared to the 2016 figure of Rs 13,860 million. In real terms, it declined by 0.2%. This is explained by the combined effect of a contraction of 7.9% in “sugar cane” and an increase of 2.3% in “other agriculture”. (Tables 1.1 & 1.5)

1.2 Share of agriculture in Gross Value Added (GVA)

The share of agriculture to GVA was 3.5% in 2017, lower than the figure of 3.6% in 2016. (Table 1.1)

In 2016, the share of the sugar industry in GVA was 1.5%, same as in 2015. (Tables 1.1 & 2.2)

1.3 Employment in agriculture

Employment in agriculture decreased by 0.2% from 41,300 in 2016 to 41,200 in 2017. Employment in “large establishments¹” fell by 0.8 % from 13,300 in 2016 to 13,200 in 2017. On the other hand, employment in other than large establishments remained unchanged in 2017. (Table 1.11)

It is to be noted that the “Voluntary Retirement Scheme” in the Sugar Industry started in 2001 following the enactment of SIE Act No.21 of 2001. In 2007, following agreement reached between Mauritius Sugar Producers Association (MSPA) and the Government, the “VRS” (Voluntary Retirement Scheme) and “ERS” (Early Retirement Scheme) were implemented as per the SIE Act amended No.3 of March 2007. Blue Print involved the closure of sugar factory and the retirement of redundant workers in line with the provisions of the SIE Act. As at December 2017, the figures on the number of employees who have terminated their contract of employment after the period 2007 was 7,139 for VRS 2, 209 for ERS and 939 for “Blue Print”, same as at December 2016.

1.4 Sugar cane

Figures refer to the crop year, starting in July of the reference year up to June of the following year. Sugar cane fields are classified according to agro-climatic conditions in the following four regions: North, South, East and West.

The area under sugar cane cultivation in 2017 was 54,182 hectares, which was 2.5% lower than the 55,560 hectares in 2016. (Table 2.3)

An area of 49,974 hectares under sugar cane was harvested in 2017 as compared to 51,476 hectares in 2016, showing a decrease of 2.9%. (Table 2.4)

The cane yield per hectare for the whole island went up by 0.7% from 73.8 tonnes in 2016 to 74.3 tonnes in 2017. This was due to the combined effect of increases in cane yield in the

¹ Establishments with 10 or more employees

West (+5.1%) and East (+3.6%), and decreases in the South (-3.2%) and North (-0.5%). (Tables 2.4 and 2.5)

The production of cane decreased by 2.2%, from 3,798,448 tonnes in 2016 to 3,713,331 tonnes in 2017. The average extraction rate in 2017 was 9.57% compared to 10.18% in 2016, representing a decrease of 6.0%. (Tables 2.5 and 2.9)

The production of sugar was 355,213 tonnes, that is, 8.0% lower than the figure of 386,277 tonnes in 2016. Around 381,600 tonnes were exported for a total value of Rs 7,116 million, representing a decrease of 27.4% over the 2016 proceeds. (Tables 2.9 and 2.12)

Some 122,273 tonnes of molasses were produced in 2017 compared to 118,144 tonnes in the previous year, representing a rise of 3.5%. The production of scum declined by 3.2% from 124,103 tonnes in 2016 to 120,132 tonnes in 2017. (Table 2.9)

The average ex-syndicate price of sugar per tonne for 2017 was Rs 11,000 compared to Rs 15,571 in 2016, representing a decrease of 29.4%. (Table 2.14)

1.5 Tea

The area under tea cultivation in 2017 was 622 hectares, same as in 2016. (Table 3.1)

Production of green tea leaves went up by 0.1% from 7,301 tonnes in 2016 to 7,309 tonnes in 2017. The production of black tea increased by 1.9% from 1,353 tonnes in 2016 to 1,379 tonnes in 2017. (Tables 3.3 and 3.4)

The quantity of tea exported increased by 14.1% from 41.2 tonnes in 2016 to 47.0 tonnes in 2017, and the earnings from the export of tea increased by 14.3% from Rs 11.9 million to Rs 13.6 million. (Tables 3.5 and 3.6)

1.6 Food crops

The area under food crops harvested increased by 0.2% from 7,766 hectares in 2016 to 7,780 hectares in 2017. The production of food crops increased by 0.3% from 106,271 tonnes to 106,621 tonnes in 2017, mainly explained by favourable climatic conditions. During the same period, the main changes noted in the production of food crops are as follows: chouchou (+33.5), beans (+25.5%), bittergourd (+18.8%), brinjal (+13.2%), onion (-19.6%), potato (-13.5%) and pineapple (-9.8%). (Table 4.1)

1.7 Livestock

Livestock by type as at December 2017 was as follows: cattle (3,815), goat (25,618), sheep (2,934) and pigs (21,445). (Table 5.1)

The production of beef from live cattle increased by 6.2% from 1,956 tonnes in 2016 to 2,078 tonnes in 2017. Beef production from the slaughter of imported cattle rose by 4.7%, from 1,902 tonnes to 1,992 tonnes and local beef production (including live cattle from Rodrigues), which represented only 4.1% of total beef production, went up by 59.3% from 54 tonnes to 86 tonnes. (Table 5.3)

In 2017, the production of goat meat and mutton was 56 tonnes, 33.3% higher than the figure of 42 tonnes in 2016. The share of local production, inclusive of imports from Rodrigues, was 85.5%. (Table 5.3)

Production of pork decreased by 4.1% from 632 tonnes in 2016 to 606 tonnes in 2017. (Table 5.3)

1.8 Poultry

The production of poultry went up by 3.7% from 45,800 tonnes in 2016 to 47,500 tonnes in 2017. (Table 1.7)

1.9 Fish

In 2017, total fish production was 22,732 tonnes, representing a rise of 36.1% over the previous year (16,698 tonnes). Fresh coastal fish catch was 1,758 tonnes in 2017 compared to 1,804 tonnes in 2016, representing a decrease of 2.6%. Other catch (tuna, bank, ponds and barachois etc) increased by 40.8% from 14,894 tonnes in 2016 to 20,974 tonnes in 2017. (Table 5.4)

1.10 Producer Price Index-Agriculture (PPI-A), (Base period: year 2013 = 100)

The PPI-A measures the average change in the selling prices which producers receive for agricultural products. In 2017, the index stood at 100.6, representing an increase of 3.5% over 2016. During the year, the producer price of fresh vegetables increased by 31.2%, while those of sugar cane and animals and animal products decreased by 8.6% and 1.3% respectively. The following main changes in price were registered: creepers (+41.3%), pineapple (+26.0%), tomato (+19.9%), other fresh vegetables (+20.4%) and poultry (-3.9%) (Table 7.2). Comparative monthly indices for the agricultural sector are given in table 7.4.

SUMMARY TABLES

AGRICULTURAL SECTOR

Table 1.1 - Share of agriculture in the economy - Republic of Mauritius, 2015 - 2017

¹ Revised² Provisional

Notes:

1. Harvesting generally extends from June to December, while export and local sales are spread over the period 1st July to 30th June the following year.
2. Production may not tally with exports and local sales due to loss or surplus in storage and mixing of non originating sugar to local production

FOOD BALANCE SHEETS

Food Balance Sheets

General Notes

1. **Methodology:** Prior to 2004, the methodology for the preparation of the food balance sheets was based on the “Handbook of Food Balance Sheets of FAO, 1949”. From 2004 onwards, the “Handbook of Food Balance Sheets of FAO, 2001”, latest version, has been used.
2. **Coverage:** As from 2006, data relate to the residents of the Republic of Mauritius (Islands of Mauritius and Rodrigues). Prior to 2006, data covered the Island of Mauritius only.
3. **Further disaggregates:** Some of the items have been further disaggregated owing to their high calorific values.
4. The column “Manufacture” previously appearing under the heading “Domestic Utilisation” has been renamed as “Food manufacture”. A new column “Other Uses” has been added. Included under this heading are: quantities mainly consumed by tourists and victuals. These items were previously included in “Exports”.
5. Quantity is in tonnes unless otherwise specified.
6. Estimated changes in stock:

A negative sign (-) against “stocks” denotes decrease in supply; the absence of a sign signifies increase in supply.
7. Data on production of food crops used for the computation of Food Balance Sheets include backyard production.
8. Production of meat includes local and imported live animals slaughtered in Mauritius and Rodrigues. Off-abattoir slaughters are also included.
9. Data on fish and crustaceans are given in terms of wet-weight equivalent.

¹ Includes crude oil of soyabeans, sunflower, linseed, palm, etc

² Includes mineral water, soya milk, etc

PRODUCER PRICE INDEX

PRODUCER PRICE INDEX - AGRICULTURE (PPI-A)

Methodology for the computation of the PPI-A

Scope

The PPI-A covers agricultural products that are classified according to the latest Central Product Classification (CPC) Ver.2.1. There are two divisions: Division 01 – Crop Products and Division 02 – Animals & Animal Products. “Crop Products” is further divided into 7 Commodity Groups namely:

- Group 012: Fresh vegetables
- Group 013: Fruit and nuts
- Group 014: Oilseeds and oleaginous fruits
- Group 015: Edible roots and tubers
- Group 016: Stimulant and spice
- Group 018: Sugar cane
- Group 019: Flowers, ornamental plants

Weighting scheme

The weights are derived by multiplying the average of production during 2012, 2013 and 2014 by the average of unit prices in 2013, the reference period. The weight is assigned to each commodity group on the basis of total production (as a proxy for sales) pertaining to the particular group. At commodity level, the weights are apportioned within the commodity group on the basis of production of each product.

Quarterly and annual indices have been computed using a weighting system based on the production value for the base period.

Price collection

In principle, prices collected should refer to farm-gate prices, but it is extremely difficult to obtain such prices for vegetables, not only because of the enormous resources to be mobilised but also because of the unavailability of a list of planters. Hence, in lieu of the farm-gate price, the wholesale price of the produce is recorded at the two auction markets (Vacoas and Port-Louis) every second and fourth week of a month.

In the case of commodities for which prices are fairly stable, data suppliers are visited on a quarterly basis, but prices are collected for each month of the quarter.

Prices of the main commercial crops like sugarcane and tea leaf, which are normally fixed for the crop year, are supplied by the respective marketing agencies.

Conversion factors

<u>Vegetable</u>	<u>Average weight per unit (kg)</u>
Beet	0.3
Cabbage	1.09
Cauliflower	1.04
Cucumber	0.4
Leek	0.12
Lettuce	0.15
Petsai	1.2
Squash	0.3
Sweet pepper	0.2
<u>Fruit</u>	
Banana	0.125
Litchi	0.025
Mango	0.15
Mandarine	0.1
Pineapple	0.5
Watermelon	1.5
Coconut	0.5
<u>Poultry product</u>	
Egg	0.055

Index calculation

The PPI-A is calculated according to a Laspeyres formula:

$$I_t = \frac{\sum W_i(P_{ti}/P_{oi})}{\sum W_i} \times 100$$

where :

I_t is the index for the current period t

P_{ti} is the price of commodity i in the current period t

P_{oi} is the price of the commodity i in the reference period o (2013)

W_i is the weight associated with commodity i

Monthly Producer Price Index -Agriculture (PPI-A)

Table 8.18 : Number of heads by livestock type as at June 2014, Island of Mauritius, (2014 Census of Agriculture)

Livestock type	Number
Cattle	13,900
Goats and sheep	46,100
Pigs	21,400
Poultry	3,835,500
Deer	33,800

Glossary

Virgin crop: The first crop, from newly planted cane.

Ratoon crop: Cane crop grown from the stools of old cane, instead of from freshly planted cane seedlings.

Grande saison: A cane planting crop cycle with harvest in September to November, and replanting in March. The first crop is harvested after 16-17 months in the following year.

Petite saison: A cane planting crop cycle in which cane is harvested early (June – August) and the land is replanted immediately. The first crop is harvested after 12 months the following year.

Polarisation: Degree of polarisation of sugar, which indicates its purity

Interline: Growing of non-cane crops between cane furrows

Molasses: Final residue remaining after centrifuges and crystallization

Cess: A levy on sugar produced per crop year

Flue-cured: Tobacco leaves which are cured in barns using heat at a temperature of about 70⁰ C

Live weight: The weight taken immediately before slaughter

Carcass weight: Weight of the carcass after removal of the following parts (hide or skin, head, fore feet, hind feet, large blood vessels, offal and tail)

Wet weight: The actual ex-water weight of the catch at the time of capture for primary fish.

Per capita consumption (per caput): The per caput figure of each commodity is obtained by dividing the figure for food available for human consumption by the total population partaking of it during the reference period.
