DIGEST OF DEMOGRAPHIC STATISTICS - 2015

FOREWORD

This is the thirty-first issue of a regular publication of Statistics Mauritius on Demographic Statistics. It presents the latest available statistics on population, live births, still births, marriages, deaths and divorces. A set of population projections and life-tables is also included.

As in previous issues, data are presented for the islands of Mauritius and Rodrigues, as well as for the Republic.

It is hoped that the data published in this report will prove valuable to the public at large and particularly to planners and decision makers.

Data required for the preparation of this report were obtained mainly from the Civil Status Division of the Prime Minister's Office and from the Judicial Department. The assistance and cooperation of these two departments are herewith gratefully acknowledged.

Y. Cassimally
Ag Director of Statistics

Statistics Mauritius,
Ministry of Finance and Economic Development,

SECTION 1 - POPULATION

Table	1.1	- Estimated resident population of Mauritius as at 31st December 2014 & 2015	21
	1.2	- Evolution of the resident population of the Republic of Mauritius as from the 2011 census to 1st July 2015	21
	1.3	- Population growth in intercensal periods - Republic of Mauritius, 1851 - 2011	22
	1.4(a)	- Population enumerated at each census by population group and sex - Island of Mauritius, 1846 - 1952	23
	1.4(b)	- Population enumerated at each census by community and sex - Republic of Mauritius, 1962 - 2011	24
	1.5	- Rate of increase of the population of the Republic of Mauritius as compared with other countries, 2010 - 2014	25
	1.6	- Evolution of the population of the Republic of Mauritius by geographical district and sex between the 2000 and 2011 censuses	26
	1.7	- Estimated resident population by geographical district, sex and density - Republic of Mauritius, 2014 & 2015 (Mid-year estimates)	28
	1.8	- Estimated resident population by geographical district, sex and density - Republic of Mauritius, 2014 & 2015 (End-of-year estimates)	29
	1.9	- Population by urban/rural residence and sex at the 2000 and 2011 censuses and the intercensal increase - Republic of Mauritius	30
	1.10	- Estimated resident population by urban/rural residence and sex - Republic of Mauritius, 2014 & 2015 (Mid-year estimates)	32
	1.11	- Estimated resident population by urban/rural residence and sex - Republic of Mauritius, 2014 & 2015 (End-of-year estimates)	33

INTRODUCTORY NOTES

Section 1 - Population

As in the previous issue of the Digest, this report deals with the resident population of the country rather than "de facto" or present population.

Prior to 1990, censuses were taken on a "de facto" basis, i.e they counted all persons present in a household or institution on census night. This method is simple and reduces the risk of omissions and double counts, but it includes non-residents present on census night and excludes residents who were away. For the 1990 and 2000 censuses, a series of questions were asked which allow a count of the resident population to be made by excluding foreign visitors and including residents who were temporarily away on census night. For the 2011 census, combinations of answers to questions asked on whereabouts and usual address enable both the present population (de facto) and the resident population (de jure) counts. The latter was defined as a person who has lived at his/her usual residence for the past twelve months and who intended to live there continuously for at least 12 months.

The resident population base is expected to be more realistic than the "de facto" base. As from 1990, post-censal population estimates relate to resident population. Also, population estimates presented in this publication have been benchmarked with the 2011 Population Census data after adjustment for undercount of persons.

Section 2 - Vital Statistics

The statistics of births, deaths and marriages have been compiled from electronic data supplied by the Civil Status Division, Prime Minister's Office while statistics of divorce have been obtained from the Office of the Master and Registrar, Supreme Court.

Section 3 - Live births

Formerly, the birth statistics published in the Annual Digest of Statistics for any year related only to births which were registered in that year. Although not all births occurring in a year are registered within that year because a delay of 45 days is allowed for registration, the differences between birth statistics tabulated by year of registration and year of occurrence are not expected to be large. However, as recommended by the United Nations, an additional series of tabulations which present birth statistics according to year of occurrence have been included in this report.

All fertility and reproduction rates, whether in previous reports or in the present one, are based on births occurred during the year. The only exception is the crude birth rate which is based on total births registered during the year.

Section 4 - Still births

Data on still births are compiled only according to date of registration. Since still births are normally registered within 24 hours of occurrence, there is not much difference between the data tabulated by date of registration and those tabulated by date of occurrence.

Section 5 - Deaths

The death statistics for any year are based on events registered during that year. Like still births, there is no significant difference between the number registered or occurred since death registration also take place within 24 hours of occurrence.

The main tables included in this section are the life tables for the years 2000, 2011 and 2014 (excluding Rodrigues) and the tables showing deaths due to selected causes. It is to be noted that as from 2005, cause of death is coded according to the "International Statistical Classification of Diseases and Related Health Problems, Tenth Revision" instead of the "International Statistical Classification of Diseases, Injuries and Causes of Death" Revision of 1975 used previously.

Section 6 - Marriages

Prior to 1982, the statistics of marriages for any given year comprised civil marriages and marriages by legally authorised religious persons.

With the introduction of the Civil Status Act of 1981 which came into operation on 1st January 1982, the figures for marriages for the period January 1982 to November 1987 included:

- (a) Civil marriages
- (b) Religious marriages having civil effect
- (c) 'Past religious marriages', i.e. marriages celebrated before 1982 (either in Mauritius or abroad) but registered during the year; and
- (d) Muslim religious marriages (i.e. marriages under Muslim Personal Law)

On the 14th November 1987, the Civil Status Act was amended and since then marriage statistics no longer include Muslim religious marriages under Muslim Personal Law.

It is to be noted that from January 1982 to date, some double counting may be present in the marriage statistics. This occurs because some couples married under Muslim Personal Law during the period January 1982 to November 1987 subsequently marry civilly as well. It is estimated that between 10 to 40 such cases may have been registered annually from 1982 onwards. The total number of marriages celebrated under the Muslim Personal Law during the period when it was in force was 2,580.

Section 7 - Divorces

The number of divorces for any year relates to provisional decrees of divorce which are granted when the Court is satisfied that the petitioner has established his case. Three months after a provisional decree is made, any of the two parties may apply to the Court for the provisional decree to be made permanent.

Section 8 - Projections of the resident population

In the past, regular population projections by sex and age have been prepared either for the Island of Mauritius or more recently, for the Republic as a whole. Given the small population size of Rodrigues separate projections for the island were generally restricted to the total population only. Recently there has been more and more pressing demand for projections by sex and age for the two islands separately. An attempt has therefore been made to prepare such projections and the results are presented in this digest. The projection for the Republic has been obtained by summing the separate projections for the islands of Mauritius and Rodrigues. It has not been possible to integrate Agalega and Saint Brandon islands which together had a resident population of 274 (174 males and 100 females) at the 2011 census.

Until recently, projections published by this office have not gone beyond a range of 20 years. However, there is now more and more interest in long term perspective studies, and in particular the long term implications of ageing with respect to health and pensions issues. It has therefore been decided to carry forward the projections over a period of 40 years and to publish the results although their reliability is expected to diminish over the long range.

- (ii) **Mortality: Sex and age-specific survival ratios improve from current levels in accordance with the Coale and Guang, “New Regional Model Life Tables at High Expectation of Life”.**

Implied life expectancies at birth (e₀) -

Period	Republic of Mauritius		Island of Mauritius		Island of Rodrigues	
	Male	Female	Male	Female	Male	Female

1944	143,056	67,136	75,920	265,247	136,382	128,865	10,882	6,808	4,074
1952	148,238	70,370	77,868	335,327	171,241	164,086	17,850	10,421	7,429

Note: Only for the 1962 and 1972 censuses each householder was asked to state the population group\community to which each member of his household claimed to belong .

Prior to 1962, it is probable that from one census to another, different criteria have been used in classifying the population by population groups.

Figures are therefore not strictly comparable from one census to another, before 1962.

Table 1.4(b) - Population enumerated at each census by community and sex - Republic of Mauritius¹, 1962 - 2011

Note:

- (i) Estimates are based on the 2011 Census population.
- (ii) Estimates of population at the district level and for Municipal Council Areas (MCA) have been updated by allowing for births, deaths and migration. However, in the case of Village Council Areas (VCA), the estimates have been obtained by assuming a rate of increase of population of the same order as for the geographical district of which they form part.
- (iii) The population estimates for Municipal Council Areas (MCA) and Village Council Areas (VCA) are given according to new boundaries as amended and gazetted in the Local Government Act 2011 (Act No. 36 of 2011) and the Representation of the People Act(GN no. 1 of 2012, 3rd January 2012)
- (iv) Part of village council areas that have no population, have not been listed in the table.

Note: The increase in the number of civil marriages as from 1982 is due largely to improved registration of religious marriages with the coming into force of a new Civil Status Act as from January 1982.

1/ excluding Agalega and Saint Brandon

Note:

(a) Urban population for 2006 to 2012 refers to the population in the five Municipal Council Areas defined according to proclaimed boundaries, altered in 1963

(Proclamation No. 12 and 13) and subsequently enlarged in 1965 - (Proclamation No. 23), in 1967 (Proclamation No. 2), in 1990 (Procl.No 8)

and in 1991 (Procl No 15)

(b) Figures as from year 2013 are according to new boundaries as amended and gazetted in the Local Government Act 2011 (Act No. 36 of 2011) and the Representation of the People Act(GN no. 1 of 2012, 3rd January 2012)

Fig 8 : Resident Mid-Year Population by MVCA - 2015

GLOSSARY

Population

De facto population: a population enumerated or estimated on the basis of those present at a particular time, including temporary visitors but excluding residents temporarily absent.

Resident (De jure) population: a population enumerated or estimated on the basis of normal residence, excluding temporary visitors but including residents temporarily absent.

Natural Increase: the excess of births over deaths.

Rate of Natural Increase: the difference between the births and deaths occurring during a year per 1,000 mid-year population. This rate is the difference between the "crude birth rate" and the "crude death rate".

Age structure

Dependency ratio: the combined child population (under 15 years) and population aged 65 years and over per 1,000 population of intermediate age (15 - 64 years) in a particular year.

Median age: the age which divides the population into two equal-size groups, one of which is younger and the other older than the median.

Fertility

Crude birth rate: the number of live births registered in a year per 1,000 mid-year population.

Age specific fertility rate: the number of live births to women of a specified age-group per 1,000 women in that age-group.

General fertility rate: the number of live births occurring in a year per 1,000 women aged (15 - 49) years at mid-year.

Total fertility rate: the average number of children born to an average woman assuming that she survives to the end of her child-bearing age and is subjected to a fixed schedule of age-specific fertility rates.

Gross reproduction rate: the average number of daughters born to an average woman assuming that she survives to the end of her child-bearing age and is subjected to a fixed schedule of age-specific fertility rates.

Net reproduction rate: the extent to which an average woman will replace herself, assuming a fixed schedule of age-specific mortality and fertility rates to prevail through her reproductive span of life.

Live birth order: the ordinal number of a given live birth in relation to all previous live births of the same woman.

Mortality

Crude death rate : the number of deaths in a year per 1,000 mid-year population.

Age specific death rate: the number of deaths of a specified age-group occurring in a year per 1,000 mid-year population in that age-group.

Infant death: death of an infant aged under one year.

Infant mortality rate: the number of infant deaths in a year per 1,000 live-births during the year.

Still birth: a child born after the twenty-eighth week of pregnancy and not breathing or showing any signs of life at any time after being completely expelled from the mother.

Still birth rate: the number of still births in a year per 1,000 total births (live births and still births) during the year.

Early neonatal mortality rate: the number of deaths of infants under 7 days of age in a year per 1,000 live births during the year.

Late neonatal mortality rate: the number of deaths of infants aged from 7 to 27 days in a year per 1,000 live births during the year.

Neonatal mortality rate: the number of deaths of infants aged less than 28 days in a year per 1,000 live births during the year.

Post neonatal mortality rate: the number of deaths of infants aged from 28 days to under one year in a year, per 1,000 live births during the year.

Perinatal mortality rate: the sum of the number of deaths of infants aged under 7 days and the number of still births in a year per 1,000 total births (live + still) during that year.

Expectation of live at birth (e_0): the average number of years that a new born child would be expected to live if subjected to the mortality conditions expressed by a particular set of age-specific death rates.

Marriage

Marriage rate: the number of persons married in a year per 1,000 mid-year population.

Divorce

Divorce rate: the number of persons divorced in a year per 1,000 mid-year population.

International Migration

Net migration: because of the absence of reliable data on immigrants and emigrants, the net migration is taken as the difference between international arrivals and departures of residents.

Net migration rate : the net migration in a year per 1,000 mid-year population.
