

**Quarterly Export Price Index (EPI)**  
**2<sup>nd</sup> Quarter 1998**  
**(Base Year 1993=100)**

## **1. Introduction**

This issue of the Economic and Social Indicators presents quarterly Export Price Indices for the second quarter of 1998 and revised figures for the year 1997 and the first quarter of 1998. The Export Price Index (EPI) provides a measure for price changes of exports. It is a measure of pure price changes (in Mauritian rupees) of domestically produced goods shipped to other countries. The base and reference period for the EPI is calendar year 1993.

A technical note on the construction of the EPI is annexed. Quarterly indices by Standard International Trade Classification (SITC Rev3), changes by index points, and percentage changes for each quarter are shown in the tables annexed.

## **2. Structure of the EPI**

The EPI is compiled using the Standard International Trade Classification of the United Nations (SITC Rev 3). The index comprises five sections namely: "*Food and live animals*", "*Crude materials, inedible, except fuels*", "*Chemicals and related products*", "*Manufactured goods classified chiefly by raw materials*" and "*Miscellaneous manufactured articles*". Distribution of weights for the different sections, groups of commodities and items are given in Table 1. In addition to the overall index, separate sub-indices are also calculated for different product categories at more detailed level.

## **3. Quarterly Changes (2<sup>nd</sup> quarter 1998)**

The export price index rose by 5.8 points from 133.6 in the first quarter of 1998 to reach 139.4 in the second quarter, representing an increase of 4.7%. The index was mostly influenced by a 4.7% increase in the export prices of "articles of apparel and clothing accessories" which carries about 60% of the total weight. Major increases were also registered in the prices of optical goods, watches and clocks (30.3%) and textile yarn, fabrics and made up articles (2.9%); but these items are of lesser importance in the basket.

Compared to the corresponding quarter of 1997, the index for the second quarter of 1998 rose by 10.5% with major increases in export prices of optical goods, watches and clocks (40.5%), cotton fabrics (15.4%), articles of apparel and clothing accessories

(14.3%), and other textile fabrics (12.5%). On the other hand, export prices of chemicals and related products fell by 4.2% and those of sugar by 2.5%

### **3.1 Sub-indices by section and commodity**

#### **Food and live animals**

“*Food and live animals*” carries about 31% of the total weight. Sugar accounts for 88% of the weight of this section and the remaining 12% comprises meat and meat preparations, fish and fish preparations, tea, molasses and cereal and cereal products.

During the second quarter of 1998, the index for *Food and live animals* rose slightly from 129.6 to 130.3 (0.5%). Commodity-wise, increases recorded in the export prices of tea (+19.2%), meat and meat preparations (+7.1%) fish and fish preparations (+4.5%) were offset by a fall of 13.1% in the export prices of cereal and cereal preparations.

When compared to the second quarter of 1997, the index for this section registered a fall of 0.8%, attributed mainly to a decrease of 2.5% in the export prices of sugar.

#### **Crude materials, inedible, except fuel**

The index for cut flowers, the only constituent of this section, fell by 3.5% compared to the first quarter of 1998 whereas when compared to the second quarter of 1997, it shows an increase of 21.3%.

#### **Chemicals and related products**

The index of this section which consists mainly of pharmaceutical products and fertilisers fell slightly from 97.3 in the first quarter of 1998 to 96.5 (0.8%). However, when compared to the corresponding period of 1997, the decline in export prices is more significant (4.2%).

#### **Manufactured goods classified chiefly by materials**

Export prices of goods in this section which consists mainly of textile fabrics rose by 2.9% mostly as a result of price increases in cotton fabrics (2.4%). When compared to the second quarter of 1997, the index went up by 14.9% with increases of 15.4% in prices of cotton fabrics and 12.5% in prices of other textile fabrics.

### **Miscellaneous manufactured articles**

This is the most important group of the index and carries about 65% of the total weight. It consists exclusively of articles of wearing apparel from the Export Processing Zone (EPZ).

Compared to the previous quarter, the index for this section rose by 6.3% as a result of export price increases ranging between 3.5% and 30.3% in almost all items of this section; the largest increase being registered for optical goods, watches and clocks. The only fall in prices (2.2%) concerned women's or girls' coats, jackets, suits, etc. knitted or crocheted.

The increase was more important when compared to the corresponding quarter of last year. In fact the index went up by 16.0% with rises in prices of all the constituents, varying between 10.4% and 40.5%.

## **Technical Note**

### **Export Price Index (EPI)**

#### **Methodology for the Construction of the EPI**

##### **Definition**

The Export Price Index (EPI) is a measure of price change of domestically produced Mauritian products shipped to other countries i.e. it excludes re-exports. In addition to the overall index, separate sub-indices are also calculated for different product categories at more detailed level.

##### **Comparison with Unit Value Index**

The Unit Value Export Index provides only a proxy measure for price changes of exported goods. It is derived from value and quantity data of products or groups of products obtained from trade returns and is thus highly dependent on the degree of homogeneity of the groups of products considered. On the other hand, the EPI measures pure price changes and is based on actual price measurements of relatively more homogeneous group of products. It requires elaborate specifications of products and takes account of all the main price determining factors such as country of destination, quality, mode of transport and mode of payment.

##### **Scope and Classification**

The EPI covers all domestic exports, the most important commodities being sugar, molasses, tea and textile fabrics and articles of apparel and clothing accessories produced by the EPZ sector.

The index is based on the Nomenclature of the Standard International Trade Classification of the United Nations (SITC Rev 3). Separate sub-indices are produced for each SITC section and for more detailed groups where possible.

##### **Selection of Items and Firms**

A representative sample of 42 firms has been selected from trade declarations submitted to the Customs and Excise Department in 1993. The sample was drawn from exporting firms on the basis of regularity of their trade and their volume of exports. A total of 119 items (Entry Level Items, ELI's) which represent 32 product groups are priced from the selected enterprises.

## **Weighting Scheme**

The weights are derived from the 1993 domestic exports. Weights assigned to each section and group are based on their export values in 1993. Each product or group of products selected for pricing purposes represents all products that fall within that weight group.

## **Base and Reference Period**

The base price as well as the reference period for the EPI is calendar year 1993. Bench mark data for the year 1993, based on trade returns, have been used to derive weights. The selected firms have supplied prices of selected commodities for each of the 12 months in 1993. The yearly average price of each product has then been worked out and is used as base price for that product.

## **Price Collection**

Prices are collected directly from co-operating export firms. As far as possible price quotations are reported on a free on board (F.O.B.) basis and are mostly contract prices. Each reporting firm is visited once every quarter but prices are supplied on a monthly basis and are averaged for each quarter.

## **Sugar and Molasses**

Due to their specificity, sugar and molasses have been treated differently. Sugar and molasses produced during a crop year, which normally extends between July and June of the following year, are usually exported during that same crop year. Export prices of these commodities, sugar in particular, are mostly negotiated prices. These prices can be quite volatile between quarters depending on the destination of the shipments. Therefore, in order to eliminate these price distortions between quarters, the same average yearly price for the crop year is used for the four quarters comprising that crop year. The base price of these commodities for the year 1993 is the average price for crops years 92/93 and 93/94.

## **Calculation of the EPI**

A modified Laspeyres formula based on the weighted average of price relatives is used to calculate the EPI: the mathematical form of the formula is shown below:

$$I_{ot} = \frac{\sum w_i \times \frac{P_{it}}{P_{io}} \times 100}{\sum w_i}$$

Where  $I_{ot}$  is the index for period t compared to base period 0

$w_i$  is the weight of the  $i^{\text{th}}$  element

$P_{io}$  is the base price of the  $i^{\text{th}}$  element

$P_{it}$  is the price of the  $i^{\text{th}}$  element in period t

$\frac{P_{it}}{P_{ot}}$  is the price relative of the  $i^{\text{th}}$  element in period t relative to base period 0

$\Sigma$  means summation over all selected elements

### Uses

The primary use of the EPI is to deflate export trade statistics. It provides quarterly measures of price trends of Mauritian products sold abroad and can be used for calculating changes in the volume of exports.

It can also serve as a basis to assess the competitiveness of Mauritian products in relation to price trends of common products of other countries with which Mauritius competes for markets.
