ANNEX

# PRODUCER PRICE INDEX - MANUFACTURING (PPI-M)

3rd Quarter 2005

## 1. Introduction

The Producer Price Index (PPI-M) measures changes in the effective prices received by producers for that part of their output, which is sold on the domestic market. It reflects the price trends of a constant basket of goods which represent the output of the selected industries.

The Central Statistics Office first published a Producer Price Index for the Manufacturing sector (Non-EPZ) in March 1994, with 1993 as reference period, but the coverage was then limited to the "Manufacture of food products, beverages and tobacco". The index has been revised in June 2002 to cover all relevant industry groups of the Non-EPZ manufacturing sector. However, figures according to this revision have been compiled since the base year, i.e. 1998.

This issue of the "Economic and Social Indicators" presents the Producer Price Indices for the manufacturing sector from 1998 to September 2005, broken down by 14 Divisions (2-digits level of the National Standard Industrial Classification of Economic Activities, NSIC). Producer Price Indices for the Divisions 15 and 16, "Manufacture of food products, beverages and tobacco", have been further subdivided by product group level and are given separately in Tables 5 to 8. Table 9 summarises the monthly indices for the manufacturing sector and Table 10, monthly sub-indices for the group "Manufacture of food products, beverages and tobacco". The methodology used for the calculation of the index is given in annex.

## 2. Producer Price Index (Year 1998 = 100)

### 2.1 *Monthly index*

The Producer Price Index, which stood at 137.8 in June 2005 rose to 140.7 in September 2005 following an increase of 2.4% in July, and decreases of 0.1% and 0.2% in August and September respectively (Table 1).

The 2.4% rise in the overall index in July was mainly due to increases in the sub-indices for "Manufacture of food products, beverages and tobacco" (+4.3%) and "Manufacture of basic metals" (+6.1%). The increase in the sub-index for "Food products, beverages and tobacco", which accounts for nearly 50% of the overall weight, was mainly the effect of price increases of tobacco products (+38.8%), prepared animal feeds (+7.7%) and meat and meat products (+6.3%).

In August, the overall index decreased by 0.1%. This was mainly due to a decrease in the sub-index for "Manufacture of basic metals" (-4.2%), partially offset by increases in the sub-indices for "Manufacture of food products, beverages and tobacco" (+0.1%) and "Manufacture of chemicals and chemical products" (+0.4%).

In September, the index decreased by 0.2% following decreases in the sub-indices for "Manufacture of basic metals" (-3.0%) and "Manufacture of food products, beverages and tobacco" (-0.2%). The 0.2% decrease in the sub-index for "Manufacture of food products, beverages and tobacco" was mainly due to lower prices of oil and fats (-1.8%).

The evolution of the monthly index by NSIC group for the period 1998 to 2004 is shown in Tables 2, 3, 6 and 7.

## 2.2 Quarterly Index

Table 4 gives the evolution of the Producer Price Index on a quarterly basis, the quarterly index being computed as the arithmetic mean of the monthly indices. The index, which worked out to 137.8 for the second quarter, increased to 141.0 for the third quarter of 2005. This 2.3% growth was mainly due to increases in the sub-indices for "Manufacture of food products, beverages and tobacco" (+4.3%), "Manufacture of wearing apparel" (+4.6%) and "Tanning, dressing of leather, manufacture of luggage, handbags, etc." (+6.1%), partly offset by a decrease in the sub-index for "Manufacture of basic metals" (-1.8%).

Within "Food products, beverages and tobacco", "Beverages and tobacco" went up by 6.1% mainly due to higher prices of tobacco products, and "Food products" by 3.0% mainly due to higher prices of meat and meat products (+6.5%) and prepared animal feeds (+7.7%). Details of changes are shown in Table 8.

Compared to the corresponding quarter of 2004, the overall index for the third quarter of 2005 went up by 6.7%, mainly due to increases in the sub-indices for the following industry groups: "Manufacture of food, beverages and tobacco" (+6.8%), "Manufacture of chemicals and chemical products" (+11.6%), "Manufacture of other non-metallic mineral products" (+7.1%) and "Manufacture of fabricated metal products" (+10.3%). These increases were partly offset by a decrease in the sub-index for "Manufacture of basic metals" (-5.3%).

Within "Manufacture of food products, beverages and tobacco", "Food products" increased by 5.0% and "Beverages and tobacco" by 9.2%. At a more detailed level, significant increases were noted in the prices of tobacco products (+38.8%), prepared animal feeds (+11.9%), spirits (+9.0%), meat and meat products (+7.6%) and dairy products (+15.6%). Other details on changes that have occurred during that period are given in Tables 4 and 8.

## ANNEX

### Methodology used in the computation of the Producer Price Index (PPI-M)

#### 1 Scope

The PPI-M covers all large establishments (that is those employing 10 or more persons) whose output is mainly sold on the domestic market, that is divisions 15 to 37 of the National Standard Industrial Classification of Economic Activities (NSIC).

#### 2 Weighting Scheme

The weights have been calculated from the gross output figures derived from the 1997 Census of Economic Activities. Gross output is valued at basic prices, and thus excludes all taxes on products, namely excise duties and value added tax. The weight of a product group represents the share of its gross output out of the total output of the manufacturing sector.

In the case of sugar, only the sale on the local market has been taken into consideration in establishing the weights.

#### 3 Reference Year

The reference year for the calculation of price relatives is 1998. The base price for a particular product is the arithmetic mean of the 12 monthly prices in 1998.

#### 4 Index Calculation

The PPI-M is calculated at the 5-digits level of NSIC. Indices at the Division level (2 digits NSIC) are then derived as a weighted average of the indices of the products falling within each division. Finally, the overall index for manufacturing is obtained as a weighted average of the Division indices.

The PPI is calculated according to a modified Laspeyre's formula, which is the weighted average of price relatives.

$$I_c = \frac{\sum W_i * \left(\frac{P_{ci}}{P_{oi}}\right)}{\sum W_i} * 100$$

where  $I_c$  = Index for current month

$W_i$  = Weight associated with product  $i$

$P_{ci}$  = Price of product  $i$  for the current month

$P_{oi}$  = Price for product  $i$  for the reference period (1998)
