

Labour force, Employment and Unemployment – Fourth quarter 2010

Introduction

1. This issue of Economic and Social Indicators (ESI) presents a set of estimates of labour force, employment and unemployment for the fourth quarter of 2010, based on the results of the Continuous Multi-Purpose Household Survey (CMPHS) from October to December 2010. The estimates refer to the Mauritian population aged 16 years and above.
2. Annual estimates of labour force including foreign workers derived after integrating data from CMPHS with other sources are given at Annex 3.

Key figures

	Q4 2009	Q3 2010	Q4 2010	Change	
				Q4 2010 - Q4 2009	Q4 2010 - Q3 2010
Labour force	572,200	586,600	579,300	+7,100	-7,300
Employment	536,400	542,200	537,700	+1,300	-4,500
Unemployment	35,800	44,400	41,600	+5,800	-2,800
Unemployment rate (%)	6.3	7.6	7.2	+0.9	-0.4
Seasonally adjusted unemployment rate (%)	7.2	7.8	8.1	+0.9	+0.3

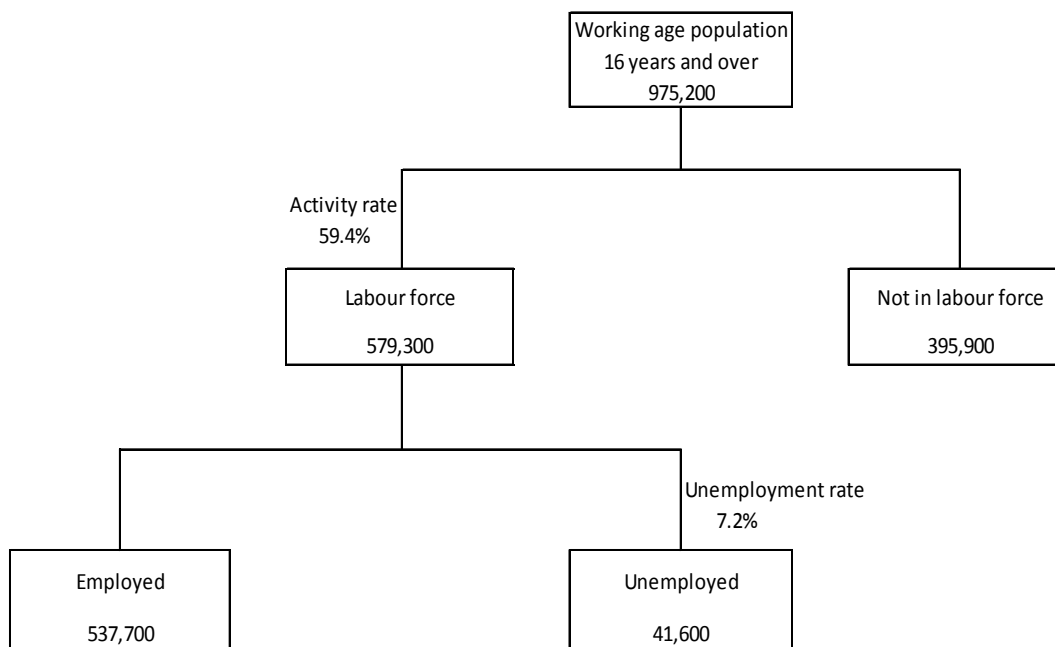

Employment and unemployment - Year 2010

	Year 2009	Year 2010	Change
Employment	524,800	536,100	+11,300
Unemployment	41,500	45,200	+3,700
Unemployment rate (%)	7.3	7.8	+0.5

Labour market overview, fourth quarter 2010

3. Compared with the corresponding quarter of 2009, there has been an increase in the labour force (+7,100) with a rise in both employment (+1,300) and unemployment (+5,800).
4. Compared with the previous quarter, labour force decreased by 7,300 with a respective drop of 4,500 and 2,800 in employment and unemployment.

Chart 1: The Labour Market, 4th quarter 2010

Labour force participation

5. The activity rate for fourth quarter 2010 was 59.4%, same as that of the corresponding period one year earlier. Male activity rate decreased by 0.4 percentage point to 75.8% while female activity rate increased by 0.5 percentage point to 43.7%.
6. Compared with the previous quarter, the activity rate decreased by 0.9 percentage point (from 60.3% to 59.4%) with a decrease in male activity rate by 1.1 percentage points and in female activity rate by 0.6 percentage point.

Employment

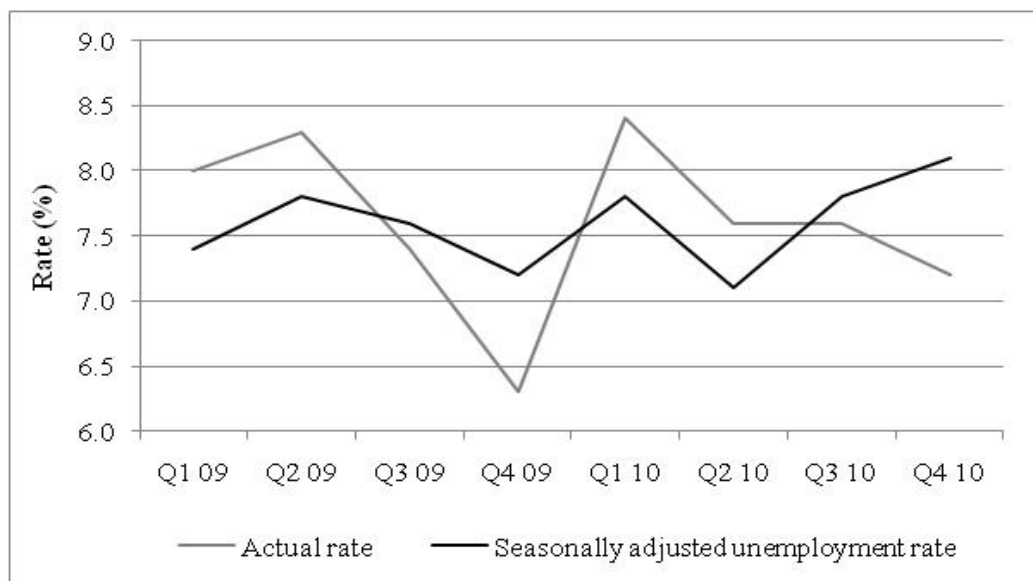

7. From fourth quarter 2009 to fourth quarter 2010, employment rose by 1,300 (+0.2%) to 537,700; male employment increased by 2,500 to 349,300 and female employment decreased by 1,200 to 188,400.
8. Compared with the previous quarter, employment decreased by 4,500 with a fall of 1,600 in male employment and 2,900 in female employment.

Unemployment

9. From fourth quarter 2009 to fourth quarter 2010, the number of unemployed persons increased by 5,800 to 41,600. This rise was the combined effect of an increase of 6,200 in the number of unemployed females and a decrease of 400 in the number of unemployed males.
10. The main characteristics of the unemployed as at fourth quarter 2010 were as follows:
 - (i) The 41,600 unemployed comprised 13,100 males (31%) and 28,500 females (69%).
 - (ii) Around 15,300 (37%) of them were aged below 25 years.
 - (iii) About 44% (18,400) of the unemployed were single. Among males, the majority (73%) was single while among females, the majority (69%) was ever married.
 - (iv) Some 9,000 or 22% had not reached the Certificate of Primary Education (CPE) level or equivalent and a further 16,700 (40%) did not have the Cambridge School Certificate (SC) or equivalent.
 - (v) Around 33,800 (81%) had been looking for work for up to one year and the remaining 7,800 (19%) for more than one year.
 - (vi) About 27,500 (66%) had working experience and 14,100 (34%) were looking for a job for the first time.
 - (vii) Around 17,600 (42%) were registered at the Employment Service.
 - (viii) There were 7,900 (19%) young persons aged 16 to 24 years, not yet married and looking for a first job. Some 2,800 (35%) of them had not passed SC.
 - (ix) Ever married (including widowed, divorced or separated) unemployed persons aged 25 to 44 years and having worked before numbered 11,100. Among them, about 8,600 (77%) had not passed SC.
 - (x) 4,400 or 11% of the unemployed were heads of households.
 - (xi) 4,000 (10%) lived in households with no employed persons.

11. The unemployment rate increased by 0.9 percentage point to 7.2% from fourth quarter 2009 to fourth quarter 2010. Female unemployment rate increased by 2.6 percentage points to 13.1% whilst male unemployment rate decreased by 0.1 percentage point to 3.6%.
12. When compared with third quarter of 2010, the number of unemployed persons decreased by 2,800 (-3,100 males and +300 females) and the employment rate by 0.4 percentage point.

Chart 2: Actual and seasonally adjusted unemployment rate by quarter, 1st quarter 2009 – 4th quarter 2010

13. Unemployment rate is usually higher in the first half of the year because of school leavers joining the labour market, and lower in the second half with more casual jobs being available mainly in the trade sector (street vendors, salespersons in shops, etc.) at the end of the year. In order to observe the real trend over time, adjustments have to be made for seasonal fluctuations. Seasonally adjusted unemployment rate for the fourth quarter of 2010 was 8.1%, higher than the rate of 7.8% for the third quarter of 2010 and 7.2% for the fourth quarter of 2009.

Economically inactive population

14. The number of persons aged 16 years and over, not forming part of the labour force (inactive population) was estimated at 395,900 at fourth quarter 2010.

15. Among them, 2,600 persons were not working and available for work but were not actively looking for work. These persons have not been classified as unemployed since they did not satisfy all the three criteria for unemployment, i.e. not working, looking for work and available for work. From the survey responses, about 46% of those inactives either believed that suitable jobs were not available or did not know where to look for work.
16. The inactive population was made up of 115,900 males and 280,000 females. Among inactive males, 42% were 'retired or old persons' and 41% were students. Among females, 61% were homemakers and 16% students.

Sampling errors

17. The estimates in this publication are based on the results of a sample survey and are thus subject to sample variability. Standard errors and confidence intervals give an indication of this variability.
18. The standard error of the estimates and the 95% confidence interval which represent a 95% chance that the true value lies within that interval, are given in the table that follows.

Estimated labour force, employment and unemployment by sex, 4th quarter 2009 –
4th quarter 2010

Both Sexes

		Estimates	Standard Error	95% confidence interval

NOTES

Release of Labour Force data

Labour Force statistics are compiled and published in the “Economic and Social Indicators” in March, June, September and December according to an advance calendar posted on the website of the Central Statistics Office (<http://statsmauritius.gov.mu>). This issue provides data for the fourth quarter 2010 compared to the same quarter a year ago.

However, where appropriate, historical series are also provided for the main indicators.

The CMPHS Survey methodology

Data collection

Face to face interviews of household members are carried out by qualified interviewers recruited by the office.

Frequency of data collection

Data collection is carried out monthly except in 2004 when it was carried out every quarter. Up to 2005, the reference period for data on labour force was the last week of the survey month. As from 2006, the reference week has been changed to the second week of the survey month so that estimates can be published within one quarter of the reference period, as required by the IMF Special Data Dissemination System (SDDS) to which the country expects to graduate by December 2011.

Scope and coverage of collection

All private Mauritian households in the islands of Mauritius and Rodrigues are covered.

Sampling method

A Stratified two-stage sampling design is used. At the first stage, Primary Sampling Units (PSUs) are selected with probability proportional to size and at the second stage, a fixed number of households is selected from each selected PSU.

Prior to 2005, the first stage stratification factors were urban, semi urban and rural geographical locations. As from 2005, the Relative Development Index (RDI) is used as the spatial stratification factor. This index is based on 12 variables encompassing housing and living conditions, literacy and education, and employment derived from the 2000 Housing and Population Census to rank PSUs. A set of RDIs for administrative regions has been published in the series "Economic and Social Indicators" - Issue No. 393.

The second stage stratification criteria are community, household size and average monthly expenditure of the household.

Sample size

From 1999 to 2003, around 6,500 households were covered each year. In 2004, the sample was increased to 8,640 so that reliable quarterly estimates of labour force, employment and unemployment could be worked out. As from 2005, the sample for the year has been further increased to 11,280. Furthermore, in order to measure quarterly changes, 50% of the households sampled in a quarter are re-interviewed in the following quarter; for example, 50% of the households sampled in the first quarter of 2005 have been re-interviewed in the second quarter of 2005.

Questionnaire

The CMPHS questionnaire comprises three modules: a basic module common to all rounds of the survey covering the general characteristics of the population (b) a second module covering labour force with in-depth investigation and a core set of questions which are kept constant at all rounds of the survey and (c) a third module grouping other topics of interest but investigated in less details.

Estimation and reliability of results

Estimates worked out from household survey data are inevitably subject to sampling variability since they are based on information collected from only a sample of households rather than from all households. The Standard Error (S.E) which is a measure of this variability, used to set confidence intervals for any estimate (whether a total or a rate) derived from the sample. For example, a 95% confidence interval indicates that there is 95% chance that the upper and lower limits of the interval enclose the true value (which would be obtained if all households had been surveyed). Standard errors and confidence intervals are calculated for the main labour force estimates.

Definitions

Household

A household is defined as either a person living on his/her own or a group of two or more persons, who may or may not be related, but who live together and make common provision for food and other essentials for living.

Employment

Employed population consists of Mauritians aged 16 years and above (16+) who have worked for pay, profit or family gain for at least one hour during the reference week of a month. It includes those who are temporarily absent from work for reasons such as leave with pay, leave without pay and temporary disorganisation of work (bad weather, break down of equipment, lack of order, etc.).

It is to be noted that as from year 2007, labour force estimates are based on population aged 16 years and above, following the amendment to the Labour Act in December 2006 whereby the minimum legal working age is 16 years, and the subsequent recommendation by the ILO to be in line with the amended Labour Act.

Unemployment

Unemployed population comprises all Mauritians aged 16+ who are not working but who are looking for work and are available for work during the reference period.

Labour force

Labour force or active population is made up of employed and unemployed population.

Unemployment rate

Unemployment rate is the ratio (%) of unemployment to labour force.

Inactive population

Inactive population includes all Mauritians aged 16+ years, not forming part of the labour force for reasons such as attendance at educational institutions, engagement in household duties, retirement, old age and infirmity/disablement.

Activity rate

Activity rate is the ratio (%) of labour force to population aged 16+ (active and inactive population).

Employer

An employer is a person who operates his/her own business or trade and hires one or more employees.

Own account worker

An Own account worker is a person who operates his/her own business or trade but does not hire employees. He/She may be working alone or with the help of contributing family workers.

Employee

An Employee is a person who works for pay for someone else, even in a temporary capacity.

Apprentice

An Apprentice is a person being trained for a job or trade and does not receive pay or may just receive some pocket money; an apprentice is considered as an employee.

Contributing family worker

A Contributing family worker is a person who works without pay in an enterprise operated by a family member.

Educational attainment

Primary: comprises persons who have studied up to a “Standard” between Standard 1 and the Certificate of Primary Education (CPE) or equivalent.

Secondary: comprises persons who have studied up to a “Form” between Form 1 and the Higher School Certificate (HSC) or equivalent.

Tertiary: comprises persons who in addition to their secondary educational certificates (SC and HSC or equivalent) also possess either a certificate/diploma (which is above the HSC but below a first degree) or a degree.

Note:

The above figures have been worked out in order to give a set of comparable labour force estimates obtained from different sources. Users are cautioned in the use of these figures given that there are differences related to the reference period, coverage and methodology. The different sources from which these estimates have been obtained are as follows:

- i CMPHS for Mauritian labour force estimates which are subject to sampling variability as mentioned at paragraph 17.
- ii The Annual Survey of Employment and Earnings (SEE) carried out in March of each year. Employment figures refer to jobs in large establishments employing 10 or more persons and include both Mauritians and foreign workers.
- iii Employment in 'other than large' establishments has been estimated after reconciling data from CMPHS, SEE and administrative sources.

¹ Unemployment figures and rate refer to Mauritians
