

Quarterly Export and Import Price Indices

3rd Quarter 2011
(Base year: 2007=100)

1. Introduction

The Export Price Index (EPI) provides an overall measure of pure price changes (in Mauritian rupees) of goods exported to other countries. The Import Price Index (IPI), on the other hand, measures pure price changes (in Mauritian rupees) of goods purchased from other countries.

This issue of Economic and Social Indicators presents a series of quarterly export and import price indices for the period third quarter 2009 to third quarter 2011 with 2007 as base year. The weights have been derived from exports and imports data for the base year, while the average import and export prices of representative items in 2007 have been used in the base year.

The methodology used and the weight structure are given in the technical notes at Annex.

2. Terms of trade (base year: 2007 = 100)

The terms of trade index is the ratio of export price index to import price index. A rise in this ratio indicates that the terms of trade have moved in favour of Mauritius. During the third quarter of 2011, exports and imports prices increased by 0.2% and 0.3% respectively when compared to the previous quarter. Consequently, the terms of trade remained at the same level (81).

Chart 1: Export and Import price indices, 3rd Quarter 2009 – 3rd Quarter 2011

3. Export Price Index (EPI) – (Tables 4-9)

3.1 Structure of the EPI

The EPI covers six sections of the SITC, namely “Food and live animals”, “Crude materials, inedible, except fuels”, “Animals and vegetables oils & fats” “Chemicals and related products”, “Manufactured goods classified chiefly by material” and “Miscellaneous manufactured articles”. Exports of goods falling under these sections covered 88.0% of total exports in base year 2007. In addition to the overall index, separate sub-indices are given for the different sections, groups of commodities and items product categories.

3.2 Changes in Export Price Index (3rd quarter 2011)

3.2.1 Overall Index

During the third quarter of 2011, the EPI increased slightly by 0.2% to reach 95.4 from 95.2 in the previous quarter. That was mainly due to increases in the prices of “Miscellaneous manufactured articles” (+0.6%) partly offset by a decrease in the prices of “Food and live animals” (-0.7%).

Compared to price levels in the corresponding quarter of 2010, the index was higher by 3.7%, explained mainly by price increases in “Miscellaneous manufactured articles” (+5.4%) and “Food and live animals” (+2.4%).

3.2.2 Sub-indices by section

Section 0: Food and live animals

During the third quarter of 2011, the sub-index for “Food and live animals” accounting for 34.5% of the total weight went down to 90.4 from 91.0 in the previous quarter, representing a fall of 0.7%. That was mainly due to a decrease of 1.7% in the export prices of “Fish and fish preparations”.

When compared to the corresponding quarter of 2010, the index rose by 2.4%, due to increases of 3.4% and 2.2% in the prices of “Fish and fish preparations” and “Sugars, sugar preparations and honey” respectively.

Section 2: Crude materials, inedible, except fuels

The index for “Crude materials, inedible, except fuels” increased by 7.5% from 112.4 in the second quarter of 2011 to 120.9 in the third quarter of 2011, as a result of a 7.5% rise in the export price of “Fresh cut flowers”.

Compared to the corresponding quarter of 2010, the index was 10.3% lower.

Section 4: Animal and vegetable oils, fats and waxes

During the third quarter of 2011, the index for “Animal and vegetable oils, fats and waxes” remained at the same level (111.1) of the second quarter of 2011.

Compared to the corresponding period of 2010, the index went up by 40.5%.

Section 5: Chemicals and related products

The export price index for “Chemicals and related products”, which stood at 88.6 in the second quarter of 2011, decreased by 0.6% to reach 88.1 in the third quarter of 2011.

Compared to the corresponding quarter of 2010, the index went up by 1.9%.

Section 6: Manufactured goods classified chiefly by material

Export prices of goods in this section, which consist mainly of textile fabrics, increased by 1.3% from 129.5 in the second quarter of 2011 to 131.1 in the third quarter of 2011. This rise is explained by higher prices of 7.6% in “Non-metallic mineral manufactures, n.e.s” and 0.3% in prices of “Manufactures of metal, n.e.s”.

Compared to the corresponding quarter of 2010, the index rose slightly by 0.4%, mainly as a result of a 21.0% rise in the export prices of “Non-metallic mineral manufactures, n.e.s”.

Section 8: Miscellaneous manufactured articles

“Miscellaneous manufactured articles” which consists mostly of articles of apparel and clothing accessories, is the most important section covered by the export price index as it carries about 55.2% of the total weight.

The index for “Miscellaneous manufactured articles” rose by 0.6% from 93.2 in the second quarter of 2011 to 93.7 in the third quarter of 2011 as a result of higher prices of “Articles of apparel and clothing accessories” (+0.4 %).

Compared to the corresponding quarter of 2010, the index was up by 5.4% due to higher prices of “Articles of apparel and clothing accessories” (+4.3%).

4. Import Price Index (IPI) (Tables 10 -16)

4.1 Structure of the IPI

The IPI covers nine out of the 10 Standard International Trade Classification (SITC, Rev.3) sections.

The only section not covered is “Commodities and transactions not classified elsewhere”, because of the heterogeneity of the products and the inherent difficulties in pricing items of a constant quality.

Thus, the index, either directly or indirectly, covers about 91.0% of merchandise imported during 2007. Sixty per cent of the items are directly represented. For those items which are not directly represented, the prices are considered to move similarly to those represented directly.

4.2 Changes in Import Price Index (3rd quarter 2011)

4.2.1 Overall Index

The Import Price Index (IPI) increased by 0.3% from 117.8 in the second quarter of 2011 to 118.2 in the third quarter of 2011. This was mainly the effect of increases in the prices of “Food and live animals” (+0.9%) and “Mineral fuels, lubricants and related materials” (+0.8%).

Compared to the corresponding period of 2010, the index went up by 6.2%, mainly as a result of increases in the prices of “Mineral fuels, lubricants and related materials” (+25.5%), “Food and live animals” (+9.7%) and “Manufactured goods classified chiefly by material” (+3.7%).

4.2.2 Sub-indices by section

Section 0: Food and live animals

The index for “Food and live animals”, representing about 18.1% of total weight, increased by 0.9%, from 123.7 in the second quarter of 2011 to 124.8 in the third quarter of 2011. Within the section, price increases were registered in “Vegetables and fruit” (+5.2%) and “Cereals and cereal preparations” (+1.6%), while decreases were noted in “Fish and fish preparations” (-3.0%) and “Dairy products and birds’ eggs” (-0.1%).

Compared to the third quarter of 2010, the index went up by 9.7%, mainly due to increases in the prices of “Fish and fish preparations” (+26.5%) and “Cereals and cereal preparations” (+3.5%).

Section 1: Beverages and tobacco

The index for “Beverages and tobacco” fell by 0.8%, from 137.4 in the second quarter of 2011 to 136.2 in the third quarter of 2011, as a result of price decreases of 2.3% in “Tobacco & tobacco manufactures”.

Compared to the corresponding period of 2010, the index rose by 0.4% due to price increases of 1.8% in the prices of “Tobacco & tobacco manufactures”.

Section 2: Crude materials, inedible, except fuels

The index for “Crude materials, inedible, except fuels” fell by 0.1% from 153.3 in the second quarter of 2011 to 153.2 in the third quarter of 2011, mainly as a result of a decrease of 7.4% in prices of “Textile fibres and their wastes”.

Compared to the corresponding period of last year, the index increased by 6.7%, attributable to an increase of 10.3% in the prices of “Textile fibres and their wastes”.

Section 3: Mineral fuels, lubricants and related materials

The index for “Mineral fuels, lubricants and related materials” with 20.0% of the total weight, increased by 0.8% from 139.3 in the second quarter of 2011 to reach 140.4 in the third quarter of 2011, mainly explained by an increase of 1.4% in the prices of “Petroleum, petroleum products and materials”.

Compared to the corresponding period of 2010, the index rose by 25.5%, mainly due to a price increase of 27.2% in “Petroleum, petroleum products and materials”.

Section 4: Animal and vegetable oils, fats and waxes

The index for “Animal and vegetable oils, fats and waxes” decreased by 6.2% from 152.9 in the second quarter of 2011 to 143.4 in the third quarter of 2011, mainly as a result of a fall of 6.2% in prices of “Fixed vegetable fats and oils, crude, refined or fractionated”

Compared to the corresponding quarter of 2010, the index showed an increase of 32.2% reaching 143.4 from 108.4.

Section 5: Chemical materials and related products, not elsewhere specified (n.e.s)

The index for “Chemical materials and related products, n.e.s” increased by 4.5% in the third quarter of 2011 from 105.4 in the second quarter of 2011 to 110.2. Price increases were registered in “Plastics in primary forms” (+11.3%).

The index rose by 3.5% when compared to the corresponding period of last year.

Section 6: Manufactured goods classified chiefly by material

In the third quarter of 2011, the index for “Manufactured goods classified chiefly by material” stood at 110.1, which represents a decrease of 1.2% over the previous quarter figure of 111.4. This was mainly attributable to a fall in prices of “Textile yarn, fabrics, made-up articles n.e.s” (-7.3%).

Compared to the corresponding quarter of 2010, the index went up by 3.7%, mainly due to price increases in “Non-metallic mineral manufactures, n.e.s” (+15.2%) and “Textile yarn, fabrics, made-up articles n.e.s” (+0.8%).

Section 7: Machinery and transport equipment

The index of “Machinery and transport equipment” with 18.0% of total weight reached 96.4 in the third quarter of 2011, showing a decrease of 0.8% over the previous quarter figure of 97.2. This was mainly due to decreases of 5.4% and 0.7% in the prices of “General industrial machinery & equipment, n.e.s” and “Electrical machinery, apparatus and appliances, n.e.s” respectively.

Compared to the corresponding quarter of 2010, the index fell by 12.7%, mainly attributable to price decreases of 39.5% in “Telecommunications and sound recording and apparatus”.

Section 8: Miscellaneous manufactured articles

The index of “Miscellaneous manufactured articles” rose by 1.1% in the third quarter of 2011 reaching 109.1 from 107.9 in the second quarter of 2011. This is mainly attributable to increases in prices of “Miscellaneous manufactured articles, n.e.s” (+2.1%).

Compared to the corresponding quarter of 2010, the index went down by 1.0%, mainly due to lower prices of 9.5% in “Photographic apparatus, equipment and supplies and optical goods, n.e.s, watches and clocks”.

5. Past trends

As indicated earlier, EPI and IPI in this publication are not strictly comparable with previously published series worked out using 2003 as base year. Chain linked export and import price indices using 2007 as the base year have been worked out using appropriate conversion factors and are presented in Tables 9 and 16 respectively.

ANNEX**Technical Note****Export Price Index (EPI)****Methodology for the Construction of the EPI****Definition**

The Export Price index (EPI) provides an overall measure of pure price changes in Mauritian Rupees of goods exported to other countries. This index is constructed from the export prices of a "constant" well-defined representative basket of products selected from trade data in the base year, that is, in 2007.

The first series of EPI was calculated with year 1993 as base and reference period. It was subsequently rebased in 1997, 2003 and 2007.

Scope and Classification

The index is based on the Nomenclature of the Standard International Trade Classification of the United Nations (SITC Rev 4). Separate sub-indices are produced for each SITC section and for more detailed groups where possible.

The EPI covers domestic exports and re-exports, the most important commodities being sugar, textile fabrics, articles of apparel and clothing accessories.

However, some commodities were excluded in the computation of the weights, because of their heterogeneity and the inherent difficulties in pricing the items to a constant quality. These were precious stones, jewellery, recorded media and free publications, and all products classified within the Sections 1, 3, 7 and 9 of the SITC; together, they accounted for around 12% of total exports.

The index thus covers about 88% of the value of merchandise exported during 2007. Items directly represented (price movements followed), constitute 75% of the total value of exports. For the other 13% not directly represented, their prices are considered to move similarly to those represented directly.

Selection of Items to be priced and Outlets

A representative sample of 25 exporting companies (outlets) was selected from trade declarations submitted to the Customs Department in 2007 for the pricing of the commodity items. The sample consists of major exporting companies trading on a regular basis. The selected companies are visited each quarter to collect the required prices.

A total of 65 items, representing 30 commodities were selected for pricing on the basis of regularity of trade and share in total exports, the most important ones being sugar, textile fabrics, and articles of apparel and clothing accessories. Specifications of items to be

priced (physical and qualitative) were established in collaboration with the selected exporting companies to ensure that same items are priced every quarter. Specifications include: pricing basis, contract basis, country of destination, unit of measurement, mode of transport, terms of payment, currency and any other conditions like quality and quantity of the product, that have a bearing on the price.

Weighting Scheme

The weights have been derived from the 2007 total exports. Weights assigned to each section, division, group and commodity are based on their export values in 2007. Items selected for pricing purposes represent all commodities that fall within that weight group.

Changes in the weights from 2003 to 2007

The changes in weights at section level are shown in the table below.

Section	Description	2003	2007
	All sections	10,000	10,000
Section 0	Food and live animals	2,942	3,445
Section 2	Crude materials, inedible, except fuels	31	37
Section 4	Animal and vegetable oils, fats and waxes	-	9
Section 5	Chemical materials & related products, n.e.s	21	233
Section 6	Manufactured goods classified chiefly by material	293	759
Section 8	Miscellaneous manufactured articles	6,713	5,517

It is noted that the weights of “Food and live animals”, and “Manufactured goods classified chiefly by material” have increased in the new weight structure due to their growing importance while the increase in the weights of “Chemicals and related products” was a result of the introduction of medicinal and pharmaceutical products in the index basket.

Base and Reference Period

Both the base period (period to which weights refer) and the reference period (index=100) for the EPI are the calendar year 2007. Export data for year 2007 have been used to derive the weights while the yearly average prices were used as reference year prices. The quarterly average prices have also been used to calculate the quarterly indices for the reference year.

Price Collection

Selected companies are visited once every quarter, but prices are collected for each month of the quarter and quarterly averages worked out for the computation of the price

indices. Some 65 price quotations are collected each month. These prices are reported on a free on board (F.O.B.) basis and are mostly contract prices.

Sugar

Due to its specificity, sugar has been treated differently. Sugar produced during a crop year, which normally extends from July to June of the following year, is usually exported during the same crop year. The export prices are mostly negotiated prices. These prices can be quite volatile between quarters, depending on the destination of the shipments. Therefore, in order to eliminate these price distortions between quarters, the same average yearly price for the crop year is used for the four quarters of that crop year. It is to be noted that the base year price of sugar is the average price for crop years 2006/07 and 2007/08.

Uses of the EPI

The EPI is mainly used as price deflators for exports. It shows changes in the prices of Mauritian products sold abroad and can be used for calculating changes in the volume of exports.

It also serves as a basis to assess the competitiveness of Mauritian products in relation to price trends of common products of other countries with which Mauritius competes for markets.

Calculation of the EPI

The lowest level (SITC 7 digit) indices are calculated as a geometric average of the price relatives of the basic observations. A modified Laspeyres formula, based on the weighted average of price relatives, is used to calculate higher level indices. The mathematical

$$I_{ot} = \frac{\sum w_i \times \frac{P_{it}}{P_{io}} \times 100}{\sum w_i}$$

form of the formula is shown below:

Where I_{ot} is the index for period t compared to base period 0

w_i is the weight of the i^{th} element

P_{io} is the base price of the i^{th} element

P_{it} is the price of the i^{th} element in period t

$\frac{P_{it}}{P_{io}}$ is the price relative of the i^{th} element
in period t relative to base period 0

Σ means summation over all selected elements

Import Price Index (IPI)

Methodology for the Construction of the IPI

Definition

The Import Price Index (IPI) provides an overall measure of pure price changes (in Mauritian Rupees) of goods imported into the country.

The IPI is based on actual price measurements of a fixed basket of imported goods. It requires elaborate specifications of products and takes into account the main price determining factors such as country of origin and quality.

The first IPI was calculated with the year 2003 as reference and 2002 as base year. The new index is calculated with 2007 as base and reference year.

Scope and Classification

The commodities are classified according to the United Nations Standard International Trade Classification (SITC Rev 4). Sub-indices are produced for each SITC section and for more detailed groups where possible.

For the computation of weights, some commodities accounting for around 9% of total imports in 2007 were excluded because of their heterogeneity and the inherent difficulties in pricing the items to a constant quality. These were: precious stones, jewellery, cellular telephones, recorded media and free publications, aircraft, helicopters and marine vessels, certain machine parts, textile wastes and Section 9 of the SITC described as “Commodities and transactions not classified elsewhere”.

Thus, the index covers about 91% of the value of merchandise imported during 2007. Items directly represented (price movements followed), constitute around 60% of the total value of imports. For the other 31% not directly represented, their prices are considered to move similarly to those represented directly.

Selection of Items to be priced and Outlets

The commodities forming the basket were selected according to the following criteria:

- (i) As far as possible, an item is included if it is imported regularly and frequently
- (ii) The items selected had to be, to a large extent, representative of the bulk of the trader’s import
- (iii) There must be a sustained demand of the commodity variety
- (iv) Items had to be specific and detailed enough for pricing.

Similarly, an importer for a particular product is selected provided that he imports that product on a regular basis.

Detailed characteristics (physical and qualitative) of items to be priced were established in collaboration with the importers so that the price quotations from period to period refer to the same items. The following are some commodity specifications: pricing basis, country of importation, unit of measurement, mode of transport, terms of payment, currency and any other conditions like quality and quantity of the product that have a bearing on the price

At the end of the process, some 139 commodity items and 220 outlets were selected for subsequent pricing.

Weighting scheme

The weights were derived from total imports in 2007. Weights assigned to each section and group are based on their import values in that year. Products or group of products selected for pricing purposes represent all products that fall within that weight group.

Changes in the weights from 2003 to 2007

The changes in weights at section level are shown in the table below.

Section	Description	2003	2007
	All sections	10,000	10,000
Section 0	Food and live animals	1,621	1,808
Section 1	Beverages and Tobacco	-	138
Section 2	Crude materials, inedible, except fuels	221	288
Section 3	Mineral fuels, lubricants and related materials	1,789	2,004
Section 4	Animal and vegetable oils, fats and waxes	113	104
Section 5	Chemical materials & related products, n.e.s	467	851
Section 6	Manufactured goods classified chiefly by material	3,776	2,141
Section 7	Machinery and transport equipment	1,134	1,800
Section 8	Miscellaneous manufactured articles	879	866

The main changes were:

- (i) "Manufactured goods classified chiefly by material" declined by 1,635 from 3,776 in 2003 to 2,141 due to lower imports of textile yarn, paper and paperboard and cotton fabrics
- (ii) "Machinery and transport equipment" increased by 666 from 1,134 in 2003 to 1,800 as a result of higher imports.

Base and Reference Period

Both the base period (period to which weights refer) and the reference period (index=100) for the IPI are the calendar year 2007. Import data for year 2007 have been used to derive the weights while the yearly average prices were used as reference year prices. The quarterly average prices have also been used to calculate the quarterly indices for the reference year.

Price collection

There are two common practices for the collection of prices of items falling in the basket. Prices for the specified goods are collected each month from importers and average quarterly prices are then derived for compiling the index, or, in case where most imports occur at intervals longer than a month, prices are collected only once every quarter and refer to the last consignment. A preliminary survey of the importers has shown that, in the case of Mauritius, the second practice is more suitable.

Prices are reported on a cost, insurance and freight (c.i.f) basis and are expressed in Mauritian Rupees. Exchange rates from the Customs and Excise Department are used in case prices are reported in foreign currencies.

Though the frequency of imports has been taken into consideration in selecting items and importers, it may happen that some items in the basket have not been imported during a certain period. In such cases, the prices are estimated using the variations in the exchange rate of the currency of imports. The underlying assumption is that the only factor affecting the price is the value of the Mauritian Rupee relative to the transaction currency. However, for items that would no longer be imported, they would have to be substituted by similar items.

Petroleum products and rice

It is to be noted that for petroleum products, the index is calculated differently given that these products, namely gasoline, gas oil, aviation fuel, fuel oil, LPG are now imported more than once during a quarter. All prices available for the quarter are collected and an average price for the quarter is computed.

The above pricing system is also applicable for rice , imported by the STC.

Uses of the Import Price Index

The Import Price Index is an important economic indicator which is used, inter alia, to:

- (i) measure changes in prices of imports
- (ii) analyse the effect of import price changes on the various sectors of the economy
- (iii) calculate changes in the volume of imports
- (iv) calculate the terms of trade (that is the ratio of export prices to import prices)
- (v) analyse the effect of exchange rates on import prices.

Calculation of the IPI

The lowest level indices are determined as a geometric average of the price relatives of the basic observations. A modified Laspeyres formula, based on the weighted average of price relatives, is used to calculate higher level indices.

The mathematical form of the formula is shown below:

$$I_{ot} = \frac{\sum W_i \times \frac{P_{it}}{P_{io}} \times 100}{\sum W_i}$$

Where I_{ot} is the index for period t compared to base period 0

w_i is the weight of the i^{th} element

P_{io} is the base price of the i^{th} element

P_{it} is the price of the i^{th} element in period t

$\frac{P_{it}}{P_{io}}$ is the price relative of the i^{th} element
in period t relative to base period 0

Σ means summation over all selected elements
