## PRODUCER PRICE INDEX - MANUFACTURING (PPI-M)

## $3^{\text {rd }}$ Quarter 2011

## 1. Introduction

This issue of the "Economic and Social Indicators (ESI)" presents a series of the PPI-M for the period from January 2007 to September 2011.

The Producer Price Index (PPI-M) measures changes in the effective prices received by producers of the Manufacturing sector for that part of their output, which is sold on the domestic market. It reflects the price trends of a constant basket of goods, representative of the output of these manufacturing industries. Its coverage, therefore, excludes Export Oriented Enterprises whose outputs are usually meant for export.

The methodology for compiling the PPI-M is based on the current level of prices while keeping the weights constant as at a particular base year which is updated, usually every five years. The weights for the PPI-M has been updated based on the results of the 2007 Census of Economic Activities and the index is computed with year 2007 as base period $(2007=100)$.

The index is compiled and presented for 17 Divisions (2-digits level of the National Standard Industrial Classifications of all Economic Activities, NSIC). To meet demands of users for indices at more detailed level, the following divisions have been further disaggregated to present the index at finer levels of industrial classifications:
(a) Division 15 - "Manufacture of food products and beverages", (b) Division 24 - "Manufacture of chemicals and chemical products" and (c) Division 26 - "Manufacture of other non-metallic mineral products".

The monthly indices for the last 12 months (October 2010 to September 2011) are given in Table 1. Tables 2 to 5 present the monthly indices for 2010, 2009, 2008 and 2007 respectively while the PPI-M for each quarter of 2009, 2010 and the first three quarters of 2011 are given at Table 6.

Comparative monthly and quarterly indices for the manufacturing sector as well as for Division 15 "Manufacture of food products and beverages" for the period from January 1999 to September 2011 are given at Table 7. The methodology used for the calculation of the index is given in annex.
2. $\quad$ Producer Price Index (Year $2007=100$ )

### 2.1 Monthly Index

### 2.1.1 Manufacturing Sector

The Producer Price Index for the manufacturing sector, which stood at 123.2 in June 2011, registered a net increase of 1.1 points $(+0.9 \%)$ to reach 124.3 in September 2011. The index gained 0.5 point $(+0.4 \%)$ in July, 0.3 point ( $+0.2 \%$ ) in August and 0.3 point ( $+0.2 \%$ ) in September 2011 (Table 1a).

In July, the overall index increased by $0.4 \%$ due to higher prices in "Manufacture of chemicals and chemical products" (+2.7\%), "Manufacture of food products and beverages" ( $+0.3 \%$ ), "Manufacture of furniture, and manufacturing n.e.c" (+2.8\%), "Publishing, printing and reproduction of recorded media" (+1.2\%) and "Manufacture of fabricated metal products" (+0.9\%), partly offset by decreases in "Manufacture of basic metals" (-8.2\%) and "Manufacture of other non-metallic mineral products" (-0.3\%).

The index registered an increase of $0.2 \%$ in August. This was due to higher prices in "Manufacture of food products and beverages" (+0.4\%), "Manufacture of furniture, and manufacturing n.e.c" (+1.2\%), "Manufacture of textiles" ( $+2.9 \%$ ) and "Manufacture of chemicals and chemical products" $(+0.1 \%)$, partly offset by a decrease in "Manufacture of basic metals" (-0.3\%).

Fig 1: Overall monthly indices October 2010 - September 2011 Manufacturing sector

The index registered an increase of $0.2 \%$ in September. This was due to higher prices in "Manufacture of food products and beverages" ( $+0.4 \%$ ), "Manufacture of rubber and plastic products" ( $+0.3 \%$ ) and "Manufacture of fabricated metal products" (+0.2\%), partly offset by a decrease in "Manufacture of other transport equipment" (-2.4\%).
As shown graphically in Fig. 1, a fairly steady rise is noted from October 2010 to January 2011 followed by a sharp rise up to February 2011. A decrease is then noted from February to March 2011 followed by a steady rise from March 2011 to September 2011.

## Month and Year

### 2.1.2 Manufacture of Food and Beverages

The activity group "Manufacture of food products and beverages" accounts for $51.4 \%$ of the overall weight of the manufacturing sector. The index for this activity group increased by 0.4 point ( $+0.3 \%$ ) in July, 0.5 point ( $+0.4 \%$ ) in August and 0.5 point ( $+0.4 \%$ ) in September (Table 1b).
The $0.3 \%$ increase in the index of July was explained by increases in "Manufacture of dairy products" ( $+4.5 \%$ ), "Manufacture of grain mill products" ( $+0.5 \%$ ), "Manufacture of bakery products" ( $+0.6 \%$ ) and "Manufacture of other food products" ( $+0.7 \%$ ).
The $0.4 \%$ increase in the index of August was due to higher prices in the following subindices: "Production, processing and preservation of meat and meat products" ( $+1.6 \%$ ), "Processing and preservation of fruits and vegetables" ( $+4.8 \%$ ) and "Manufacture of other food products" ( $+1.6 \%$ ), partly offset by a decrease in "Manufacture of grain mill products" ( $-0.3 \%$ ).
The $0.4 \%$ increase in September was due to higher prices in the following sub-indices: "Manufacture of grain mill products" (+2.2\%), "Production, processing and preservation of meat and meat products" ( $+0.9 \%$ ) and "Manufacture of other food products" ( $+0.2 \%$ ).

Fig 2: Overall monthly indices October 2010 - September 2011 Food products and Beverages

### 2.1.3 Manufacture of chemicals and chemical products

The sub-index "Manufacture of chemicals and chemical products", which accounts for $9.5 \%$ of the overall weight, increased by 3.4 points ( $+2.7 \%$ ) in July, gained 0.2 point ( $+0.1 \%$ ) in August and remained unchanged in September (Table 1c).
2.1.4 Manufacture of other non-metallic mineral products

The activity group "Manufacture of other non-metallic mineral products" contributes around $11.7 \%$ of the total weight of the manufacturing sector. The index pertaining to this group decreased by 0.4 point ( $-0.3 \%$ ) in July and remained unchanged in August and September (Table 1c).

### 2.2 Quarterly Index

### 2.2.1 Manufacturing Sector

Table 6a gives the evolution of the Producer Price Index on a quarterly basis, the quarterly index being computed as the arithmetic mean of the monthly indices. The index, which was 122.8 in the second quarter of 2011 , went up by 1.2 points ( $+1.0 \%$ ) to attain 124.0 in the third quarter of 2011. This was due to higher prices in "Manufacture of food products and beverages" (+0.7\%), "Manufacture of chemicals and chemical products" (+2.8\%), "Manufacture of furniture, and manufacturing n.e.c" (+3.6\%), "Manufacture of wearing apparel" (+5.4\%), "Publishing, printing and reproduction of recorded media" $(+1.2 \%)$, "Manufacture of basic metals" ( $+2.1 \%$ ) and "Manufacture of fabricated metal products" (+0.9\%), partly offset by decreases in "Manufacture of wood, wood products and cork except furniture" (-6.8\%) and "Manufacture of other non-metallic mineral products" (-0.3\%).

Fig 3: Overall quarterly indices, $2{ }^{\text {nd }}$ Quarter 2010 to $3^{\text {rd }}$ Quarter 2011
Manufacturing sector

Quarter and Year

Compared to the corresponding quarter of 2010, the overall index for the third quarter of 2011 moved up by 8.4 points ( $+7.3 \%$ ). This was attributable to increases in "Manufacture of food products and beverages" (+8.4\%), "Manufacture of other non-metallic mineral products" (+6.7\%), "Manufacture of chemicals and chemical products" ( $+5.5 \%$ ), "Manufacture of furniture, and manufacturing n.e.c" ( $+10.7 \%$ ), "Publishing, printing and reproduction of recorded media" (+5.5\%), "Manufacture of wearing apparel" (+18.3\%), "Manufacture of rubber and plastic products" (+4.4\%) and "Manufacture of electrical machinery and apparatus" (+22.9\%), partly offset by decreases in "Manufacture of wood, wood products and cork except furniture" (-17.9\%), "Manufacture of other transport equipment" (-4.9\%) and "Manufacture of basic metals" (-0.1\%).

### 2.2.2 Manufacture of Food and Beverages

Within "Manufacture of food products and beverages", "Manufacture of food products" gained 1.3 points ( $+1.1 \%$ ) compared to the previous quarter of 2011 (Table 6 b ). This was explained by higher prices in "Production, processing and preservation of meat and meat products" ( $+1.4 \%$ ), "Manufacture of dairy products" $(+4.5 \%)$, "Manufacture of grain mill products" ( $+1.3 \%$ ), "Processing and preservation of fruits and vegetables" (+3.2\%), "Manufacture of other food products" (+2.1\%), "Processing and preservation of fish and fish products" ( $+1.7 \%$ ) and "Manufacture of bakery products" (+0.6\%).

The index for "Manufacture of beverages" remained unchanged.

Fig 4: Overall quarterly indices: $2^{\text {nd }}$ Quarter 2010-3 ${ }^{\text {rd }}$ Quarter 2011 Food products and Beverages

Within "Manufacture of food products and beverages", "Manufacture of food products" registered an increase of 10.7 points ( $+9.5 \%$ ) and "Manufacture of beverages" 6.9 points (+6.0\%) compared to the corresponding quarter of 2010. At a more detailed level, increases were noted in "Manufacture of grain mill products" (+19.9\%), "Manufacture of vegetable and animal oils and fats" (+29.5\%), "Manufacture of prepared animal feeds" (+11.6\%), "Distilling, blending \& bottling of spirit" (+8.0\%), "Beer" ( $+4.3 \%$ ), "Production, processing and preservation of meat and meat products" (+1.4\%), "Manufacture of dairy products" (+6.9\%), "Soft drinks" (+5.4\%) and "Wine" (+9.2\%).

### 2.2.3 Manufacture of chemicals and chemical products

The index increased by 3.6 points (+2.8\%) compared to the previous quarter of 2011 (Table 6c). This was due to increases in "Manufacture of soap, detergents and cleaning preparations and cosmetics" (+6.4\%). Compared to the corresponding quarter of 2010 , the index moved up by 6.9 points ( $+5.5 \%$ ) due to higher prices in "Manufacture of soap, detergents and cleaning preparations and cosmetics" (+8.5\%) and "Manufacture of ink, paints etc" (+5.2\%).

### 2.2.4 Manufacture of other non-metallic mineral products

The index registered a decrease of 0.4 point ( $-0.3 \%$ ) compared to the second quarter of 2011 mainly due to decreases in "Manufacture of glass and glass products" ( $-13.1 \%$ ). Compared to the corresponding quarter of 2010, the index went up by 8.4 points ( $+6.7 \%$ ) as a result of higher prices in "Manufacture of articles of concrete" $(+11.4 \%)$ and higher prices in activities related to stone crushing ( $+6.1 \%$ ), partly offset by decreases in "Manufacture of glass and glass products" (-13.2\%).

### 2.3 Yearly Index

The yearly averages since year 1999 for the sector and the group "Manufacture of food products and beverages" are shown in Tables 7(a) and 7(b) respectively. The yearly overall index for 2010 was 115.1 i.e 2.7 points ( $+2.4 \%$ ) higher than the figure of 112.4 in 2009. The yearly average for "Manufacture of food products and beverages" in 2010 was 113.8 compared to 113.2 in 2009, i.e., an increase of 0.6 point (+ $0.5 \%$ ).

## TECHNICAL NOTES

## Producer Price Index - Manufacturing (PPI-M)

## 1. Definition

The Producer Price Index (PPI-M) measures changes in the effective prices received by manufacturers for that part of their output which is sold on the domestic market. The index covers manufacturing establishments which supply their products on the domestic market.

It normally refers to a family of indices which includes:
(a) Industry output prices indices
(b) Detailed commodity price indices, and,
(c) Stage-of-processing prices indices

The concepts and definitions of the PPIs largely follow internationally accepted standards (PPI Manual of the International Monetary Fund).

## 2. Scope

The PPI-M covers all large manufacturing establishments (that is those employing 10 or more persons) falling within divisions 15 to 37 of the National Standard Industrial Classification of all Economic Activities (NSIC 1990), whose output is mainly sold on the domestic market.

The index therefore excludes enterprises classified under Export Oriented Enterprises (EOE). These comprise enterprises formerly holding an EPZ certificate as well as those manufacturing goods for export and holding a registration certificate issued by the Board of Investment. Moreover the following divisions have been excluded in the compilation for reasons given below:
(a) Division 16: Manufacture of tobacco products (no longer manufactured in Mauritius)
(b) Division 23: Manufacture of coke, refined petroleum products and nuclear fuel (not produced in Mauritius)
(c) Division 30: Manufacture of office, accounting and computing machinery (weight in the overall index is not significant and change of products is too dynamic)
(d) Division 32: Manufacture of radio, television and communication equipment and apparatus (weight in the overall index is not significant and change of products is too dynamic)
(e) Division 33: Manufacture of medical, precision and optical instruments, watches and clocks (weight in the overall index is not significant and change of products is too dynamic)

Considering the above adjustments, the activities covered by the index represent around $97 \%$ of the gross output generated by enterprises in the Non-EOE manufacturing in 2007.

## 3. Reference Year

PPI-M has 2007 as reference period and is based on 2007 weights.

## 4. Frame

A list of some 450 establishments, engaging 10 persons or more, falling within the scope of the PPI-M was obtained from the 2007 CEA and classified at 5-digit NSIC. Data on Gross Output for each establishment was also available.

## 5. Selection of establishments (producers)

A sample of 113 establishments was drawn from the list. These establishments are the most important ones in terms of Gross Output (GO) in their respective 5-digit NSIC activity group. Establishments selected in each activity group contribute together at least 60\% of GO in that group.

Using the scheme above the overall sample contributes around $65 \%$ of the GO of the sector.

## 6. Selection of products to be priced

From each selected establishment the product(s) selected for pricing are those which are the most important ones in terms of contribution to the turnover of the establishment.

## 7. Prices collection

Prices collected refer to the prices received by producers for the sale of their products on the local market. The prices exclude all taxes on products, namely excise duty and value added tax.

Prices of products are collected from the sample of products mentioned in Para. 6. Producers are contacted on field on a quarterly basis and prices of the selected products are collected for each month of the reference quarter. For example, if reference quarter is $3^{\text {rd }}$ Quarter, producers are contacted during the month of October and November and prices are collected for the months of July, August and September.

Altogether some 315 prices are collected every quarter.

## 8. Updating of weights

### 8.1 Historical background

The Central Statistics Office first published a Producers Price Index limited to the "Manufacturing of food products, beverages and tobacco" in March 1994 with 1993 as reference period $(1993=100)$. The coverage of the index was extended in June 2002 to cover all relevant industry groups of the former Non-EPZ manufacturing sector. At the same time, in order to reflect changes in the production pattern, the basket of goods used to compile the index was updated based on data available from the 1997 Census of Economic Activities conducted by this office. The base year was subsequently revised to 1998 (1998 =
100). The revision was once again repeated in 2006 when the base period was revised to 2003 (2003 = 100).

The basket of goods has been updated based on the results of the 2007 Census of Economic Activities and the index is computed with year 2007 as base period (2007=100).

## 9. Index Calculation

The PPI-M is computed according to the Laspeyres Formula. The method used previously was a weighted geometric average of price relatives. However the formula for compiling the index has been changed from a weighted geometric average of price relatives to a weighted arithmetic one. The difference in the results between the two methods is marginal.

The formula used is given below

$$
\mathrm{I}_{\mathrm{c}}=\frac{\sum \mathrm{W}_{\mathrm{i}} *\left(\frac{\mathrm{P}_{\mathrm{ci}}}{\mathrm{P}_{\mathrm{oi}}}\right)}{\sum \mathrm{W}_{\mathrm{i}}} * 100
$$

Where Ic = Index for current month
$\mathrm{Wi}=$ Weight associated with product i
Pci $=$ Price of product i for the current month
Poi = Price for product i for the base period (2007)

The PPI-M is calculated at the 5-digits level of NSIC by the above formulae. Indices at the Division level (2 digits NSIC) are then derived as a weighted average of the indices of the products falling within each division. Finally, the overall index is obtained as a weighted arithmetic average of the Division indices.

Indices at a different level of aggregation (3-digit, 4-digit...) are also compiled using the same methodology.

## 10. Uses

(a) The PPI is a leading indicator of the future status of inflation. Movement of PPI is usually indicative of a similar change of part of the CPI. PPI can also be used in the economic analysis of inflation transmission process.
(b) It provides specific price deflators for the computation of national accounts at constant prices in order to measure real growth
(c ) It is helpful in the formulation of contract agreement. It can be used as an escalation clause to protect buyers and sellers against inflation or deflation.
(d) PPI is also used in econometric models, in forecasting and in inventory accounting.

## 11. Missing Prices

In the case of temporarily missing prices for products, the change in the prices will be assumed to be following the same trend as the average price in the 5-digit NSIC group or that at higher level.

## 12. Treatment of Product Permanently Disappeared

Products may disappear permanently for various reasons. The product may disappear from the market because new products have been introduced or the establishments from which the price has been collected have stopped selling the product. When a product disappears permanently, a replacement product of a similar nature will be included in the index.

## 13. Treatment of Quality Change

Existing varieties often decrease in importance or disappear from the market altogether as new varieties appear. The method used to deal with such a situation is the same as that described at paragraph 11 above.

## 14. Reliability of the PPI-M

The statistical accuracy of PPI depends heavily on the quality of information provided by respondents. This office places great emphasis on the need for reporting effective selling prices, i.e. the amount realized by a producer when selling its products on the market inclusive of all discounts and other price deductions rather than the list or catalogue prices.

On the field a system of sample checks is already in place for detecting systematic errors in the collection process. The results are analyzed right on field by analyzing the monthly changes and comparing also the prices those collected at the same month of previous year. Outliers are discussed with the producers to ensure that they are genuine.

At office level, comparisons are made with the CPI and with the import/export price indices. Systematic analyzes of the source data are made in the context of weight and base year revisions that occur every five years.

## 15. Caution

With the changes brought to the methodology and weights of the index figures published in this issue of the ESI on PPI-M and those published earlier are not strictly comparable. For ease of analysis, the series of PPI-M for the manufacturing sector and those for "Manufacture of food and beverages" have been revised backward down to 1999 and given in Table 7.

[^0]:    ${ }^{1}$ The indices for January 1999 to December 2006 originally based on 2003 have been converted to the new base 2007=100
