

National Accounts Estimates (2010 – 2013)

June 2013 issue

1. INTRODUCTION

This issue of Economic and Social Indicators presents National Accounts estimates for the period 2010 to 2013. Concepts and definitions used in the computation of the estimates are given at section 6.3.

2. MAIN AGGREGATES

	2012 ¹	2013 ²
(i) GDP at basic prices (R billion)	302.7	328.7
(ii) GDP growth rate (%)	+3.3	+3.3
(iii) Investment growth rate (%)	-0.8	-0.1
<i>Exclusive of aircraft and marine vessel</i>	-0.8	-3.1
(iv) Investment as a % of GDP	23.0	22.2
<i>Exclusive of aircraft and marine vessel</i>	23.0	21.5
(v) Public sector investment as a % of GDP	5.5	5.0
<i>Exclusive of aircraft and marine vessel</i>	5.5	4.9
(vi) Private sector investment as a % of GDP	17.5	17.2
<i>Exclusive of aircraft and marine vessel</i>	17.5	16.7
(vii) Public sector investment as a % of total investment	24.0	22.5
<i>Exclusive of aircraft and marine vessel</i>	24.0	22.6
(viii) Private sector investment as a % of total investment	76.0	77.5
<i>Exclusive of aircraft and marine vessel</i>	76.0	77.4
(ix) Growth rate of final consumption expenditure (%)	+2.8	+2.8
(x) Gross National Saving as a % of GNDI	14.7	14.4
(xi) Gross National Saving as a % of GDP at market prices	15.1	14.8
(xii) Net exports of goods and services as a % of GDP	-11.9	-12.3

¹Revised

²Forecast

3. HIGHLIGHTS

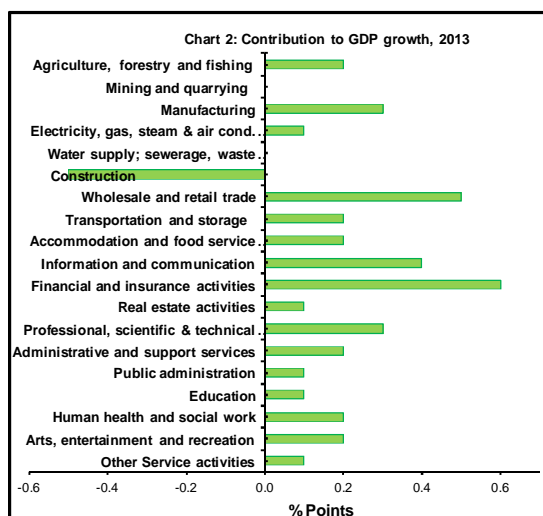

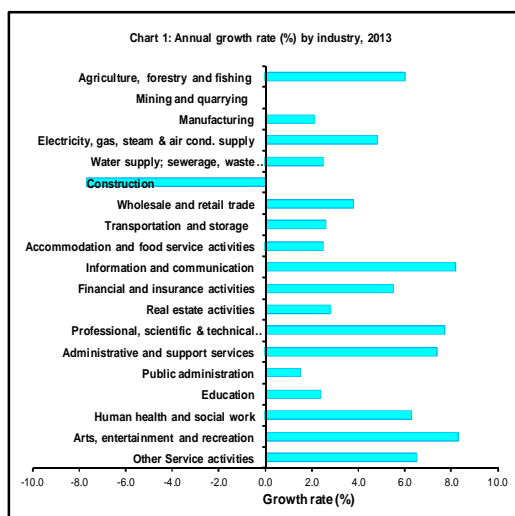

3.1 Gross Domestic Product

Year 2012

GDP grew by 3.3% in 2012 compared to 3.6% in 2011. Exclusive of sugar, the rate worked out to 3.5% compared to 3.6% in 2011.

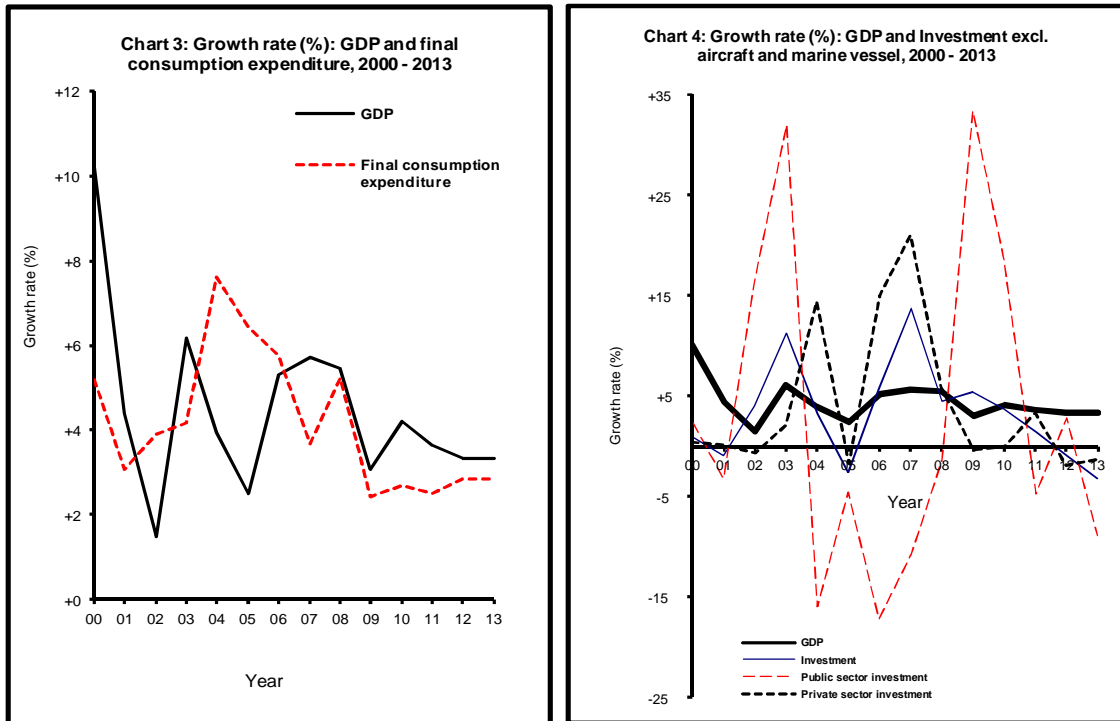

Year 2013

- (i) On the basis of information gathered on key sectors of the economy **GDP in 2013 is forecasted to grow by 3.3%, same as in 2012.** Exclusive of sugar, the rate would be 3.4% lower than the 3.5% in 2012.
- (ii) The main contributors to the 3.3% growth in GDP would be: **“Financial and insurance activities” (0.6 percentage point), “Wholesale & retail trade; repair of motor vehicles and motorcycles” (0.5 percentage point), “Information and communication” (0.4 percentage point) and “Construction” with a negative contribution of 0.5 percentage point.**

3.2 Final consumption expenditure, 2013

Final consumption expenditure would grow by 2.8% in 2013 same as in 2012 (Chart 3).

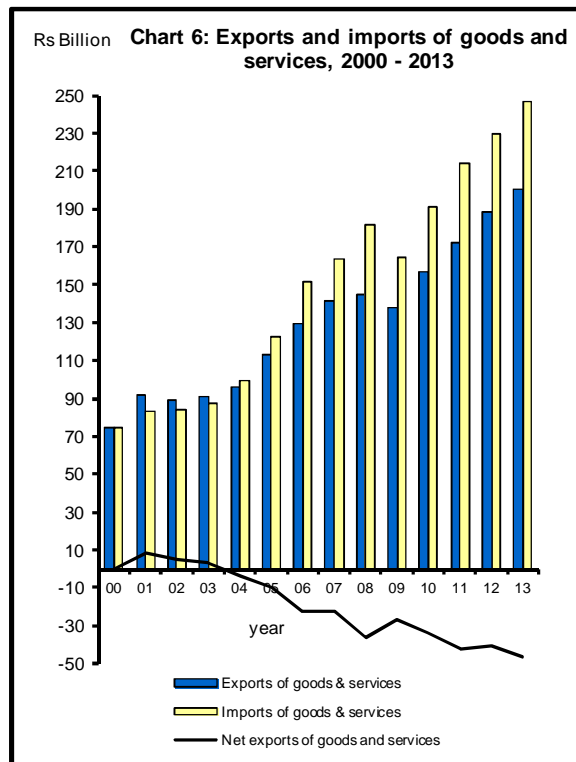

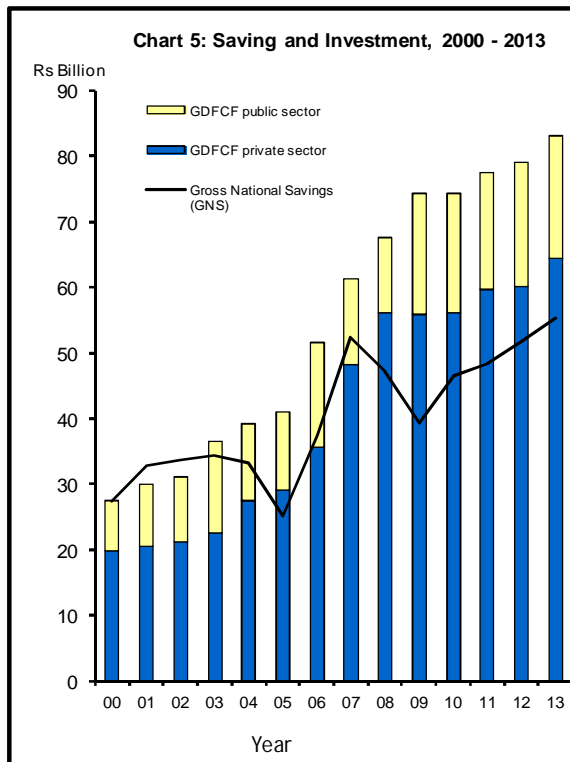

3.3 Saving, 2013

Gross National Saving (GNS) as a % of Gross National Disposable Income (GNDI) would be 14.4% in 2013, compared to 14.7% in 2012. Saving rate defined as the ratio of GNS to GDP at market prices would reach 14.8%, lower than the figure of 15.1% in 2012 (Table 11).

3.4 Investment, 2013

- (i) **Total investment would continue to decline and is expected to contract by -0.1% in 2013** after the -0.8% fall in 2012. However, exclusive of aircraft and marine vessels, a drop of -3.1% is expected compared to -0.8% in 2012.
- (ii) **Private sector investment is expected to rebound by 1.9% in 2013** after the negative growth of -1.9% in 2012. Exclusive of aircraft and marine vessels, investment would decline by -1.3% compared to -1.9% in 2012.
- (iii) **Public sector investment is expected to contract by -6.4% in 2013 after a rebound of 2.9% in 2012.** Excluding aircraft and marine vessels, a decline of -8.8% would be observed compared to a growth of 2.9% in 2012.
- (iv) **Investment rate, defined as the ratio of investment to GDP at market prices would be 22.2% lower than the figure of 23.0% in 2012.** Exclusive of aircraft and marine vessels, the rate would be 21.5% compared to 23.0% in 2012.
- (v) **Private investment rate would decrease to 17.2% from 17.5% in 2012 and that of public investment rate to 5.0% from 5.5%.** Exclusive of aircraft and marine vessels, private investment rate in 2013 would be 16.7% and that of public 4.9%.
- (vi) **The share of the private sector in total investment is expected to increase to 77.5% from 76.0% in 2012** while that of the public sector would decrease to 22.5% from 24.0%. Exclusive of aircraft and marine vessels, the share of private sector investment in 2013 would be 77.4% and that of the public sector 22.6%.

3.5 Net exports of goods and services, 2013

- (i) **Imports of goods and services will grow by 1.5%** in 2013, higher than the 0.7% of 2012. **Exports of goods and services are also expected to grow by 1.5%** but lower than the 4.6% growth registered in 2012.
- (ii) Net exports of goods and services would result in **a deficit representing 12.3% of GDP at market prices, higher than the 2012 figure of 11.9%**.

4. REVISIONS IN THIS ISSUE

4.1 Year 2012

Latest information gathered on the various sectors of the economy indicates that **GDP growth for 2012 was 3.3% same as estimated in March 2013**. However, some changes were noted at industry level and the main changes are:

- (i) **Manufacturing:** a higher growth of 2.2% compared to 1.5%. Within the sector, "food processing" grew by 7.6% instead of 6.6% and "other manufacturing" registered no growth instead of a decline of -1.4%.
- (ii) **Information and communication:** a lower growth of 8.6% instead of 9.0%.
- (iii) **Arts, entertainment and recreation:** a lower growth of 8.5% instead of 8.8%.

4.2 Year 2013

On the basis of information gathered on key sectors of the economy, forecast of GDP growth is revised downwards to 3.3% from 3.5% as forecasted in March 2013.

Exclusive of sugar, the growth rate would be 3.4% compared to 3.7% forecasted earlier.

At industry level, the main changes compared to the forecast made in March 2013 are:

- (i) **Sugarcane:** a growth of 3.2% instead of decline of -3.0%, based on a forecast of 425,000 tonnes of sugar instead of 400,000 tonnes.
- (ii) **Construction:** a deeper decline of -7.7% instead of -6.9% as forecasted earlier. This decline is mainly explained by rescheduling of major road decongestion projects partly offset by investment in land drainage.
- (iii) **Professional, scientific and technical activities:** to grow by 7.7% instead of 7.9%, based on first quarter data.
- (iv) **Accommodation and food service activities:** a lower growth of 2.5% compared to 3.5% based on a forecast of 990,000 tourist arrivals instead of 1 million as forecasted earlier.

5 FORECAST - YEAR 2013

5.1 Gross Domestic Product

On the basis of information gathered on the key sectors of the economy and the performance of the first quarter of year 2013, GDP is expected to grow by around 3.3% in 2013, same as in 2012. Exclusive of sugar, the growth rate would be around 3.4% compared to 3.5% in 2012 (Tables 3 and 6). The main assumptions used are at paragraph 5.2.

GDP at basic prices in 2013 would reach R 328,738 million compared to R 302,667 million in 2012, representing a nominal increase of 8.6%. GDP at market prices would increase by 8.8% to R 374,265 million from R 343,885 million in 2012. Taxes on products (net of subsidies) is expected to increase by around 10.5% to reach R 45,528 million from R 41,218 million in 2012.

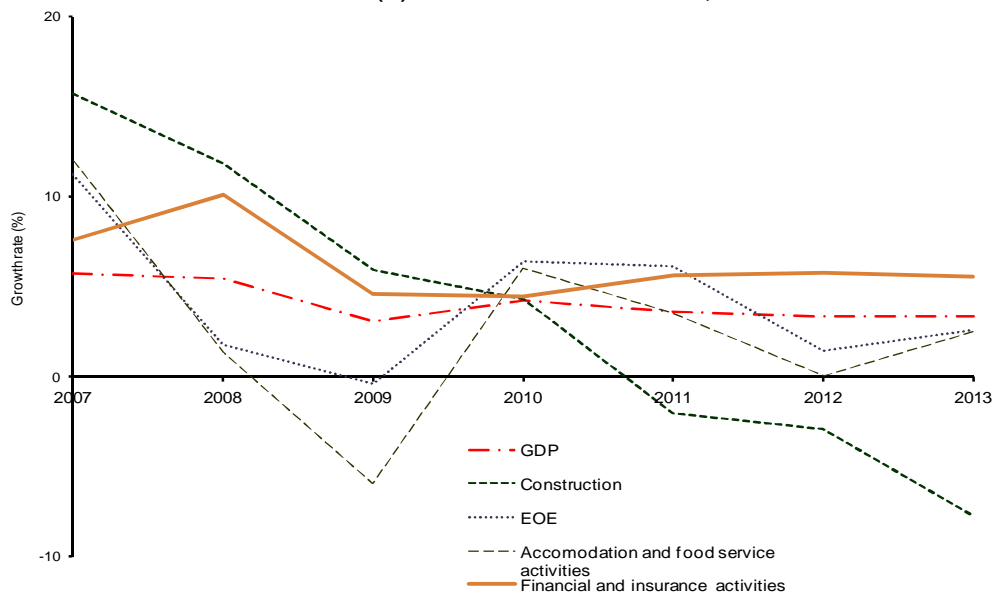

5.2 Growth rate by industry

The main assumptions used for the forecast of 3.3% growth in 2013 are:

- (i) **Sugarcane:** sugar production forecasted at around 425,000 tonnes of refined and special sugars, resulting in a growth of 3.2% compared to a decline of -7.3% in 2012.
- (ii) **Manufacturing:** to expand by 2.1%, slightly lower than the 2.2% growth in 2012. Within the sector,
 - a. "Sugar milling" would grow by 3.2% after a contraction of -6.3% in 2012;
 - b. "Food processing" would grow by 2.2% compared to 7.6% in 2012. The positive growth would be mainly due to a new fish processing plant due to start in the second semester of 2013.
 - c. "Textile manufacturing" would grow at a rate of 2.0% based on the performance of the first quarter of 2013, compared to a decline of -1.1% in 2012.
 - d. "Other manufacturing" to expand by 2.0%, after stagnating in 2012.

Activities of Export Oriented Enterprises (EOE) are expected to grow by 2.6%, higher than the 1.4% growth registered in 2012.
- (iii) **Construction:** to decline further by -7.7% after the contraction of -3.0% in 2012, mostly explained by completion of major projects such as airport extension and shopping complex in 2012 coupled with rescheduling of road decongestion projects.
- (iv) **Accommodation and food service activities:** a growth of around 2.5% based on a forecast of 990,000 tourist arrivals in 2013 compared to 965,441 in 2012. Tourist earnings are forecasted at R 46.1 billion compared to R 44.4 billion in 2012.
- (v) **Information and communication:** to expand by 8.2%, lower than 8.6% in 2012.
- (vi) **Financial and insurance activities:** to grow at a lower rate of 5.5% compared to the growth of 5.7% in 2012.
- (vii) **Other sectors:** growth rates are based on past performance of the first quarter of 2013.

Chart 7: Growth rate (%) - GDP and selected industries, 2007 - 2013

5.3 Consumption and Saving

Gross National Disposable Income (GNDI) is expected to reach R 384,467 million in 2013 compared to R 352,182 million in 2012, representing an increase of 9.2%.

Final consumption expenditure of households and general government is expected to increase by around 9.6% in nominal terms to attain R 329,232 million in 2013 from R 300,385 million in 2012. The real growth rate would be 2.8% in 2013 same as in 2012 (Tables 9 and 10).

Gross National Saving (GNS) would reach R 55,235 million in 2013, from the figure of R 51,796 million in 2012. GNS as a percentage of GNDI would be 14.4 in 2013, compared to 14.7 in 2012. The saving rate measured as the percentage of GNS to GDP at market prices would reach 14.8 in 2013, lower than the figure of 15.1 in 2012 (Table 11).

5.4 Investment

Latest available information on ongoing and new projects indicates that investment in 2013 would reach R 83,051 million, representing an increase of 4.9% in nominal terms over the 2012 figure of R 79,185 million (Tables 9 and 12). In real terms, it would decline by around -0.1% in 2013 compared to -0.8% in 2012. Exclusive of investment on aircraft and marine vessels amounting to R 2,480 million, GDFCF would decline further by -3.1% in 2013 after the -0.8% dip in 2012 (Table 13).

Investment rate would decrease to 22.2% in 2013 from 23.0% in 2012. Exclusive of aircraft and marine vessels, the investment rate would be 21.5% (Table 2).

Investment by type

“Building and construction work” is expected to decline further by -8.5% in 2013 compared to -1.1% in 2012. Within this category, “Non residential building” and “Other construction work” are expected to contract by -15.4% and -27.5% respectively. On the other hand, “Residential building” is expected to recover by 9.1% after contraction of -4.5% in 2012.

“Machinery and equipment” would rebound by 18.0% mostly due to investment in a new fish processing plant and marine vessels, after a fall of -0.2% in 2012. However, excluding on aircraft and marine vessels, the growth would be 8.8% in 2013 compared to a drop of -0.2% in 2012.

Investment by sector

Private sector investment is expected to increase by 7.0% in nominal terms to reach R 64,376 million in 2013 from R 60,175 million in 2012. In real terms, it is expected to grow by 1.9% after a decline of -1.9% in 2012 (Tables 9 and 10). The positive growth would be mainly due to investment in marine vessels and a new fish processing plant.

Public sector investment is forecasted at R 18,675 million in 2013, lower than the investment of R 19,010 million in 2012. After removing the price effect, public sector investment is expected to contract by -6.4% after a rebound of 2.9% in 2012. This decline would be mainly due to completion of major projects such as airport extension coupled with rescheduling of major road decongestion projects.

The share of private sector investment is expected to increase to 77.5% from 76.0% in 2012 and that of the public sector to decrease to 22.5% from 24.0%. Excluding aircraft and marine vessels, the share of private sector investment would be 77.4% and that of the public sector 22.6%

5.5 Imports and exports of goods and services

Imports of goods and services are forecasted at R 246,584 million in 2013 compared to R 229,237 million in 2012, representing a nominal increase of 7.6% (Table 9). In real terms, it would grow by 1.5% compared to 0.7% in 2012. Imports of goods measured on an f.o.b. basis would grow by 2.9%, mainly explained by expected imports of marine vessels. Imports of services, which include insurance and freight paid in respect of imported goods and imports of FISIM, is expected to fall by -1.2% (Table 10).

Exports of goods and services would increase by 6.4% to R 200,446 million in 2013 from R 188,389 million in 2012. In real terms, this would represent a growth of 1.5%. Exports of goods measured on an f.o.b. basis and exports of services (inclusive of FISIM exports) are forecasted to expand by 3.1% and 0.3% respectively (Tables 9 and 10).

Net exports of goods and services would result in a deficit of R 46,138 million in 2013 compared to R 40,848 million in 2012. This would represent 12.3% of GDP at market prices in 2013, higher than the figure of 11.9% in 2012 (Tables 1 and 2).

6. TECHNICAL NOTE

6.1 Release of National Accounts data

Annual National Accounts aggregates are compiled and published in the "Economic and Social Indicators" in March, June, September and December according to an advance calendar posted on the website of Statistics Mauritius (<http://statsmauritius.gov.mu>). This issue covers the period 2010 to 2012. The next issue covering the period 2010 to 2013 will be released as follows:

Issue	Date posted on Website
September 2013	26 September 2013
December 2013	20 December 2013

More detailed statistics on National Accounts are available in the annual Digest of National Accounts published in June. All publications of Statistics Mauritius, including historical series, can be downloaded from the website.

6.2 Revisions policy

Benchmark data for the compilation of annual National Accounts estimates are obtained from the Census of Economic Activities (CEA) which is conducted every five years. For non-census years, the estimates are worked out based on results of quarterly and annual surveys as well as data from administrative sources. These are updated as and when additional information becomes available. Revisions to published series may therefore be made in subsequent issues of the publication.

There will also be occasional major revisions, such as rebasing on results of the quinquennial CEA, methodological changes, and adoption of latest international recommendations. Users will be informed in advance of these major changes while comparable series will be worked out as far back as possible and published.

6.3 Definitions

(i) Gross Domestic Product (GDP)

GDP is the aggregate money value of all goods and services produced within a country out of economic activity during a specified period, usually a year, before provision for the consumption of fixed capital.

(ii) GDP at basic prices

GDP at basic prices is obtained as the difference between output and intermediate consumption whereby output is valued at basic prices and intermediate consumption at purchasers' prices.

The basic price is the amount receivable by the producer exclusive of taxes on products and inclusive of subsidies on products. The equivalent for imported products is the c.i.f. value, i.e. the value at the border of the importing country.

The purchasers' price is the amount payable by the purchaser exclusive of deductible taxes on products (e.g. deductible value added tax).

(iii) GDP at market prices

GDP at market prices is equal to the GDP at basic prices plus taxes (net of subsidies) on products.

(iv) Primary sector

The primary sector comprises "Agriculture, forestry and fishing" and "Mining and quarrying".

(v) Secondary sector

The secondary sector includes "Manufacturing", "Electricity, gas, steam and air conditioning supply", "Water supply; sewerage, waste management and remediation activities" and "Construction".

(vi) Tertiary sector

The tertiary sector includes "Wholesale and retail trade; repair of motor vehicles and motorcycles", "Transportation and storage", "Accommodation and food service activities", "Information and communication", "Financial and insurance activities", "Real estate activities", "Professional, scientific and technical activities", "Administrative and support service activities", "Public administration and defence; compulsory social security", "Education", "Human health and social work", "Arts, entertainment, recreation" and "Other services activities".

(vii) Contribution to GDP growth

The contribution of an industry group to the annual GDP growth is calculated by multiplying the annual growth rate of the group by its relative share of GDP in the previous year.

(viii) Financial intermediation services indirectly measured (FISIM)

FISIM is obtained as the difference between interest received and interest paid by banks excluding those received on own funds. As recommended by the SNA 1993, it has been allocated to users as follows: intermediate consumption of businesses, final consumption of households and government, and a component of exports of services.

(ix) Gross National Income (GNI)

GDP plus net primary income from abroad gives Gross National Income (GNI).

(x) Gross National Disposable Income (GNDI)

Gross National Income (GNI) net of transfers from the rest of the world gives Gross National Disposable Income (GNDI).

(xi) Consumption expenditure

Consumption expenditure is made up of final consumption expenditure of households and of government.

Government final consumption expenditure is further disaggregated into *collective* and *individual* consumption expenditure. *Collective* expenditure consists of the services which government provides to the community as a whole, for example, security and defence whereas *individual* expenditure is made up of expenses incurred in providing services which are mostly beneficial to individuals, mainly in respect of health and education.

(xii) Actual government final consumption expenditure

Actual government final consumption expenditure refers to expenditure incurred for the provision of collective services.

Final consumption expenditure incurred by households comprises the value of goods and services purchased by households including the value of imputed rent of owner occupied dwellings. For a better measure of standard of living, actual private final consumption expenditure is used.

(xiii) Actual final consumption expenditure of households

Actual final consumption expenditure of households covers goods and services supplied to households, irrespective of whether these goods and services are actually paid by government or households themselves. Consequently, it consists of expenditure incurred by households and government on the provision of individual services.

(xiv) Gross National Saving (GNS)

Gross National Disposable Income (GNDI) less total consumption gives Gross National Saving.

(xv) Saving rate

Saving rate is the ratio of GNS to GDP at market prices.

(xvi) Gross Domestic Fixed Capital Formation (GDFCF)

GDFCF is the net additions to the physical assets of the country in a year. These consist mainly of investment in buildings, plants, machinery and transport equipment, all valued at market prices.

(xvii) Investment rate

Investment rate is the ratio of GDFCF to GDP at market prices.

(xviii) Exports and Imports of goods and services

In this publication both exports and imports of goods are measured on an f.o.b. basis. Insurance and freight, which represent the difference between the c.i.f. and f.o.b. values of imports of goods, are recorded as import of services.

Exports and imports of goods are compiled according to the General Trade System, using the national boundary as the statistical frontier. All goods entering the country are recorded in imports and goods leaving the country in exports.

(xix) Change in inventories

Change in inventories includes the value of the physical change in inventories of raw materials, work in progress, and finished goods held by producers.
