

CONSUMER PRICE INDEX

(Base period: January – December 2012 = 100)

1st Quarter 2017

1. INTRODUCTION

This issue of Economic and Social Indicators presents the Consumer Price Index (CPI) for the first quarter 2017. The methodology used for computing the CPI and the inflation rate is given in the technical note at Annex.

2. KEY POINTS

2.1 The overall CPI

The Consumer Price Index, which stood at 109.4 in December 2016, registered a net increase of 3.1 points (or 2.8%) to reach 112.5 in March 2017 (Table 1a).

On a monthly basis, the CPI increased by 0.8 point in January, 1.3 points in February and 1.0 point in March.

2.2 Overview of CPI movements

The main reasons for the net increase in the CPI from December 2016 to March 2017 (Table 2) were:

- (a) higher prices of vegetables (+28.7%), traders' rice (+8.0%), milk (+3.9%), fruits (+4.3%) and some other food products (+1.4%);
- (b) higher prices of ready-made clothing (+2.2%);
- (c) increases in doctors' (+4.6%) and clinical fees (+8.2%);
- (d) higher prices of gasoline (+9.9%) and diesel (+10.0%);
- (e) higher tuition fees (+4.9%);
- (f) higher prices of goods for personal care (+3.0%);
- (g) higher prices of some other goods and services (+0.7%);
partly offset by
- (h) lower prices of air tickets (-9.7%).

3. MOVEMENT OF CPI SUB INDICES

Percentage change in CPI sub indices from December 2016 to March 2017

The changes in the sub-indices (Table 3) for the twelve divisions of consumption expenditure from December 2016 to March 2017 were as follows:

| | |
|---|--|
| <i>Food and non-alcoholic beverages (+6.9%)</i> | The increase of 6.9% was mainly the result of higher prices of vegetables (+28.7%), traders' rice (+8.0%), milk (+3.9%), fruits (+4.3%), cooking oil (+6.3%), fish (+1.2%) and meat (+0.6%). |
| <i>Alcoholic beverages and tobacco (+0.6%)</i> | The increase of 0.6% was due to increases in prices of rum and other cane spirits (+1.0%), beer and stout (+1.1%), whisky (+5.8%) and wine (+2.6%). |
| <i>Clothing and footwear (+1.9%)</i> | The increase of 1.9% was mainly due to price increases in some ready-made clothing (+2.2%) and footwear (+1.1%). |
| <i>Housing, water, electricity, gas and other fuels (-0.1%)</i> | The decrease of 0.1% was mainly due to lower interest rates on housing loan (-1.4%). |
| <i>Furnishings, household equipment and routine household maintenance (+1.4%)</i> | The increase of 1.4% was mainly due to higher prices of washing materials and softeners (+2.5%) and some major household appliances (+3.0%). |
| <i>Health (+3.8%)</i> | The increase of 3.8% was mainly the effect of higher doctors' (+4.6%) and clinical fees (+8.2%). |
| <i>Transport (+2.0%)</i> | The increase of 2.0% was mainly due to higher prices of gasoline (+9.9%) and diesel (+10.0%), partly offset by lower prices of air tickets (-9.7%). |
| <i>Communication (-0.2%)</i> | The decrease of 0.2% was mainly due to lower prices of mobile phones (-2.0%). |
| <i>Recreation and culture (+1.1%)</i> | The increase of 1.1% was mainly the result of higher prices of textbooks (+1.8%), toys and games (+7.1%), and recreational and sporting services (+14.9%). |
| <i>Education (+2.5%)</i> | The increase of 2.5% was mainly the effect of higher tuition fees (+4.9%) and university fees (+0.7%). |
| <i>Restaurants and hotels (+0.8%)</i> | The increase of 0.8% was mainly due to higher prices of prepared foods (+1.5%), and cakes and snacks (+3.3%). |
| <i>Miscellaneous goods and services (+2.5%)</i> | The increase of 2.5% was mainly attributable to price increases of goods for personal care (+3.0%) and home insurance (+12.5%). |

4. INFLATION RATE

The headline inflation rate was 1.0% for year 2016 compared to 1.3% for year 2015 (Table 5).

The headline inflation rate excluding 'Alcoholic beverages and tobacco' was 0.2% for year 2016 compared to 1.2% for year 2015.

The headline inflation rate for the twelve months ending March 2017 works out to 1.3% compared to 0.9% for the twelve months ending March 2016.

The headline inflation rate excluding 'Alcoholic beverages and tobacco' for the twelve months ending March 2017 works out to 0.2% compared to 0.7% for the twelve months ending March 2016.

5. INTERNATIONAL COMPARISON OF INFLATION RATE

The table below compares the inflation rate (as measured by the percentage change in the average CPI for a given year relative to the previous year) of Mauritius with those of our main importing countries and some countries in the region for the year 2016.

Inflation rate (%) of selected countries, year 2016

| Country | Inflation rate (%) | Country | Inflation rate (%) |
|----------------|---------------------------|------------------|---------------------------|
| France | 0.2 | Australia | 1.3 |
| United Kingdom | 0.6 | United States | 1.3 |
| China | 2.0 | Botswana | 3.0 |
| India | 5.0 | Mauritius | 1.0 |
| Japan | -0.1 | Seychelles | -1.0 |
| Singapore | -0.5 | South Africa | 6.6 |

Technical note

1. Methodology used for the computation of the Consumer Price Index (Base period: January - December 2012 = 100)

(a) Definition

The **Consumer Price Index** (CPI) is an indicator of changes over time in the general level of prices of goods and services acquired by Mauritian consumers.

(b) Measurement of the CPI

The CPI measures price change by comparing, through time, the cost of a fixed basket of goods and services. As prices vary over time, the total cost of the basket also changes and thus the CPI measures the change in the cost of this basket. It provides a way to compare what this basket costs at a given period relative to a reference or base period.

The cost of the CPI basket is assigned a value of 100 in the base period and the costs in other periods are expressed as percentage changes compared to the base period. For example, if the CPI is 110, this means that there has been an increase of 10% in the cost of the basket since the base year; similarly an index of 90 means a 10% decrease in the cost of the basket.

(c) The CPI basket

The CPI basket is based on the expenditures of private households in a reference period, currently January to December 2012. The composition of the current CPI basket has been derived from the 2012 Household Budget Survey (HBS) data. It has been determined in accordance with latest ILO and SADC recommendations.

The items constituting the basket have been selected on the basis of the importance of household consumption expenditure on them. The basket includes all important items on which consumption expenditure is significant, i.e. accounting for around 0.1% or more of total household consumption expenditure. Each item's relative importance, which is called the "weight" (usually expressed on a total of 1000), is the expenditure share of the item. Non-consumption items such as income tax, social security contributions, purchase of land, shares and life insurance are excluded.

The commodities in the basket are classified according to the UN COICOP (Classification of Consumption Expenditure according to Purpose) with 12 divisions, 42 groups and 80 classes.

(d) Price coverage

The prices used in the CPI calculation are those that any member of the public would have to pay to purchase the specified goods or services. Any taxes on products attached to the goods are included.

Price collection is done on a regular basis. Each month, around 7,800 price quotations are collected in respect of 1,020 item indicators from some 500 outlets selected to be representative of regions across the islands of Mauritius and Rodrigues.

Prices of non-perishable items are collected monthly in the nine geographical districts of the island of Mauritius and in Rodrigues.

Prices of fresh fruits, vegetables, meat and fish are collected on a weekly basis from 9 markets in Port Louis, Rose Hill, Quatre Bornes, Vacoas, Mahebourg, Flacq, Goodlands, Pamplemousses and Port Mathurin.

Information on rent is obtained from a quarterly rent survey of some 100 rented dwellings.

(e) Formula for computation of the CPI

The CPI is computed according to the Laspeyres Formula as a weighted average of price relatives of individual items. The weights are fixed and correspond to the base period expenditures. The Laspeyres Index measures the cost of a basket of goods and services at different points in time, relative to the cost of the same basket in the base period.

The formula used for computing the CPI at time t is

$$I_t = \frac{\sum W_i (P_{it} / P_{i0})}{\sum W_i} \times 100$$

where,

- I_t : CPI for period t with reference to a base period 0
 P_{i0} : Price of item i at time 0, i.e. during base period
 P_{it} : Price of item i at time t
 W_i : Weight of item i

The base period is January to December 2012, the period during which the latest HBS was conducted.

2. Inflation

(a) Definition of Inflation

Inflation is the percentage change in the level of prices (as measured by the CPI) from one period to another.

(b) Calculating the Inflation Rate

The headline inflation rate in Mauritius, like in many other countries, is calculated by using the annual average method, i.e. by comparing the average level of prices during a twelve-month period with the average level during the corresponding previous twelve-month period. This type of inflation rate is more appropriate for adjusting wages, salaries and pensions to compensate for loss of purchasing power. *All inflation rates presented in this publication relate to the headline inflation.*

Another commonly used method of calculating the inflation rate is the so called ‘year-on-year’ method. The year-on-year inflation rate is calculated as the percentage change in the CPI for a given month with respect to the CPI for the corresponding month of the previous year. It is generally used by central banks for monetary policy decisions. Year-on-year inflation rates are not presented in this publication but can be easily calculated through the available monthly CPI.

Note: More information about the concept, computation and use of the CPI is available online in the publication “HBS 2012 and updated CPI” <http://statsmauritius.govmu.org/English/CensusandSurveys/Documents/HBS%20Methodology/Methodological%20Report%20HBS12.pdf>
