

# CONSUMER PRICE INDEX

(Base period: January – December 2017 = 100)

3<sup>rd</sup> Quarter 2021

## 1. INTRODUCTION

This issue of Economic and Social Indicators presents the Consumer Price Index (CPI) for the third quarter 2021. The methodology used for computing CPI and inflation rate is given in the technical note at Annex.

## 2. KEY POINTS

### 2.1 Overall CPI

The Consumer Price Index, which stood at 111.4 in June 2021, registered a net increase of 0.3 point (or 0.3%) to reach 111.7 in September 2021 (Table 1A).

The monthly changes were as follows: July (+0.3 point), August (-0.1 point) and September (+0.1 point).

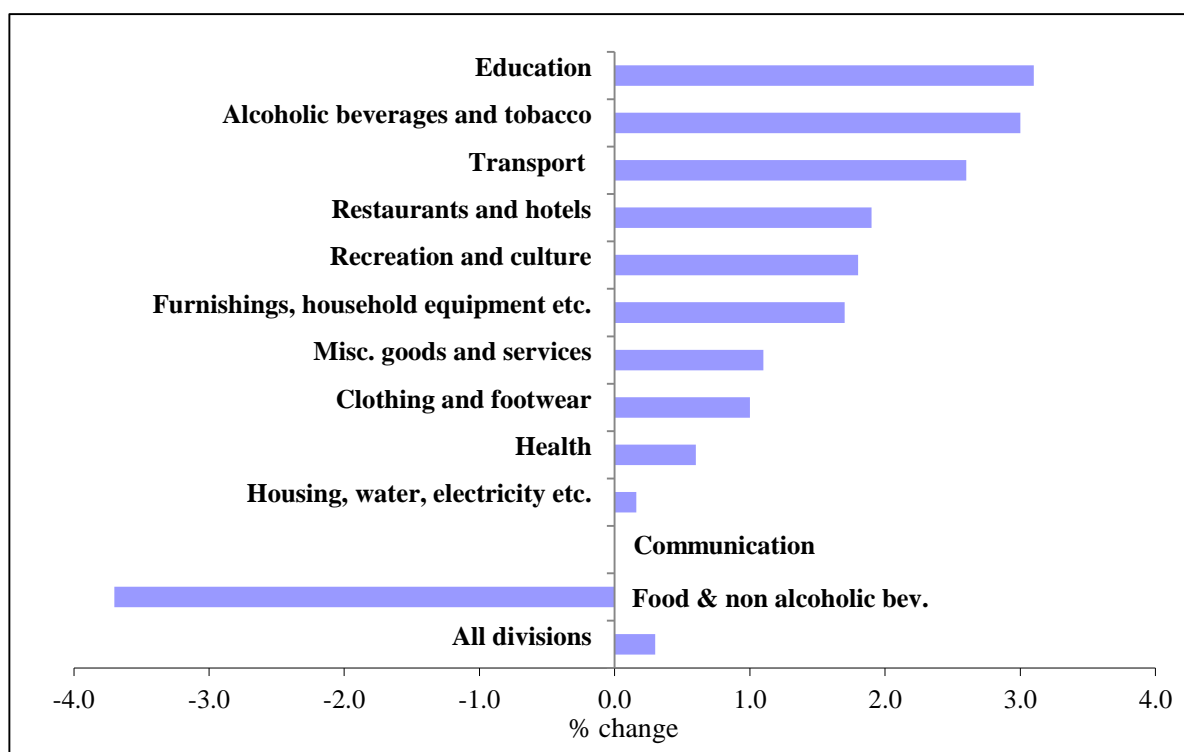

### 2.2 Overview of CPI movements

The main contributors for the net increase in CPI from June to September 2021 (Table 2) were:

- (a) higher prices of meat (+0.1 point) and other food products (+0.1 point);
- (b) higher prices of cigarettes (+0.2 point), beer and stout (+0.1 point) and rum and other cane spirits (+0.1 point);
- (c) higher prices of gasoline (+0.2 point) and motor vehicles (+0.2 point);
- (d) higher university fees in private institutions (+0.2 point), prepared foods (+0.1 point) and some other goods and services (+0.3 point);  
partly offset by
- (e) lower prices of vegetables (-1.1 points), culinary herbs (-0.1 point) and fish (-0.1 point).

## 3. MOVEMENT OF CPI SUB INDICES

Percentage change in CPI sub-indices from June to September 2021

The changes in the sub-indices (Table 3) for the twelve divisions of consumption expenditure from June to September 2021 were as follows:

<u>Division of consumption expenditure</u>	<u>Main contributors to change</u>
<i>Food and non-alcoholic beverages (-3.7%)</i>	Lower prices of vegetables (-19.6%), culinary herbs (-31.4%), fish (-2.4%), pulses (-15.1%), ginger (-26.0%), cheese (-5.9%), margarine and ghee (-6.7%), ice cream and sweets (-2.8%), cooking oil (-0.6%) and flour (-1.9%), partly mitigated by higher prices of meat (+2.5%), fruits (+2.9%), other prepared food (+5.3%), milk preparations (+8.3%) and some frozen semi-prepared foods (+4.4%).
<i>Alcoholic beverages and tobacco (+3.0%)</i>	Higher prices of cigarettes (+2.7%), beer and stout (+2.9%), rum and other cane spirits (+4.4%), whisky (+2.3%) and wine (+3.7%).
<i>Clothing and footwear (+1.0%)</i>	Higher prices of some ready-made clothing (+0.8%) and footwear (+1.8%).
<i>Housing, water, electricity, gas and other fuels (+0.2%)</i>	Higher prices of materials for the maintenance and repair of dwellings (+3.4%).
<i>Furnishings, household equipment and routine household maintenance (+1.7%)</i>	Higher prices of some other non-durable supplies (+10.2%), some major household appliances (+2.4%) and furniture (+1.7%).
<i>Health (+0.6%)</i>	Higher prices of some medicinal products (+1.8%) and other medical products (+8.1%).
<i>Transport (+2.6%)</i>	Higher prices of gasoline (+4.8%) and motor vehicles (+2.8%).
<i>Communication</i>	Unchanged.
<i>Recreation and culture (+1.8%)</i>	Higher prices of newspapers and magazines (+6.2%), pet foods (+7.8%), private TV subscription fees (+1.0%), stationery (+2.7%) and audio visual equipment (+1.7%).
<i>Education (+3.1%)</i>	Higher university fees in private institutions (+4.9%).
<i>Restaurants and hotels (+1.9%)</i>	Higher prices of some prepared foods (+2.3%).
<i>Miscellaneous goods and services (+1.1%)</i>	Higher charges for religious and funerary good and services (+19.8%) and higher prices of goods for personal care (+1.3%).

#### 4. INFLATION RATE

The headline inflation rate was 2.5% for year 2020, compared to 0.5% for year 2019 (Table 5). On the basis of trends in previous years and recent price changes, the headline inflation rate for calendar year 2021 is forecasted at around 4.0%, compared to 2.5% in 2020.

The headline inflation rate excluding 'Alcoholic beverages and tobacco' was 2.7% for year 2020, compared to 0.4% for year 2019.

The headline inflation rate for the twelve months ending September 2021 worked out to 3.2%, compared to 1.9% for the twelve months ending September 2020.

The headline inflation rate excluding “Alcoholic beverages and tobacco” for the twelve months ending September 2021 worked out to 3.0%, compared to 2.0% for the twelve months ending September 2020.

#### 5. INTERNATIONAL COMPARISON OF INFLATION RATE

The table below compares inflation rate (as measured by the percentage change in the average CPI for a given year relative to the previous year) of Mauritius with those of our main importing countries and some countries in the region for year 2020.

**Inflation rate (%) of selected countries, year 2020**

Country	Inflation rate (%)
France	0.5
United Kingdom	0.9
China	2.4
India	6.2
Japan	0.0
Singapore	-0.2
Australia	0.9
United States	1.2
Botswana	2.0
<b>Mauritius</b>	<b>2.5</b>
Seychelles	1.2
South Africa	3.3

## Technical note

### 1. Methodology used for the computation of the Consumer Price Index (Base period: January - December 2017 = 100)

#### (a) Definition

The **Consumer Price Index** (CPI) is an indicator of changes over time in the general level of prices of goods and services acquired by Mauritian consumers.

#### (b) Measurement of the CPI

The CPI measures price change by comparing, through time, the cost of a fixed basket of goods and services. As prices vary over time, the total cost of the basket also changes and thus the CPI measures the change in the cost of this basket. It provides a way to compare what this basket costs at a given period relative to a reference or base period.

The cost of the CPI basket is assigned a value of 100 in the base period and the costs in other periods are expressed as percentage changes compared to the base period. For example, if the CPI is 110, this means that there has been an increase of 10% in the cost of the basket since the base year; similarly an index of 90 means a 10% decrease in the cost of the basket.

#### (c) The CPI basket

The CPI basket is based on the expenditures of private households in a reference period, currently January to December 2017. The composition of the current CPI basket has been derived from the 2017 Household Budget Survey (HBS) data. It has been determined in accordance with latest ILO and SADC recommendations.

The items constituting the basket have been selected on the basis of the importance of household consumption expenditure on them. The basket includes all important items on which consumption expenditure is significant, i.e. accounting for around 0.1% or more of total household consumption expenditure. Each item's relative importance, which is called the "weight" (usually expressed on a total of 1000), is the expenditure share of the item. Non-consumption items such as income tax, social security contributions, purchase of land, shares and life insurance are excluded.

The commodities in the basket are classified according to the UN COICOP (Classification of Consumption Expenditure according to Purpose) with 12 divisions, 42 groups and 80 classes.

#### (d) Price coverage

The prices used in the CPI calculation are those that any member of the public would have to pay to purchase the specified goods or services. Any taxes on products attached to the goods are included.

Price collection is done on a regular basis. Each month, around 8,000 price quotations are collected in respect of 1,093 item indicators from some 520 outlets selected to be representative of regions across the islands of Mauritius and Rodrigues.

Prices of non-perishable items are collected monthly in the nine geographical districts of the island of Mauritius and in Rodrigues.

Prices of fresh fruits, vegetables, meat and fish are collected on a weekly basis from 9 markets in Port Louis, Rose Hill, Quatre Bornes, Vacoas, Mahebourg, Flacq, Goodlands, Pamplemousses and Port Mathurin.

Information on rent is obtained from a quarterly rent survey of some 100 rented dwellings.

(e) Formula for computation of the CPI

The CPI is computed according to the Laspeyres Formula as a weighted average of price relatives of individual items. The weights are fixed and correspond to the base period expenditures. The Laspeyres Index measures the cost of a basket of goods and services at different points in time, relative to the cost of the same basket in the base period.

The formula used for computing the CPI at time  $t$  is

$$I_t = \frac{\sum W_i (P_{it} / P_{i0})}{\sum W_i} \times 100$$

where,

$I_t$  : CPI for period  $t$  with reference to a base period 0

$P_{i0}$  : Price of item  $i$  at time 0, i.e. during base period

$P_{it}$  : Price of item  $i$  at time  $t$

$W_i$  : Weight of item  $i$

The base period is January to December 2017, the period during which the latest HBS was conducted.

## 2. Inflation

(a) Definition of Inflation

Inflation is the percentage change in the level of prices (as measured by the CPI) from one period to another.

(b) Calculating the Inflation Rate

The headline inflation rate in Mauritius, like in many other countries, is calculated by using the annual average method, i.e. by comparing the average level of prices during a twelve-month period with the average level during the corresponding previous twelve-month period. This type of inflation rate is more appropriate for adjusting wages, salaries and pensions to compensate for loss

of purchasing power. *All inflation rates presented in this publication relate to the headline inflation.*

Another commonly used method of calculating the inflation rate is the so called ‘year-on-year’ method. The year-on-year inflation rate is calculated as the percentage change in the CPI for a given month with respect to the CPI for the corresponding month of the previous year. It is generally used by central banks for monetary policy decisions. Year-on-year inflation rates are not presented in this publication but can be easily calculated through the available monthly CPI.

Note: More information about the concept, computation and use of the CPI is available online in the publication [‘HBS 2017 Methodological Report and updated CPI’](#)
